WOMAN KNOCKED DOWN AND ROBBED BY HIGHWAYMAN WHEN SHE SCREAMS; SAW HIS WEAPON WAS ONLY WRENCH

Miss Eleanor Olson, a linotype operator, formerly employed at The Tribune, was waylaid by a thug on Fifth avenue south between Sixth and Seventh streets, at 11:30 o'clock Wednesday evening, and knocked down and robbed of \$8 in cash and a ring.

Unconscious From Blow Miss Olson screamed when the thug presented the wrench and ordered her to throw up her hands, and he knocked her down and wrapped her coat around her head to prevent further outcry.

Tommy Gibbons Wins Over "Soldier" Jones, One Round Knock Out

Windsor, Ont., Nov. 16.—Tommy Gibbons of St. Paul knocked out "Soldier" Jones, claimant of the heavy-weight boxing championship of Canada, Wednesday night, in the first round of their scheduled 10-round bout.

"Y" Invites Girls to Join Mothers at Gymnasium

Daughters of members of the women's department of the Great Falls Y. M. C. A. have been invited by Secretary Ralph Wolf to accompany their mothers next Tuesday, Women's day, to the plunge and gymnasium.

David Starr Jordan Speaks at Methodist Church Next Sunday

Announcement was made Wednesday that David Starr Jordan, president of Leland Stanford university and one of the principal speakers at the coming convention of the Montana State Teachers' association, will occupy the pulpit of the First Methodist Episcopal church next Sunday.

Boston university. Dr. Wilson's evening address was on the subject of "Religious Education and the New Age."

Program for Today The program today (Thursday) opens with addresses by Miss Moody and Dr. Wilson. The afternoon session will be devoted to talks by the same speakers and also two talks by Mr. Rugg on training world Christians and missionary education.

Those attending the institute are the Rev. C. E. Haynes, Big Sandy; Mrs. Ralph R. Wolf, Mrs. C. G. Oakland, Mrs. Mary A. Buck, Mrs. A. E. Barkemeyer, Mrs. J. C. Stickman, Mrs. J. C. Kufus, and Mrs. R. W. Berry, all of Great Falls; Miss Hazel Halliday, the Rev. Harry T. Etong, Miss Dorothy Haugen and Mrs. Annabel Smith, all of Choteau; Mrs. F. W. Thorne, Mrs. C. R. McGee, Mrs. J. A. Moberg and Mrs. H. J. Mical, all of Geraldine; the Rev. Alexander R. Acton, Mrs. John Jeffries and Mrs. Harry C. Browning, all of Belt; and Mrs. Hazel Malcolm of Bynum.

Sunburst Oil & Gas Company Incorporated SUNBURST, (Toole County) MONTANA

President Sunburst Oil & Gas Company

Send for Geological Report and Contour Map, Free for the Asking

The First Well

The first well drilled to completion on the Cat Creek structure (by Frantz) produced only about enough oil to PROVE that there was oil in the area; the Clayton well drilled shortly afterwards, in a better location on structure, has been reported as producing at the rate of practically \$1,000,000.00 yearly (and don't forget the unreasonably low-priced oil period we are now just coming out of.)

On the showings to date in the several wells drilling in the Kevin-Sunburst structure, the promise looks so good it makes you tremble with thrills over what seems certain to become public information soon.

Satisfy Yourself---

Make a trip to SUNBURST and take a look over some of our holdings ON TOP of the dome—if you can't then "see oil," with your eyes shut or open, we don't ask you to put in with us. You'll say "it's sure to be there;" and you'll put every dollar you can into shares at \$1, while the opportunity is open.

A 100% Opportunity of Getting Production

Many geologists who have been on the ground over the Kevin-Sunburst area have spoken with the greatest confidence on the probabilities of production being gotten in the other wells drilling in several locations; but all likewise, have unhesitatingly admitted that the logical thing was to determine the top areas and drill there.

