

MRS. BECKER OPPOSES PROGRESS.

'Do you think I'm a tarlatan fool?' said Mrs. Becker to her nephew who was telling her about the wonders of the telephone and the phonograph.

'But I'm ashamed of myself, Heskiah Bidaker, to set with a face like a deacon in class meeting and tell such outlandish lies?' 'I don't know nothing about science, as you call it, but I reckon I've got common sense, and I wouldn't believe it if you was to get up and swear to it on a stack of Bibles as big as this house, that anybody could speak loud enough to be heard six hundred miles with the wind against him, and as for winding up the speech of people into a machine and then getting it out again whenever you want to, by just turning a little crank, I would not believe it, no, not if you was to turn black in the face a talking it.'

'But it's all true, aunt, every word you said to me, and I can read it to you in the paper,' protested the young man. 'It's the greatest discovery of the age, and everybody is fairly going wild over it.'

'Heskiah! Now tell me, ain't you foolish?' 'Is it really there in plain letters and spelling?' 'Yes, aunt, and here's a picture of the machine.'

'Let's see,' and the old lady took the paper and looked long and carefully at the cut of the phonograph. 'It may be, but it looks like a patent churn. Read what it says about it.'

The young man read the account carefully, while she kept a close watch on him to see that he was not making it up as he went along.

'Now, aunt, what do you think? Ain't it just as I told you? Only think—a person's voice may be heard years and years after they are dead,' exclaimed the youth with enthusiasm.

'Well, if all that is there in print I suppose that there must be something in it, but I want to tell you, yes, what my candid opinion is about it. It's the doings of Satan, and there won't no good come out of it for nobody. It's the work of the old boy, and will make mischief for all them that has anything to do with it, sure. I've heard he'd been turned loose for a thousand years and now I believe it. Dear me! what's to become of us all? Why, I wouldn't have one of them machines in the house when I'm overhauling a doctor for his shortcomings, no, not for any money. Landakes! What lots of devilment there is in the world lately, to be sure! Come to think of it, I honestly believe that concern has been got up on purpose so that no poor woman could have her say any more with any peace or comfort. What's to hinder these newspaper folks from slipping into the house and rigging one of 'em up alongside of the gas-meter. But I don't care, I'll keep on giving Becker a piece of my mind whenever I think he needs it, if it breaks every cog in the box.'

AMBIGUOUS AMUSEMENT. The German method of managing the pleasant play of philopena is as follows: When a couple meet after eating philopena together no advantage is taken of the other until one of them pronounces the word 'philopena.' This is the warning—now the sport is to begin.

Let us suppose that a gentleman calls upon a lady. She invites him to walk in, and at the same time speaks the tallemantic word. If he accepts the offer to walk in he is lost, unless she removes the ban by telling him to go away.

HEAT OF THE SUN.

We can measure the quantity of heat that the sun constantly emits, because we can measure the amount received by our earth, which intercepts about the 2,300,000,000 part of all the light and heat emitted by the sun. We thus find that in every second of time the sun emits as much heat as would result from the combustion of 11,900,000,000 tons of coal. In passing, it may be convenient to notice that each portion of the sun's surface as large as our earth emits as much heat per second as would result from the combustion of 1,000,000,000 tons of coal—a simple and easily remembered relation. Now it is easily calculated from this that if the sun's whole mass consisted of coal, and could burn right out to the last ton, maintaining till then the present rate of emission, the supply would not last more than 5,000 years. As the sun has most certainly been emitting light and heat for a far longer period than this, the idea that the solar fire thus maintained is, of course, altogether untenable. There are, however, many other reasons for rejecting the idea that the sun is composed of burning matter, using the word 'burning' in its proper sense, according to which a piece of coal in a fire is burning, whereas a piece of red-hot iron is not burning, though burning hot. In like manner, we find ourselves compelled to reject the belief that the sun may be a body raised from some remote epoch to an intense heat throughout its entire mass, and gradually cooling. For we find that in the course of a few thousand years such a mass would cool far more than such a mass has cooled (if he has cooled appreciably at all) even within the historic period; and we have evidence that he has poured his heat on the earth during periods compared with which the duration of the human race is but a second amid centuries, while the duration of historic races is lost by comparison.

