

Piles Cured

As Easily as a Cough; Painlessly,
Quickly and Without Cutting.

Trial Package Mailed Free.
The agony and suffering in piles is so great, that if a surgical operation was a certain cure (which it isn't) and there was no other means of relief some persons might be willing to take the chance of blood poisoning or lockjaw. But, now that the Pyramid Pile Cure has been discovered and has been proved to be a quick and certain means of relief and lasting cure, there is no excuse for risking your life.

Does Pyramid Pile Cure give immediate relief? Does it cure? Try it and prove it for yourself as thousands have done before you. Then go to your drug-gist and get a 50-cent box and complete the cure.

Pyramid Pile Cure will cure you and do it with a certainty and a rapidity that will astonish you.

Take, for example, the case of Mr. Benjamin Shaw, Postmaster of Bland, Mo. He writes in his own words in his letter of Oct. 31, 1905: "I was in great agony of mind and body. In the meantime, a gentleman told me of the virtue of your Pyramid remedy. I fortunately found it at a drug store, and the next morning I did not feel that any operation was necessary, and in three days I was able to return home and a complete cure was accomplished to my great satisfaction and the surprise of the physician."

For a trial package, send your name and address to the Pyramid Drug Co., 4549 Pyramid Building, Marshall, Michigan, and you will get a trial package by return mail. No marks.

**Millions Spent to
Make Clean Beer**

**Cleanest Manufacturing Process Known
Is that of the Leading American Brewery.**

We regard beer as a food and the business of brewing beer one of our most important industries. When we tell our readers that without exception there is no other brewery in the world so absolutely clean in its process of manufacture as Pabst, we speak from exact knowledge of the monster Pabst Brewery at Milwaukee represents an outlay of millions of dollars and many of those millions have been expended to make the Pabst exclusive process absolutely clean. Pabst Beer stands alone today, the only food product that from the beginning to the end of its manufacture is absolutely beyond reach of even the contaminating germs of the air.

Doctors boil their instruments in water to sterilize them, and in the same way in closed kettles and thus sterilizes it. From there it passes through sterilized pipes to sterilized, hermetically sealed tanks where it is stored. Then through more sterilized pipes it goes to sterilized hermetically sealed storage tanks and when bottled it is pasteurized. Throughout the entire process it never is touched by human hands and comes in contact only with sterilized air. No other food product known can show such a record of positive cleanliness.

This process of manufacture is the exclusive Pabst method. It is one reason for the "always the same, always the best" reputation of Pabst Beer. The cleanest beer and the richest beer. Pabst Beer has no equal as a mild, refreshing, healthful beverage.

DR. FOLWELL READS PAPER

Minneapolis Man Discusses Sioux Treaty of 1851 Before Historical Society.

Dr. W. W. Folwell of the University of Minnesota read a paper on "A New View of the Sioux Treaties of 1851" before the regular monthly meeting of the State Historical Society at the Capitol in St. Paul last evening.

Judge Daniel Fish of Minneapolis was elected a member of the society. President N. P. Langford was empowered to appoint a committee to represent the society in arrangements for the fiftieth anniversary of Minnesota's statehood.

Resolutions testifying to the character of the late Joseph A. Wheelock and to his worth as a member of the society, his connection extending over a period of forty-six years, were adopted.

**WORST ECZEMA
DOCTORS EVER SAW**

Spread Rapidly Over Body—Limbs
and Arms Had to Be Bandaged
and Scalp Looked Dreadful—
Suffered Untold Misery for Three
Years—Better in Two Months

**MARVELOUS CURE BY
CUTICURA REMEDIES**

"My son, who is now twenty-two years of age, when he was four months old began to have eczema on his face, spreading quite rapidly until he was nearly covered. We had all the doctors around us and some from larger places, but no one helped him a particle. The eczema was something terrible, and the doctors said it was the worst case they ever saw. At times his whole body and face were covered, all but his feet. I had to bandage his limbs and arms; his scalp was just dreadful. I used many kinds of patent medicines before trying the Cuticura Remedies, all to no avail.

