

CHOLERA

The Steamship Franklin's Passengers and the Death of Yesterday.

Eight New Cases Sent to the West Bank Hospital.

No Danger of the Disease Spreading.

The terror which Asiatic cholera, inspires, the undoubtedly mortality which follows, in its train, the reputation of its ravages, and the fact, too well founded, perhaps, of seeing it, acclimated in sections, explains the interest, sufficiently well known, to the appearance of this epidemic in the world, and accounts for the multiplicity of laborers which have fallen to the lot of medical men to check its ravages. It has also been the occasion of innumerable writings, and the literature which this disease has developed it would be almost in vain here to note, as a list of the authors of such works would be almost the standard authorities of the science of medicine in every nation and in every tongue.

On the year 1817 this dread scourge rested in the United States, to which it was indigenous, but the phenomena of cholera entering its character, leaving its old locations and traversing the world, originating from the borders of the Ganges to the Alps and infecting the hearts of the capitals of England and France and then extending its ravages to our own land and homes.

In 1832, 1840, 1854, 1866-66 thousands succumbed to the terrible disease in this city, and those visitations of the malady, particularly the last, fresh in the minds of our citizens, were such as to leave the entire population in that state as to again dread its approach, however slight may be the nature of the preliminary warning. Thus the arrival in our harbor on Sunday last of the steamship Franklin, of the Baltic Lloyd, from ports on the Baltic Sea, with several hundred passengers, and a large percentage of them dead or dying with cholera, when reported yesterday, created considerable consternation throughout the city. Although the dire infection has made sad havoc among the steerage passengers of this vessel and many more may be because of their being past medical aid when the skill and science of our quarantine officials were brought to bear on the infected steamer, it is gratifying to note thus early that it will hardly extend to the

METROPOLITAN HEALTH DISTRICT, as none of the sick can escape while under quarantine to bring the disease into our midst. The greatest vigilance has been manifested not only to prevent cholera from spreading, but also to prevent the sick who have received the most prompt attention and discriminating treatment, and the well passengers comfortably quartered on board the large steamship Delaware, where the passengers are more than satisfied to be out of the terrible focus of infection and under the beneficial influence of quarantine.

Since yesterday's report in the HERALD that two deaths had occurred, and these were members of one family, Lorn Nelson (father), fifty-five years, and his daughter, Henri, thirty-one years, the disease and death that have befallen this interesting family of Danes.

There have been ten other cases of this frightful disease reported at the Health Department since Saturday last, making a total increase of that number of those suffering from the disease in this city. The subject is to come up to-day in the Board of Health, when the cause of the presence of the disease among the inhabitants of this island will be discussed. The several members of the Sanitary Committee felt hopeful yesterday that the necessary precautions for the prevention of the disease would be taken to stop the growth of the pestilence.

THE EDITOR OF THE HERALD: From the report of what transpired in the Board of Health, it seems to be the apprehension of an alarming increase of smallpox in our large cities, as centres, this disease, from the convenience of travel, readily finds its way into country towns. Yesterday one of the members called the attention of the Board of Health to this matter, without recommending any means to arrest its progress. The only prevention of the infectious disease is to be found in vaccination—not with virus from the human subject, but from the cow.

THE DISSEMINATION OF THE DISEASE: The Board of Health reported yesterday a number of cases of smallpox last week, 49, showing a falling off from the previous week of 85 cases. The number of cases in the Twentieth ward numbered 78, a decrease of 28. The total number of cases for the year was 2,726, number of deaths, 476.

DINNER OF THE MEDICAL ALUMNI.

The reunion dinner of the medical department of the University of the City of New York came off last evening at Delmonico's, corner of Fourteenth street and Fifth avenue. The 600 of the medical profession of this and other cities were present. Among those present were: Howard Crosby, Chancellor of the University; Professor John W. Draper, Attorney at Law; Colonel John Moore, United States Army; Professor Weiss and others. Surgeon General Hammond was unavoidably absent. Dr. Lente presided. The President of the evening acted as secretary. The toast of the evening were: "The University of the City of New York—Fond of her past and proud of her present." The toast was received with much applause. The evening was a most successful one.

