ARGTURUS MINE LEASED

STEEL TRUST NEGOTIATES WITH ST. CLOUD OWNERS FOR AN IRON PROPERTY ON THE MESABA.

St. Cloud, Minn., Nov. 30.—J. B. Cotton of Duluth, a representative of the United States Steel Trust, closed a deal in this city yesterday with Harry Harris, D. H. Freeman, John Coates, Mrs. C. P. McClure, Mrs. and Dr. E. C. Holden of St. Paul and others for a 60-year lease of the Argaturus iron mine property on the Mesaba range.

OIL LINE PROJECTED

Fluid to be piped from the Kansas fields to Chicago. Des Moines, Iowa, Nov. 30.—To pipe oil from the oil fields of Kansas to Chicago, crossing Missouri, Iowa and Illinois, is the task of the Prairie Oil and Gas company, which today paid into the treasury of Iowa a fee of \$2,500 for the privilege of crossing this state.

ROCKEFELLER IN SUBWAY POOL.

New York, Nov. 30.—The persistent stories that the Metropolitan street railway company has been negotiating for control of the Interborough was met today by an official statement that John D. Rockefeller and August Belmont are members of a pool which controls 70 per cent of the capital stock of the Interborough, and that Mr. Rockefeller regards this stock as a fixed investment.

INTERESTING, IF TRUE

You Can Try It for Yourself and Prove It.

One grain of the active principle in Stuart's Dyspepsia Tablets will digest 2,000 grains of meat, eggs or other wholesome food, and this claim has been proven by actual experiment which any one can perform for himself in the following manner: Cut hard-boiled eggs into very small pieces, as it would be if masticated, place the egg and two or three of the tablets in a bottle or jar containing warm water heated to 98 degrees (the temperature of the body) and keep it at this temperature for three and one-half hours, at the end of which time the egg will be as completely digested as it would have been in the healthy stomach of a hungry boy.

The point of this experiment is that what Stuart's Dyspepsia Tablets will do to the egg in the bottle it will do to the egg or meat in the stomach and nothing else will rest and invigorate the stomach so safely and effectually. Even a little child can take Stuart's Tablets with safety and benefit. It is a digestive weak and the thousands of cures accomplished by their regular daily use are easily explained when it is understood that they are composed of vegetable essences, aseptically prepared, and Gold Seal, which mingle with the food and digest it thoroughly, giving the overworked stomach a chance to recuperate.

Dieting never cures dyspepsia, neither do pills and cathartic medicines, which simply irritate and inflame the Intestines.

When enough food is eaten and promptly digested there will be no constipation, nor in fact will there be disturbance of any kind of digestion means good health in every organ.

The merit and success of Stuart's Dyspepsia Tablets are world wide and they are sold in the moderate price of 50 cents for full sized package in every drug store in the United States and Canada, as well as in Europe.

NEW IMMIGRATION DOOMS IDEALISM

American Skull Is Becoming the Short, Broad One of Practicality.

New York Sun Special Service. New York, Nov. 30.—After years of observation in the crowded tenements of New York and Chicago, Robert Hunter, the young sociologist, who married Anson Phelps Stokes' daughter, declares that the immigration from southern Europe will make the American skull shorter and broader. When it is remembered that more than twenty million immigrants have come to the United States since 1820, and that our immigration—which at present amounts to 1,000,000 persons a year—has largely changed from northern Europeans to southern and eastern Europeans—the Italians, Hungarians, Croats and Polish, Rumanian and Russian Jew—this prophecy regarding the shape of the future American's head is pregnant with suggestions of coming changes in our national characteristics.

Practical vs. Idealist. The broad and short-headed man is practical, but unimaginative. The man with the high and narrow head is the idealist. One can execute, but cannot invent. The creative dreamer, without force or mental disposition to carry his ideas into effect.

Last Friday 4,905 immigrants were landed in New York. This made 9,854 immigrants in two days, the vast majority being of the short and broad-headed type of southern and eastern Europe.

In those two days less than six hundred persons were born in the city of New York. The change in economic conditions being better for the immigrant and worse for the native leads many who were studying the situation to prophesy the rapid submergence and final extinction of the original white stock of the country.

Among the early immigrants to America was a large number of persons whose devotion to political ideals induced them to cross the Atlantic. They brought with them minds strongly disposed to idealism.

Weight of Centuries. Today the great bulk of our immigration comes from countries in which the peasantry for generations have been coerced from the ideal to the practical and material. The few who remain among them have high skulls, but the masses have short heads widened at the base by the struggle for existence.

A study of the immigrants pouring into New York just now seems to confirm the idea that the typical American of the future will be more practical and domestic, but less imaginative, less benevolent and less reverent. Another fact to be noted is the expenditure of \$50,000,000 in ten years for the cure of the foreign-born insane in the United States, not to speak of the official statement that of something like twenty-four thousand insane persons in New York state, one-half are foreign born, although the aliens in the state only amount to one-fourth of the whole population.

SCIENCE HELPS DETECT CRIMES

Telephone, Telegraph, Photography and Chemistry Often Used to Assist Police.