"A friend teased me to try Cuticura. At last I consented, when my boy was three years and four months old, having had eczema all that time, and suffering untold misery. I began to use all three of the Cuticura Remedies; the Cuticura Soap helped as well as the Ointment. He was better in two months; in six months he was well, but I gave him the Cuticura Resolvent one year, using twelve bottles. I think, and always used the Cuticura Soap for bathing, and do now a good deal. He was four years old before he was well, and his skin became perfectly fair when cured. I give you permission to publish this letter for I am always glad to do good when I can. I think I have told you all there is necessary to tell." Mrs. R. L. Rialley, Oct. 24, 1905. Pierson, N. H.

Complete External and Internal Treatment for every kind of Eczema, from Itchiness to Ulcers, consisting of Cuticura Soap, 25c, Ointment, 50c, Resolvent, 50c. In form of Chocolate Coated Pills, 25c per box. Cuticura is the best of all druggists. A single set often cures the most distressing cases. Write for full particulars to J. C. Cuticura, Boston, Mass.

Mail Free, "How to Cure Disfiguring Humors" and "All About the Skin, Scalp, Hair, and Nails."

Railroads

SOUTHWEST ROADS WAR OVER EAGLES

**WHAT TO CHARGE BIRDS CAUSES
MERRY ROW.**

**One Line Fixes \$11 Round Trip Kansas
City to Milwaukee, and Is Promptly
Jumped on by Competitor—Result,
Probable Rate of \$8 to Chicago.**

Chicago, May 15.—While the eastern lines are warring over the differential question and the Chicago-Minneapolis roads are badly mixed over the steamship business, the southwestern lines have decided to step into the line and give a little exhibition of rate-cutting. As a result, a rate of \$8 Kansas City to Chicago is likely to be announced at any minute.

The trouble between the southwestern lines arose over the proposal to move a large body of Eagles from Kansas City to Milwaukee for a July convention. It was proposed to put in a rate of one fare plus \$2, but finally one of the lines announced a rate of \$11 for the round trip. It tried to defend its action, but the other lines, and the officials of the Milwaukee and Northwestern lines that it was justified and those officials notified the line that they would require their full proportional of the one-fare plus \$2 rate on all business handled.

Overlook a Bet.

As these two roads are the only ones having lines from the south and west reaching Milwaukee, it appeared as though the situation was well in hand. But the road that proposed the \$11 rate found a way to solve the difficulty and submitted to the members of the Western Passenger association, a rate of \$8 from Kansas City to Chicago, while the Eagles are in convention. This would allow passengers to buy regular local tickets from Chicago to Milwaukee and then transfer to the Milwaukee and Northwestern lines for the trip to Milwaukee.

But the trouble among the southwestern lines comes just when another fight in the Western Passenger association was narrowly averted, over the movement of the B'nai B'rith society to Minneapolis. The Great Western road contracted the movement, which was not large, and then put in a rate of \$13 against a previously agreed rate of \$10. The Illinois Central to retaliate, announced a rate of \$4 to Minneapolis, but withdrew it and the Great Western will go unharmed for contracting business on a rate to be made later.

ROAD TAPS WILDERNESS

**KEWENAW CENTRAL, IN UPPER
MICHIGAN, TO BE PUSHED TO
COMPLETION THIS SUMMER.**

Special to The Journal.

Calumet, Mich., May 15.—C. A. Wright, general manager of the Keweenaw Central railroad, is authority for the statement that the road will be in operation within four months if present plans are carried out. The contract awarded to Byers & Co. of Houghton, for grading that portion left unfinished last year, covers less than half of the entire grading work, and the stipulation is that it shall be completed in August.

The progress of operations in building the road cannot be closely watched by copper-country people, as the line is practically inaccessible, only a wagon road being the present means of transportation thru Keweenaw county, but Mr. Wright says that the grading was well on toward completion when work ceased last fall and that track-laying had been prosecuted almost as rapidly as the grading.

The track-laying started at Lac la Poudre, the northern terminus of the road, and is being worked rapidly down toward the Calumet terminus. The track-laying will be pushed as rapidly as the grading will permit, and the steel will enter Calumet almost as soon as the grading gangs.

The terminus of the road, as being the outlet of the trade of Keweenaw county, will be of material assistance in promoting the growth of that part of Calumet in which it is located.