The field is so large, nothing short of the most thorough examination and work, could make this possible. In disseminating widely the first geological contour maps, we have but two ideas or motives—to show the desirability of our own holdings (GOTTEN SINCE THE PRESENT STRUCTURAL CONCLUSIONS WERE ARRIVED AT) and to give others the benefit, so far as it is any advantage to them, of the work we have had done and paid liberally for. We wouldn't drill a well ourselves without as near 100% opportunity of getting production as possible to determine; and we are willing that others who venture may use our information if it suits them.

The indications and showings (and more) in the wells now drilling in several locations, give you a thrill when you contemplate the SURENESS of our acreage, a lot of which lies directly on the TOP contour of the dome.

It is the privilege of anyone to try and question the engineering and geological conclusions set forth in this map, and its accompanying report. This is not said as a challenge, but as an invitation to study the facts.

Follow Your Own "Hunch"

Those who are courageous enough and able to come in with us now, to provide the balance of the capital necessary, will surely have reason to remember the fortunate day. Your own judgment tells you this; your "hunch" and inclination tells you that you should do it at once before other wells are brought in. You certainly have confidence; you couldn't justifiably feel otherwise. BUY ALL YOU CAN AT \$1—while you can. \$100 per share will look reasonable before long, very likely.

SEND IN YOUR SUBSCRIPTION TODAY, to Dr. Beaupre, treasurer, at Sunburst. We are sure you will never regret it.

The Possibilities—

Down in Texas another new field was brought in recently with a gusher, stated to be the biggest ever brought in in the United States; immense new gushers are popping every few days. This new famous field was turned down, even at ten cents an acre annual rental, by several of the biggest operating companies. It is now costing

Figure It Yourself—

We cannot talk to you personally, but we are giving you enough facts in "BLACK AND WHITE," so you can figure it out clear and definite enough. Many a man has his regrets over Cat Creek, and other fields in which opportunity invited him; many waited too late, then hurriedly rushed after "dry-tailed" wild-cats. Then, last spring a shrewd and very successfully planned and put over campaign was put on by the "big interests" and "others," to systematically discourage and "freeze out" everybody who lacked courage or didn't know. Watch oil prices climb now! The SUNBURST OIL & GAS COMPANY con-

them many millions to get part of what they could have had for practically nothing a few years ago. Experts now figure that ONE acre in this field holds enough oil IN EACH ONE ACRE to be worth around \$1,000,000.00. Acreage, in small lots has been selling for fabulous prices. No price seems too high to those who have the money to acquire a bit of it.

The President of this Company holds clean, and as the best attorneys in the state believe, unbreakable contracts for the turning over of about, or a little more than, 20,000 acres more of surrounding acreage in all directions from the little top of the structure—which ADDITIONAL acreage, as soon as transferred, will be turned over, without charge for a single acre, to the SUNBURST OIL & GAS COMPANY.

Summary and Conclusions Of Geologists Reporting on Structure

"The Sunburst Dome fulfills Geological Requirements for a commercial accumulation of oil, as far as can be known from a surface examination, for the following reasons:

- 1—Formations are present from which petroleum is naturally distilled.
2—Sands are present so located as to act as reservoirs for petroleum and are known to be productive in Montana and Wyoming.
3—The structure is such that it will act as a trap for the oil and a great drainage area is present to fill the structure.

"4—Indications are that the hydrostatic conditions, necessary to force the oil in to the top of the structure, are favorable.
5—Known presence of petroleum in notable quantities in the vicinity.

"Owing to the proximity of transportation, water and fuel with good roads, drilling conditions should not be difficult.
"Everything considered, the location of a test well on the Sunburst Dome should be made inside the top contour at a point accessible to main roads and an ample water supply. There are several places which fulfill these conditions. Any location inside the top contour (3350 ft. contour) being very favorable for production, expediency in cutting down drilling expenses should govern the location."

THINK IT OVER— Quick Action Is Necessary

When one—anyone—is SATISFIED that an opportunity is as BIG, GOOD and RIGHT as this looks to be, he or she certainly WANTS to be in on it. If you have not already made up your

mind and sent in your first subscription, then for pity's sake ask or tell us what it may be more that you want to know before acting. Very soon it will be too late.
