**EARNINGS INCREASE**  
Minneapolis & St. Louis System Shows Great Prosperity.  
Earnings of the Minneapolis & St. Louis road for the second week of May are reported as \$61,041, an increase of \$10,295; and since July 1, 1905, the earnings total \$3,213,960, an increase of \$596,462.

The earnings of the Iowa Central for the second week of May amount to \$48,966, an increase of \$6,654; and since July 1, 1905, the earnings amount to \$2,574,346, an increase of \$333,367. The increase in earnings of the combined systems amounts to almost \$200,000. At that rate the increase in earnings for the fiscal year will reach over a million.

## PAVING TORN UP AS SOON AS LAID

SIXTH STREET WORK SPOILED TO TAP SEWER.

Builders Disregard Warning to Make Connections Before Pavers Begin Work—Streets Badly Torn Up by Corporations Which Hustle to Get Pipes and Wires Underground.

After completing a neat job of paving between its tracks at Hennepin avenue and Sixth street, the street railway company can now stand by and see the work ripped up in order to make sewer connection for the new Lyceum building. The street railway officials are thoroughly disgusted over the prevailing methods of street work.

Minneapolis never was so badly torn up as it is at present, and the complications are numerous and aggravating to all concerned. With the telephone and electric companies laying conduits in compliance with the orders of the council, and underground connections being made in compliance with the new electric ordinance, the street railway company relaying a great deal of track, the gas and electric companies installing the new curb lights, the waterworks department setting new fire hydrants, property owners making sewer and water connections, and the asphalt company pushing its work with all possible speed, the conditions in the downtown sections are worse than they ever were before.

**Policy Well Defined.**  
Public sentiment is strongly opposed to tearing up new pavements, and there is a well-settled conviction that all improvements, particularly water and sewer connections and electric wire conduits, should be installed before the paving work is done, and that further opening of streets should be prohibited after the pavement is down. The city engineer is of the same opinion and has frequently refused permission for opening the street. He even went so far as to refuse to allow a telephone company to lay a conduit on Nicollet avenue because it would delay the paving work.

In the present instance, the permit for a sewer connection was granted by an employee of the sewer department who probably was not aware that the street railway company had just completed a job of granite pavement at that point.

**Authorities Are Puzzled.**  
It is a great problem with the civic authorities to determine how many sewer connections should be ordered. City Engineer Rinker cites the case of the Syndicate block. Before it was built, the city ordered fifteen sewer connections for that block. Afterward, one building was constructed and the owners provided a special large sewer and the expense for the fifteen connections was wasted.

Again, a large tract of land may be held by one person who informs the authorities that when he improves the property, he will erect one building to cover the entire tract, and will need only one sewer connection. Later, the property may be sold, lot by lot, to different persons, and when buildings are erected, will require a separate connection. Such contingencies are likely to arise at any time, and it is difficult to solve the problem in advance.

**The Tri-State Telephone Company Offers \$50 Reward.**  
Whereas, certain persons are maliciously cutting wires and otherwise damaging the property of the Tri-State Telephone company, in this way putting the public to great annoyance.

The Tri-State Telephone company will pay \$50 reward to any person who will furnish such information as will lead to the conviction in the United States court of any telephone man committing such illegal interference.

## NO MARKED CHANGES IN LAND ASSESSMENT

City real estate assessments now being made under the direction of City Assessor Miner are not to be greatly changed. Reviewing the situation before a group of interested real estate men and city officials at the Commercial club, Mr. Miner has announced that no "horizontal" increase is contemplated and the assessments will be on much the same basis as heretofore. Where property values have actually increased, a proportional increase in the assessment will follow. Inequalities that have been pointed out will be considered and equitably adjusted. The meeting yesterday was called because of a report that a "horizontal" increase in tax assessments was contemplated. The real estate interests were represented by the executive and legislative committees of the real estate board, and the city by Mayor Jones, City Controller Dan C. Brown and City Assessor Miner. Lester E. Elwood, Hennepin county representative of the state board of equalization, was present.

### Children's Union Suits

Children's fine light-weight Cotton Union Suits, cream color, all sizes, each..... **50c**

# LANDS, HOMES AND INVESTMENTS

Hand County, South Dakota

Is that so? Yes. Why? Because we raise corn that averages 32 bushels per acre to feed the hogs. This is a wealth producer. Oats that average 63 bushels per acre to feed the horses that help do our work. Wheat that averages 17 bushels per acre, which goes to all the world to feed mankind so he may prepare for the duties that are before him when called upon by his fellow man. Barley that averages 33 bushels per acre, which is used for different purposes. However, it is the money-maker for the farmer who produces the grain, and the brewer who makes the beer, but for the consumer we leave that for you to answer. Speltz that averages 38 bushels per acre, and is one of the many grains that can be used for horses, cattle, sheep, swine, and poultry to make them grow fat. Potatoes average something like 235 bushels per acre, and are of a very fine quality. Hay, hay, we have no way of knowing, as thousands of tons go to waste. But we do know that our grasses and hay produce the fattest cattle that go to market. The above averages were made in the year 1905, and year by year we will double this production as the land grows older and the wilder nature is subdued.