ATLANTIC MAIL STEAMSHIP COMPANY—ELECTION OF OFFICERS.

At a meeting of the stockholders of the Atlantic Mail Steamship Company yesterday, at the office of the company, No. 3 Bowling Green, the following officers were elected directors for the year ensuing: Samuel G. Wheeler, Jr., Edward Johnson, Loyal B. Pond, Charles F. Davenport, George P. Smith, Archibald M. Smith and Anthony M. Bliss. At a subsequent meeting of the directors the present officers of the company were re-elected as follows: A. W. Himeok, President; Charles F. Davenport, Vice-President; J. J. Quinard, Treasurer; J. O. Baker, Secretary.

MINNESOTA ELECTION.

The official returns of the late election are not yet all in, but enough have been received to show that Governor Austin will have a majority of about one thousand three hundred. The Legislature stands on a joint ballot, one hundred republicans and fifty-five democrats.

THE STORM OF YESTERDAY.

Very driving rain storm prevailed all day yesterday, the water coming down almost continuously from the early hours of the morning until the early hours of to-day, and a strong southeast gale, which swept up the coast, "sprung" hats and matted away with them, and, in addition, produced a wearysome burden and a hopeless struggle, co-operated heartily with the rain to render the day one of extraordinary discomfort, in which, indeed, no happiness could be found, except in lounging upon a couch and reading new novels. The telegraph wires in every direction were downed, and very little telegraphic matter was received from any quarter.

The Storm in New Jersey.

On the Jersey flats last evening the water formed across a lake. Travel by foot to the hills from Jersey City and Hoboken was impossible, the roads being covered at some points with two feet of water. In the ferry houses the gas lamps could not be kept lighted, and the bridges were heaved to an unusual height, the tide being swept in by a violent and steady gale from the southwest. On the river the boats rocked heavily, disturbing the equilibrium of many passengers, who were so frightened that they fled to the shore, and the streets of Jersey City and Hoboken were deserted, and scarcely a sound could be heard, save the growl of the wind and the occasional clatter of the horse car, giving the clues a most dismal appearance. So far, no serious accident has occurred, but it is probably a matter of time before the waves, which seldom reach such a height, no inconvenience can result to the passengers, however, inasmuch as the ferry company has prepared plans to form a new walk whenever the tide submerges the usual one. Umbrellas were of little avail, and those individuals who were not so fortunate as to have received a soaking which no internal application of larger beer or lightning could counteract. The rain, which was so heavy, was frequently washed off the roofs, and thoroughly cleaned the streets and hillsides, discharging a heavy quantity of sand from the thoroughfares to the flood in the swampy districts.

HANNIBAL AND ST. JOSEPH RAILROAD.

The new board of directors of this railroad corporation held a meeting yesterday and elected the following officers:—Henry N. Smith, President; Benjamin F. Carver, Vice-President. John P. Acker was chosen Fiscal Agent. The office is to be transferred from Boston to New York. Jay Gould was chosen a director. The directors will meet again on the 15th. This new organization, it is thought, will have the effect to advance the stock.

FIGHT FOR A SENATORSHIP.

In the First Senatorial district of this State—Richmond, Queens and Suffolk counties—Gilbert C. Deane, the republican candidate, was beaten by Thomas H. Hunt, the democrat. Deane's friends assert that his defeat was due to the fact that he was on the ground that fraud was committed in Loud Island City, Oyster Bay and North Hempstead. Deane's friends say they have the proof, and that they are encouraged by assurances of support from many republican Senators elect.

ALLEGED PLOTTING ARRESTED.

Last night Detectives Hellebrand and Clapp, of the Central Office, arrested William Casson, George Clark and Henry Gibson, on an Eighth Avenue street, whom they detected in the act of picking the pockets of one of the pass-ers. They were locked up at Police Headquarters, and will be arraigned at the Tombs this morning.

FIRE IN LAIGHT STREET.

At about half-past one o'clock yesterday morning a fire was discovered on the third floor of the building corner of St. John's Lane and Laight street. It was damaged to the extent of about \$1,100. The fire was first discovered in the ceiling under the stove on the third floor.