Operative and Mechanical

DENTISTRY
Within the reach of all, at
Dr. H. T. CLARK'S
Dental Office and Laboratory,
31 WEST MAIN STREET,
Three Doors West of C. & P. R. Crossing,
RAVENNA, OHIO.
\$18.00 ONLY,
For a full Upper and Lower Set of the very best Gum Teeth.
\$16.00 ONLY,
For a full Upper and Lower Set of the very best Plain Teeth (preferred by many).
TEETH FILLED
With Silver, for only 50 cents.
All work and material guaranteed to be first class, and warranted, and at lower rates than any other place in Northern Ohio.
Send the following CASH PRICE LIST, and be convinced:
Either a full Upper or Lower set of the very best Gum Teeth, for \$18.00
Or a full Upper and Lower set of same, for \$32.00
Either a full Upper or Lower set of the very best Plain Teeth, for \$16.00
Or a full Upper and Lower set of same, for \$28.00
Each additional Tooth, up to six, 75c
Each additional Tooth, over six, 50c
Gold Fillings, minimum price, 1.00
Special attention given to all Irregularities of Children's Teeth.
Having removed my Office to my Residence, 31 West Main Street, thereby saving considerable expense in rent, etc., I propose to give my patients the benefit of the same; and all parties wishing work done would do well to call and see me before engaging work elsewhere. Twenty-five cents of more Wood and a quantity of Whitelead and Blackwalnut Lumber, are kept on hand for work.
Ravenna, July 25th, 1878. 618

RAVENNA MARBLE SHOP!
I have a very fine collection of designs from Eastern Carvers, and to parties in want of anything in this line, I should be very glad to give estimates on the different designs and materials, to suit the time.
Please give me a call.
All work warranted.
C. W. FOX, Salesman.
Chestnut St., opp. Court House, RAVENNA, OHIO.
A. W. STOCKER, - - Proprietor
I am dealing in Italian and all varieties of American Marble Monuments and Tombstones of every description, including the celebrated TENNESSEE MARBLE, which is especially recommended for beauty and durability.
Also, American and Scotch Granite Monuments,
of all styles.
I have a very fine collection of designs from Eastern Carvers, and to parties in want of anything in this line, I should be very glad to give estimates on the different designs and materials, to suit the time.
Please give me a call.
All work warranted.
C. W. FOX, Salesman.

BOOTS & SHOES!
We have been making extensive preparations for an unusually
LARGE TRADE
In Spring and Summer Goods and are now receiving them, and if
GOOD GOODS
AND
LOW PRICES
Are any object we have no fear of being disappointed, and propose to continue as heretofore to truthfully represent all Goods offered for sale. Our large Stock and elegant assortment are made up of our own, and also some of the best manufacturers of Central New York and the Eastern States, and for every style and quantity of finish and durability are excelled by none.
To the public and friends who have so liberally patronized me for the past
THIRTY YEARS,
Allow me to return my sincere thanks, and I hope by square upright dealing and popular prices to merit its continuance.
W. D. DURHAM.
Ravenna, O., March 11, 1878.

LEXINGTON HORSE, ANDIE,
Is too good to need any puff, farther than he looks and feels like. He and WALLACE will be kept through the season of 1878 at the following times:
MONDAYS and TUESDAYS of each week at Garrettsville.
FRIDAYS, at Kent.
THURSDAYS and SATURDAYS, at the Etina House Stables, Ravenna.
WALLACE stands 67 1/2 hands high, weighs about 1200 lbs., bay color, the style and color, and is a fine specimen of a horse, and is excelled by none, and a horse much needed in this country.
Thinking it to your interest I invite you to call on me, and see WALLACE and ANDIE.
Also, I offer to rent Sweeney (or no charge); most all Spawns and Ringbones; take off Lumps (of late standing); cure Cuts, Grapes and Colic; bring horses in condition, or sell the best Condition Powder now in use; take Cuts to break; take orders to buy and sell, &c. Charges low, will be in the above designated places.
Ravenna, March 25, 1878. J. L. CHRISTY.

NEW MARBLE WORKS!
This subscriber has opened a new Marble Shop in the rooms at the corner of Main and Sycamore Streets, where he is prepared to furnish everything in the line of Marble Monuments and Tombstones, in either MARBLE or GRANITE, at the lowest prices. He has had eighteen years' experience in this business, and is enabled to give satisfaction to all his customers. All those in want of anything in the line of Marble or Granite Work, are respectfully invited to call.
H. L. OSBORN,
Ravenna, March 30, 1878. 50
