

A Good Witness.
For nearly a century Dr. Sage's Catarrh Remedy has been known to the people as a positive cure for all catarrhal affections. Its great popularity with physicians and patients, together with its constantly increasing sale, attests, in arguments stronger than words, its healing power. It is general or nervous debility and impoverished blood. Dr. Sage's Catarrh Remedy should be used in connection with the Catarrh Remedy. The following eminent parties are among the thousands who have benefited by its use or Dr. Sage's Catarrh Remedy.

F. Downs, New Geneva, Pa.; J. D. Brown, St. Joseph, Mo.; E. C. Lewis, Duland, Va.; Levi Springer, Nettie Lake, Ohio; Chas. Norcross, North Chesterfield, Me.; Milton Jones, Corolla, N. Y.; J. E. Miller, Bridge Station, Wyo.; J. C. Merriman, Loysanport, Ind.; M. M. Post, Loysanport, Ind.; J. W. Bailey, Trenton, Pa.; H. B. Ayres, La Porte, Ind.; Josie M. Sears, Ft. Branch, Ind.; L. Williams, Canton, Mo.; W. A. Trayer, Orange, Ill.; S. E. Nichols, Jr., Galveston, Tex.; James F. Reimert, Stoneville, Pa.; S. W. Lusk, McFarland, Wis.; Johnson Williams, Helmsick, Ohio; Mrs. M. A. Curry, Trenton, Tenn.; J. G. Jolin, Keosauqua, Iowa; J. C. Miller, Rock, W. Va.; Louis Anderson, Gayport, Ohio; C. H. Chase, Elkland, Ind.; Mrs. Henry Haight, San Francisco, Cal.; E. M. G. Lush, Lawrenceville, N. Y.; W. J. Graham, Adel, Iowa; A. O. Smith, Newburg, Ga.; Chas. E. Rice, Baltimore, Md.; J. E. Jones, Coarsa, Va.; Ind. Ind.; J. D. Miller, Jr., Coarsa, Va.; Mrs. Minnie Arntson, 250 Delaney Street, New York; W. H. Hill, Hastings, Mich.; Wm. F. Lewis, Lowell, Mass.; Wm. H. Roberts, Macopa, Ariz.; Chas. S. Delaney, Harrisburg, Pa.; M. C. Cole, Lowell, Mass.; Mrs. C. J. Spurrin, Cranston, Ala.; Chas. F. Law, Jr., Farmington, Ohio; Mrs. Lucy Hunter, Farmington, Ill.; Capt. E. J. Spaulding, Camp Staunton, Va.; W. L. Tracy, Steamboat Rock, Iowa; Mrs. Lydia E. Miller, Staunton, Va.; M. Peck, Junction City, Mo.; Henry Ebe, Bantua, Cal.; L. P. Cummings, Bantua, Ill.; Chas. E. F. No family should be without PERRY DAVIS' VEGETABLE PAIN KILLER. It is a simple, safe, and effective remedy for all kinds of pain, including headache, toothache, neuralgia, rheumatism, and all other forms of acute pain. It is sold by all druggists and is a true family friend.

ALLEN'S LUNG BALSAM.
REMEDY FOR CURING Coughs, Colds, Bronchitis, Asthma, Consumption, and All Throat and Lung Affections.
Consumptives READ!
Allen's Lung Balsam is a powerful and effective remedy for all forms of lung disease, including consumption, bronchitis, and asthma. It is sold by all druggists and is a true consumptive's friend.

WANTED: A man to be buried alive recently. He fell senseless while having, and though pronounced dead, the body was kept in the house and carefully watched for several days, because he had expressed fears of being buried alive. Since the funeral his widow and daughter, having dreamed that this had really taken place, caused the grave to be opened, disclosing the horrible truth, as the corpse was found lying on its side, with the face badly bruised and the top of the coffin broken.

HEALTHY HOMES FOR FARMERS.

Science Applied to Every-Day Affairs.