FIGURE ON SIDE TRIPS

**Railway Officials Plan to Give Visitors
Something Extra.**

For the first time in ten years passenger representatives of the twin city terminal lines will meet May 24, to consider side trips in the territory for delegates to the numerous conventions to be held in the two cities this summer. The last meeting was at the time of the G. A. R. national encampment in St. Paul. Trips to Duluth and the Minnesota lake country will be included in the list to be made out.

HILL GOES TO WINNIPEG

**Magnate Gets First Glimpse of Manitoba
Capital in a Decade.**

James J. Hill, president of the Great Northern road, left for Winnipeg yesterday on a special train, and will return Wednesday. Henry Little was taken aboard in Minneapolis. This is Mr. Hill's first visit to Winnipeg in ten years, and the people there have been looking forward to seeing the man who is reported about to build the fourth Canadian Transcontinental. Darius Miller, first vice president of the Burlington, accompanied Mr. Hill.

**FOREST FIRES SWEEP
DISTRICT NEAR VIRGINIA**

Virginia, Minn., May 15.—A destructive forest fire has been raging in the vicinity of the Mud Lake district, southwest of this town, for several days. There are several farmers in that vicinity and it is feared that some of them have suffered from the fire, though nothing definite has been learned.

The fire is only a few miles from the Virginia Lumber company's yards. Last year, the company checked it, but the danger is still very great.

W. H. BRANDT IS DEAD

**Business Man of Barron, Wis., Took
Poison by Mistake.**

Special to The Journal.

Barron, Wis., May 15.—W. H. Brandt, a highly respected business man of this city, is dead, having taken a half-ounce of belladonna by mistake for brandy. He was about 50 years old.

DEADWOOD, S. D.—Great preparations are being made by the local Odd Fellows for the thirty-first annual session of the grand lodge in conjunction with the grand encampment, the annual session of the I. O. O. F. and the seventeenth annual session of the Rebekah assembly, to be held in Hot Springs this week.

Gardening for Pleasure and Profit

NOW IS THE RIGHT TIME FOR PLANTING DAHLIAS

Some Straight Information for the Benefit of Those Interested in the Culture of This Handsome Bloomer.

Dahlias should not be planted out-of-doors until May 15, and excellent results have been obtained from roots planted June 15. The dahlia is naturally a late-blooming flower, and while a few blossoms may be seen in August, it does not produce its full crop until September. Often, however, in early September there comes a frost, which kills the dahlia while it is at its best. This destruction may be prevented either by selecting a location which is naturally sheltered, or by placing tall stakes around the plants, and covering stakes and plants either with paper or some cotton material during frosty nights. As a result of these precautions, dahlias were cut last fall on Nov. 12.

The cultivation of dahlias is simple. The bulbs should be placed three to four feet apart, and so that the crown of each is fully four inches beneath the surface. It was proposed to put in the soil before or during planting; in fact, sandy soil is preferable to rich soil. When the plant has attained the height of two feet, the crown should be well-rotted cow manure may be placed around each plant. This should be freely watered every day. Indeed, the plant will flower far more freely if constantly kept moist than if watered only occasionally.

When the bulb has sprouted, and the growth has attained the height of six to eight inches, it is advisable to pinch the crown in order to produce a branching habit. The result will be a dwarf, bushy plant with loads of flowers.

During the early part of the flowering season, a great many imperfect buds seem to develop, which should be removed as soon as noticed. An application of a small quantity of nitrate of soda, during the latter part of August, will advance the flowering season, and last longest when they are cut. Some of the best single varieties are found in a comparatively new type called the Twenty-Century, made up of gigantic flowers, having broad petals and a small yellow center. Separate colors of this type are well worthy of cultivation.

Another new type of a single dahlia is the Collette, which was originated in France. The flowers have an extra, very small white petal, which grows in a circle around the disc, producing a collar-like effect.

Possibilities of an Out-of-Door Room.
Only the favored few are able to close up their winter tents of stone or wood and get out in the fresh green country. Those unfortunate ones who must remain in the city must make the most of such goods as the Gods design to provide, and there is a veranda or balcony or even a flat roof anywhere around the city home, then there is compensation for their possibilities are limitless.

