

News from the Rio Grande.

There appears to be no little anxiety in the community to receive late intelligence from the war quarter. We are very desirous to ascertain the fate of Matamoros.

The War and our Foreign Relations.

The official paper of the government at Washington states that the war with Mexico will be prosecuted on the broadest and widest scale, up to the very "Halls of the Montezumas," until Mexico shall be brought to terms.

But if we have no faith in the statements or predictions of the organ, we place some confidence in the common sense of the President and the Cabinet. They must see the necessity of prosecuting this war with spirit and energy, until it is brought to a successful and early termination.

Unless these views animate the President and the administration, they will soon get into one of the most uncomfortable dilemmas and complications of difficulties that ever men were in.

DEATH OF GANSEVOORT MELVILLE, ESQ.—

We regret to record the death of Gansevoort Melville, the Secretary of the American Legation in London. Mr. Melville was thought a great deal of by his family and his friends in this city, where he was well known and much esteemed.

THE VACANCY OCCASIONED BY THE DECESS OF MR. MELVILLE, no doubt, be soon filled; and when the death of Mr. Melville is known, no less than fifty applicants will be on their way to the President to pester him for the office.

THE RANK AND FILE OF THE AMERICAN ARMY.—Why does Congress not do something besides tendering thanks to the army on the Rio Grande?

AGGRESSION ON THE HIGH SEAS.—FUNKY INCIDENT, and YANKEE PLUCK.—We learn that the schooner Catharine, Capt. Scott, arrived yesterday from St. Jago de Cuba, met with a strange incident on her voyage hither.

THE PARTICULARS OF THE AFFAIR are as follows:—On the morning of sailing from St. Jago, and within gun-shot of the schooner Catharine, from St. Domingo, bound in, she passed at a considerable distance, and not much nearer than she was to the other vessel which had come out in company.

THE WIND was very light from the eastward; the schooner was kept on her course, pointing to the east and the crew continued their work of washing decks, which they had been engaged in. At last, after some words of conclusion on both sides, the spigoly was offered and the salutation made.

THE LANGUAGE first used by the captain of the steamer was broken English, afterwards the conversation with the lieutenant and his men was in French. After the C. had passed the Moro, her flag had been hoisted down, so that the gun topest might be set, which it interfered with.

THE STEAMER was very light from the eastward; the schooner was kept on her course, pointing to the east and the crew continued their work of washing decks, which they had been engaged in. At last, after some words of conclusion on both sides, the spigoly was offered and the salutation made.

Matamoros—The Rio Grande.

The actual wealth realized in Mexico, like that of British India, has been grossly exaggerated. There is no doubt that the mineral resources are vast and almost inexhaustible.

AT THE TIME that Cortes landed in Mexico, the people were well acquainted with the mineral treasures of the country. The mines of Zacatecas, silver, lead and tin, and copper was found in the mountains of Zacatecas.

THE PROFITS OF THE GUANAHUATO MINES for last Feb. amounted to about \$500,000. Balano Mines, \$400,000. Rio del Monte, \$7,418,000.

TIN, LEAD, IRON AND COPPER abound in vast quantities under the surface in northern Mexico, and it requires but enterprise and capital, and a security for property and person, to work the mines to great advantage.

DURING THE CENTURY after the conquest, gold was found in abundance in the mines of Tehuantepec and silver in Zacatecas. In 1804, there were upwards of 8000 mines of all minerals in Mexico.

THE MINE OF REAL DE MONTE was discovered in 1824, and it was with great difficulty he could at first procure sufficient to mix with copper, for the purpose of founding cannon.