The following is the substance of a lecture by Prof. R. C. Kedzie, of the Michigan Agricultural College, reported by the Detroit Free Press:
In opening, Professor Kedzie enlarged upon the necessity of good health for the farmer, and the commercial and moral value of that great desideratum. The out-door life of the farmer, he remarked, was conducive to good health, as were likewise the uniformity of his hours of labor and repose. But notwithstanding this, statistics prove that the lawyer, the minister and the doctor were longer lived than the farmer. Without going into all the reasons that might be assigned for this fact, Professor Kedzie restricted himself to the field of the home as related to health. He made this plea for healthy homes, he said, especially for the sake of women. "Man's life is in the field; his days are spent in the broader, grander and more diversified life, significantly named 'outdoors.' It was far otherwise with women. If the house is the scene of discomfort, the cessation of ill-health and drugging disease, there is no escape for her except in the grave."

THE SITE FOR A HOUSE.
was very important, and the farmer had far more opportunity to select a suitable place than the citizen cooped up in a small lot. He advocated the choosing of some gentle swell of ground, not a hill which one must wearily climb. The ground should flow off with a gentle declivity to the south or southeast, and afford an outlook over some portions of the farm. Swamp and low ground should be avoided; especially, said he, the southwest and west, because the prevailing winds would then bring acute and malarial diseases to the house.

THE GROUND.
on which a house is built should be free from stagnant water, both surface-soil and sub-soil. The elaborate researches of Pettengill and others have shown that damp and others has demonstrated the close relation between the prevalence of consumption and low forms of fever and the approach of the water-line to the surface of the soil. If the soil and sub-soil were not free from stagnant water, the ground would be a source of disease.

HELD IN THE SUNLIGHT.
He said he was amazed to see how dark it was in a house, even when it was not for want of windows; there were enough of them. But they were blinded and curtained until we need an owl's eyes to get around our rooms in the daylight. Bulwer forcibly says: "No plant so much as man demands light and air." In dark and sunless rooms we find feeble development, nervous diseases and consumption, with all their wretched train. Many houses are so constructed, and are overed by trees that the sunlight is excluded; the walls are damp, the rooms easily become musty, and boots and clothing readily mildew. Such houses can not be healthy. Cut down the trees so as to let in the sunlight, or if the trees are too sacred to be touched, then burn up the house. Professor Kedzie said he liked to see trees near a house, and that he would not plant them unless they were for health and comfort, but in planting trees about a house, and especially in their subsequent growth, see to it that the sunlight kisses with his benediction every wall of your house. Let no consideration come between you and a sunny home.

PURE WATER.
A good supply of pure water is a fountain of life and health, but a well into which fall the drippings from barnyard, privy vault or kitchen slops is a pit-fall of disease. Every well acts as a drain to an inverted cone of earth, the bottom of the well being the apex of the cone, and the base of the cone is a circle, with a well for its center. The diameter of this circle will vary with the porosity of the soil, with very compact rock clay free from seams it will be only three or four rods, but with porous sand and gravel it may be 10 or 15 rods, or even more if the well is very deep. Any foul material that gets into the water within this drainage area tends to find its way into the well. The water filters through the soil, giving up to the soil all such material as the matter and much of the impurities in it. When the soil becomes saturated with this sewage matter, it will then pass on in the well and become a source of disease. There is no other so abundant cause of typhoid fever in the country. Do not say the water is clear; "clear" and "clean" are two very different things as applied to water. There is no possibility of consistency in the water of your well, you may apply this SIMPLE TEST.

Fill a perfectly clean quart bottle two-thirds full with water. Dissolve in it a teaspoonful of the clearest white sugar, cork the bottle and set it away in a warm place. If it remains clear and bright you need fear no evil; but if it turns milky white and gives off an offensive gas, beware how you drink the dirty stuff.

Professor Kedzie closed his lecture by an appropriate reference to the necessity of securing healthy homes in this country, contending that the hope of the republic, its brain and brawn, were fostered and maintained chiefly by those bred in the country.

The Turkish navy is reported as comprising 22 ironclads, several of which are of the first class, besides 70 other steamers. Out of the latter a few small monitors have been destroyed since the war with Russia, but the remainder are still in service. The two largest ironclads are the Mes-sandiere and Mendouhije, launched by the Thames Iron Works and Shipbuilding at Blackwall, London, in 1874. They are each of a burden of displacement of 9,000 tons, are 332 feet long and 69 wide in extreme breadth. The frigate Osmanieh, a ram, armor plated from stem to stern, in the next class. She is 309 feet long and of 4,300 tons burden, and was built by Napier & Sons, Glasgow, in 1864. The twin screw steamers Avni Haid, or Help of God, and Minn Zaffer, or Aid to Victory, each 1,400 tons and 230 feet long, are said to possess the highest speed of any war vessels of the same tonnage.