The first step toward creating this habitable veranda is to screen it well from the view of passerby. Vines, with their suggestion of rusticity and coolness, are the most satisfactory for this purpose, and among the many varieties of climbers the stately old English ivy must have first mention, although of them all the simple wild cucumber, whose seeds must be planted every year, is the most thrifty and altogether satisfactory.

Crimson ramblers, climbing roses, Baltimore bells, climbing honeysuckles, and a dozen other climbing plants will, any one of them, meet the demands. The vines may be trained so that three or four window-like openings are left, and a border of red geraniums or bright yellow nasturtiums at the roots

against a background of shrubbery, if subordinated to the house.

The spring flowering spires, and the common but pretty barberry are shrubs well adapted to use against foundation walls, since their branches droop gracefully and give good lines. The foliage of both, too, is handsome, taking on lovely tints in autumn.

Variety may be given to an ivy-covered house by planting dahlias, cosmos, or even Alleghany hollyhocks instead of shrubs.

Not Too Late for a Garden.
May is not too late in this northern climate to make a vegetable garden. The cold and rain of the early spring gave the early planted seeds little opportunity to sprout. All gardeners claim nothing is gained by being in too great a hurry to make a garden, especially in the north. Nothing is gained by working over the soil heavy with water from melting snows and early rains. Wait until this surplus water has drained off, and the action of sun and wind has mellowed the soil to some extent.

Plant Flower Seeds.
There is hardly a place where there is a bit of earth, be it city of country, but what some flower will grow. Clean out the trash from your backyard, get a spade and dig up the earth, rake it smooth and fine. Then get the seeds of a few old-fashioned flowers and drop them in the soft earth. Marigolds, hollyhocks, ragged robins, larkspurs, four o'clocks, sweet williams—any of these will grow with little care and make beautiful the worst sort of a backyard. Get a morning-glory vine, or rather plant the seeds, and train the vine over that ugly bit of back fence. Plant a tree, if there is a place for it, and scatter some grass seed wherever it is possible for it to grow.

A Public Benefactor.
An individual who improves his front yard, if he has one, or places window boxes at his windows, or small evergreens at his doors, or improves his side-yard or backyard, if he does nothing else, is not yet altogether egotistic; he is giving pleasure to all who pass. If he undertakes in a quiet, tactful, but direct way a movement that will induce similar improvements along his block, he is acting in a way that is altruistic, but the improvement of his block will help him egotistically, because his own house will be more beautiful from its location on a beautiful street.

The city beautiful is unquestionably dependent upon the interaction of the individuals that compose the city on the one hand and the city in its corporate capacity on the other. The more individuals there are who show their interest in the embellishment of their city by proving that interest by their own efforts, the greater will be their direct influence when appealing for better conditions generally, and far greater will be their indirect influence by the simple power of suggestion offered to all passersby.

Scarlet Runners.
A pretty effect may be obtained by planting scarlet-runner beans underneath peony bushes. By the time the peonies have ceased blooming the beans will be a foot high and will soon clamber all over the strong supporting leaves. All thru August the beans will blossom freely and will make a pretty show of color where otherwise there would be none. Peony bushes, covered with bright scarlet runners, have much the same effect as salvias, and will brighten the garden.

The Front of the House.
The front of the house is for the eye of the public and for the beauty of the city, and a man ought to have pride enough to do a little something in behalf of both.

What can he do? Well, he can establish a good lawn and keep it well clipped, for one thing, and it's not as easy as it sounds, either. More lawns are spoiled by the injudicious use of water than thru any other cause. The sprinkler is going every day just enough to wet the surface. The grass, instead of sending its roots deep in search of moisture, forms a network of roots near the surface and dies out in winter. One thoro soaking once a week is vastly better than a daily drizzle. Watering should be done in the evening, rather than in the morning.

You can't get it into some people's heads that there is a newer and better way of washing clothes than boiling, and rubbing them to pieces on a washboard. The Fels-Naptha way of washing is as big a discovery to the woman who washes—as is the telephone to the business man, or the sewing machine to the needle woman.

Fels-Naptha soap is meant to