Washington, Nov. 30.—Modern science plays an important part nowadays in the detection of crime, and has in many ways simplified the work of the police. The fingerprinting of criminals, the task of escaping from the results of his crime more difficult than ever. The telephone, the telegraph, the art of photography, even the laboratory of the chemist have been successfully pressed into service, all rendering detection and conviction more swift and certain. With the perfection of wireless telegraphy, even an ocean-going liner is no longer a sanctuary for the hunted criminal, and his arrest in mid-ocean may be effected at any moment. Electricity has proved one of the most successful weapons against crime not only in its detection, but in its prevention. When the electric burglar alarm goes "a-burbling" at the present time, he will possibly find his path leads him thru a tangle of electric alarms, so that the slightest slip on his part will arouse the sleeping household. Or, if he be not exceedingly careful, he may suddenly find himself hurled to the ground with the force of an earthquake due to some equally cunning electric contrivance.

Chemistry a Thief Catcher.

Even more marvelous, however, is the part which the analyst's laboratory has come to play in the detection of crime. Time was when the subtle poisoner could accomplish his deadly work with little fear of discovery. Modern science has rendered it almost impossible to carry out such murders with any hope of escape. Murders by arsenic or by antimony have been brought home to the culprit by the careful methods of the modern analyst. The medical chemist of whom have made the effects of various poisons a lifelong study, are today more than a match for the most cunning poisoner. There are innumerable tests by which even the smallest trace of poison can be detected in the system after death. When suspicion as to the cause of death arises, every part of the human body is subjected to exhaustive examination. Even where poison has been administered in minute doses, the chemist is able to discover the particular poison employed by means of its chemical properties and crystalline formation. In the same way elaborate tests and experiments enable the analyst to tell the age, etc., of blood marks, as well as to distinguish between the hairs of a man and a beast. In this manner the denials and falsehoods of a criminal are blown away and his crime brought home to him.

Science Burglar's Foe.

As with the murderer of today, so with the modern burglar. Science has added materially to the difficulties of his labor. Some years ago a French savant discovered, after innumerable experiments, that an imprint of the thumb of no two individuals was exactly the same. Now, as the gentlemen of the jimmy and the lamp frequently leave impressions of their thumbs and fingers on window panes and elsewhere, the new science was immediately utilized by the police. Impressions left by burglars' fingers were taken and preserved at the headquarters, and have often been the means of convicting wrongdoers. Only recently, after a burglary at a large publishing establishment in London, an impression of the burglar's thumb was taken and compared with others in the archives of Scotland Yard. The impression was identical in every

SUES A SHERIFF. Boyle of Helena Says He Was Arrested Without Cause. Special to the Journal. Livingston, Mont., Nov. 30.—T. J. Boyle of Helena has commenced an action for \$7,500 damages for false imprisonment against Sheriff Al Robertson of this city, Deputy Sheriff Percy Robertson and Policeman A. L. Hansen. Boyle was arrested here last September and taken from a Northern Pacific train on a telegraphic request from the

sheriff of Custer county, who stated that a warrant was out for Boyle's arrest on a charge of burglary. Boyle alleges that the arrest was without cause and without any complaint having been filed in court against him. DULUTH, MINN.—Coroner Boyer, after investigating the death of George Wendt, who was killed near this city while hunting Sunday, has come to the conclusion he was slain by a street bullet, and was not shot at by mistake for a deer. ST. CLOUD, MINN.—Frank Xavier Boling, a native of Switzerland and one of St. Cloud's oldest residents, is dead.

LONG SABLE or Isabella Marten scarfs, Tabs, Satin or squirrel lined. Trimmed with tails. Cord fastener. Regular \$12.50 value. Thursday special \$8.75. OPOSSUM cluster scarfs in sable or Isabella shades. Full size. Regular \$4.50 value. Thursday \$2.95.

CANVASSERS APPOINTED. Court Acts in Sikorski's Contest for Seat in Legislature. WINONA, MINN.—Judge A. H. Snow has appointed as inspectors to look over the ballot box for representatives in the legislative district comprising the third and fourth wards of Winona and the towns of Richmond, Homer and Wilson, W. A. Fryer, Thomas Simpson and W. P. Blackman. The appointment is made on the application of Theodore Sikorski, democrat, who on the face of the returns was defeated by J. J. Peiler, republican, by two votes. Mr. Sikorski desires an inspection of the votes to prepare a case for submission to the legislature. The present calendar year will show more fire losses in Winona than for some years, due largely to the fires last February that destroyed the plant of the Minnesota Business company and caused a loss of \$27,000, and one last April that destroyed the German Methodist church and caused a loss of \$5,000. The total fire loss to date in Winona this year is \$32,000. Judge Thomas Bigg of Iowa Falls, Iowa, has been accused by Winona politicians of being an agent for a scoring box of Winona politics. On account of poor patronage last year there was no politics show this year. HIBBING, MINN.—The Duluth, Missabe & Northern railway has closed a contract with the Winston & Dear company to put in seven miles of new track on the main line east of Hibbing. The new line will shorten the distance to Duluth and avoid the Scott hills.