One of the bloodiest of border duels took place at Bodie, Cal., a few days ago, between two mining partners, Bradshaw and Blair. Both were armed and got to quarreling, a challenge was given and accepted, and they began firing at each other only eight feet apart. Almost every shot told, the snow about them was soon crimsoned with their blood, and finally, after both pistols had been emptied and others secured, Bradshaw was mortally wounded in the abdomen, the victim was carried fainting from the field, shot in four places.

Two double cousins married perhaps 80 years ago. They are now dead. They lived in Harris County, Georgia, and raised 12 children, all of whom lived to be 60 years old and upward. Alternately a deaf and dumb infant was born, making six of sound body and six afflicted. The six deaf and dumb children lost their sight at 60 years.

HOME INTERESTS.

SOFT GINGER COOKIES.—One quart of molasses, 1 pound of butter and lard mixed, 3 eggs, 2 tablespoonfuls of ginger, the same amount of saleratus. To make them brittle, use a small piece of alum dissolved in hot water.

ORLEANS.—6 eggs, 1 cup of milk, 1 tablespoon flour, a pinch of salt; beat the whites and yolks separately; mix the flour, milk, and salt, add the yolks, then add beaten whites; have a buttered spider very hot; pour in. Bake in a quick oven 5 minutes.

CHOCOLATE CREAMS.—2 cupfuls of powdered sugar to a cupful boiling water; put on the stove and boil 10 minutes; grate 4 of a square of Baker's chocolate; place this on the top of a steaming kettle; leave it there until soft; meanwhile take off the cream and beat it until perfectly white; roll into little round balls, and dip them in the melted chocolate; flavor with vanilla.

YORKSHIRE PUDDING.—1½ pints of milk, 7 tablespoonfuls of flour, 3 eggs, and a little salt; put the flour into a basin with the salt and sufficient milk to make it into a stiff, smooth batter; add the eggs, one by one, and beat the eggs well beaten; beat altogether and pour into a shallow tin which has been previously rubbed with butter; bake an hour, then place it under the meat for half an hour to catch a little of the gravy that flows from it; cut into small square pieces, and serve on a hot folded napkin with the roast beef.

FIMBACED CHICKEN.—Having cut up your chickens, dry them in a towel, season them with pepper and salt, and dredge them with flour; fry them in oil and butter; they should be of a fine brown on both sides; when they are quite done take them out of the frying-pan, cover them up and set them by the fire to keep warm; skim the gravy in the frying-pan, and stir into it a half pint of cream, season with nutmeg, mace, and cayenne, and thicken with a small bit of butter rolled in flour; give it a boil and pour around the chicken, which must be hot; put some lard in the pan, and fry some parsley in it; lay on the pieces of chicken; it must be done green and crisp.

GATEAU DE RIZ.—8 ounces rice, 1 quart milk, ½ egg, 5 eggs, peel of 1 large lemon, 4 ounces butter, 4 ounces sugar, bread-crumbs; wash the rice well and put into a farina kettle with the milk and the lemon-peel grated; let it cook slowly till the rice is very tender and all the milk absorbed; if it becomes too dry add a little water; when it is quite cooked add the butter, sugar, and yolk of eggs; stir for one minute, remove it from the fire, and let it stand five minutes. Butter a plain mold or pan, thickly strew over the sides and bottom a thick layer of bread-crumbs made by drying bread in the oven and then pounding it in a mortar; pour the rice into it, and bake in a moderate oven for one hour, then cut it up upon a flat dish; lay around it any kind of preserved fruit, and serve it with a boiled custard sauce.

How a German Girl Managed.
She was a German girl, a Prussian, and her name was originally Barbara Finkelstein. She was the daughter of an intensely poor family of farmers, who had every thing but means. As for herself, all German girls couldn't show a piece of femininity which could compete with her in point of beauty, and very few in intellectual endowments.

On the next farm that of the Finkelsteins, resided a young man named Markscheffel. Young men always do exist in the neighborhood of young women, which accounts for the vast amount of trouble there is in the world. Now, Markscheffel, Gustave, being a very nice young man, what was more natural than that he should fall violently in love with the fair Barbara? And what was more natural than the Markscheffels, Sr., being in debt and very poor, should desire their son to marry his rich cousin, which account for the vast amount of trouble there is in the world. Now, Markscheffel, Gustave, being a very nice young man, what was more natural than that he should fall violently in love with the fair Barbara? And what was more natural than the Markscheffels, Sr., being in debt and very poor, should desire their son to marry his rich cousin, which account for the vast amount of trouble there is in the world.

Whether natural or not this was the situation, and consequently the unhappy couple had all sorts of trouble manufactured for them. They were not allowed to see each other, and were tormented and abused in all sorts of ways. Finally, one day, the fiery Barbara declared she wouldn't endure it any longer, and proposed to Gustave an immediate elopement to America, in which land money is supposed to be picked up anywhere and by every body. Nothing would have suited Gustave better, but, unfortunately, he couldn't possibly leave his old mother, who was a very good consideration, and there were other reasons why he could not leave his home, even for the alluring prospect held out by America.

But Barbara determined to go, at all hazards. She had an idea that in the New World she could better the condition of things, and that in time Gustave could join her, and then all would be well. Her parents were willing she should go, for she had absolutely refused to wed the man of their choice, and they were bitterly averse to the unfortunate Gustave. And so with very little money and her parents' blessing she sailed for America.

On her arrival here she found that money did not grow so freely, and that the streets were not paved with gold, but she did get a good situation in the house of a widower, as a housekeeper, here in the city, and was doing tolerably well, and looked forward to the time when her savings would justify sending for her lover.

But things went very badly with him. An accident made necessary the amputation of his left leg, just above the knee, and bad crups, and diseases among the cattle, reduced his family to the verge of bankruptcy. Gustave struggled along for two years, but matters got worse with him every day, and like a good horse, soul he finally wrote her releasing her from the engagement, and hoping that she would be as happy as he was miserable.

Now Franziska Finkelstein had a German girl does love, though she may do it ever so prudently, she stays very close. She had noticed a thing or two, and she wrote back to Gustave that she should not release him, but should marry him some day. He might have to wait five years, and she might not be precisely what she was, but she would die his wife.

What was the girl's idea? A very simple one. She had noticed that her employer, an ancient widower of 74 and very rich, had cast the eye of love upon her, and that all she should have to do would be to give him the slightest encouragement, and she could capture him without trouble. She didn't like it, but then she reasoned that Gustave would rather have her as a rich widow

than not to have her at all. Her ancient flame could not, in the course of nature, live a great many years, and as he had no absurd children to come fooling about with writs and disagreeable things of that nature inquiring about his sanity, it was a tolerably easy thing to do.

She gave him the encouragement he needed, and sure enough, in less than a week he had made a will giving her every thing after his death, and married her.

Patience and honest endeavor always meet with a proper reward. This took place four years ago. On the first day of December last the death of the good old man was chronicled in the city papers. Barbara had made him a good wife, and he had made her a good husband, and she followed him to the tomb, with respect for his memory, to say the least. And then wiping the proper tears from her eyes she promptly telegraphed Gustave, who landed here a week ago last Sunday, in the steamer Nevada, and was met by Barbara, who took him to her house, where the next day they were married, and he now smokes his pipe in the chair once occupied by another, and is just as happy as the day is long.

And so from the nettle danger she plucked the flower safety, and perseverance was rewarded. She will live long and prosper.

A FARMER near Portage, Wis., while digging a well heard a rumbling noise below as of running water, which grew louder as he went down. A short distance below he struck a bed of vein of gravel, through which a strong current of intensely cold air rushed up, but no appearance of water; but on going through the bed of gravel he came to water which congeals as fast as it comes into the well.

THE MARKETS.
NEW YORK, FEBRUARY 19, 1878.
BEEVES—Native Steers, 4.75 to 5.10
Texas and Cherokee, 4.50 to 4.75
SHEEP—Common to Choice, 3.50 to 4.00
HOGS—Live, 4.50 to 4.60
COTTON—Middling, 10.00 to 10.25
FLOUR—Good to Choice, 5.25 to 5.50
WHEAT—No. 2 Chicago, 1.25 to 1.35
OATS—Western Mixed, 54 to 54 1/2
PORK—New Mess., 11.20 to 11.60