Now, why should you wait longer? Our railroads are extending westward to the coast and lands are fast advancing in price. They will double in price within the next six months, as every train that goes through Hand County is bringing in emigrants. Is there any reason why you should delay this from time to time and always be a renter? In securing a home you cannot afford to let this last opportunity pass you by in getting a home in the corn belt of South Dakota. Hand County

alone produced 700,000 bushels of No. 1 corn in the year 1905. Here is where you want your home, where hogs and corn grow, and there is prosperity and contentment. There are other places to seek a home, but compare them with Hand County, South Dakota, and you will note that we have outweighed them in the way of production, and by getting the crops we do, and such a goodly variety, does it not appeal to your reasoning power that this is the place to make your home? We have told you what we produce; now we will tell you about the soil and climate in Hand County.

The soil is a deep black loam and runs in depth from 11 to 38 inches. This is underlaid with a yellow clay subsoil. In some parts of the country there are a few stones, but none to harm whatever; they are simply the prairie hardhead. The lands we offer for sale are from a perfectly level to a gently rolling tract, according to the location. Most people want level land, and this is what we prefer ourselves, yet we have either.

The rainfall for the year 1905, from April to August 1st, inclusive, was 22 inches. This will mature any crop. We are centrally located in the artesian basin. All you have to do is simply bore a hole in the ground and the pure and wholesome water spouts forth at the rate of 20 to 100 gallons per minute. It requires no elbow grease to run this well nor the climbing of a high windmill tower to grease a wheel that has been howling for the last ten days for more oil. Night and day, wind or no wind, grease or no grease, the artesian well is faithful even unto the end. Tubular wells are easily gotten within 15 to 150 feet in depth.

We are on the main line of the Chicago and North-Western Railway running from Chicago to Pierre, the state capital. This great railway system has hundreds of men and teams at work extending this trunk line to the Black Hills, the richest 100 square miles in the United States in the production of gold, and we are but 257 miles from this great gold field, with an agricultural country that has no equal in the way of producing what the millionaire and miner require, at our very door. Markets, and good ones at that, and ones that are absolutely sure, as there is a market for all that has been produced up to the present time. In fact, the demand has been greater than the supply, and while we are getting thousands of emigrants and home builders, thousands are going to the Black Hills, so we will never have an overstocked market. The demand will always equal the supply. These are matters a prospective land buyer should take into consideration and carefully weigh. A land where he can find a ready market for his products, and at a good price, and where you can raise corn, oats, wheat, barley, millet, speltz and potatoes. Why should you stay in a country and pay high rent or work for someone else? Why not own a farm of your own where they raise all the above products?

Kindly read over the descriptions of three farms which we include in this ad.

Farm No. 19 contains 320 acres, 125 acres under cultivation. Five miles from county seat. This farm has a splendid six-room house, large frame barn, buildings are all in first-class condition. Well is near the

house. This land is all tillable, not one foot of waste land on same. Soil is a deep black loam, with clay subsoil. For immediate acceptance our price on this farm is \$27.50 per acre. We will carry a mortgage for one-half of this amount. Six per cent interest, payable on or before five years.

No. 26. For immediate acceptance we will sell a square section of land in Hand County, S. D., with a new six-room house, barn room for 200 head of stock, granary room for 2,000 bushels of grain, artesian well flowing water enough for 1,000 head of stock. Lies level; every foot of it is tillable; soil is a deep black loam with clay subsoil, and at the price we offer this land there is no other tract its equal for the price. For a few days only we will let this land go for \$17.50 per acre. Very liberal terms can be given. Don't hesitate on this if you are interested in procuring a home or making an investment, as this is the place.

No. 21. This half section has a good five-room house in first-class condition, good stoned-up cellar, extra good cistern, holds 65 barrels, one of the best wells in the state, windmill, pump, and tank; barn room for 150 head of stock; granary and corner room for 4,000 bushels of grain; four miles from town. We will carry from \$2,000 to \$3,000 bearing 6 per cent interest.

Homeseekers' rates are in effect on each Tuesday of each month, one fare plus \$2.00. The C. & N. W. will carry you direct to Miller, S. D. Be sure to write Craig & Leyson all you want to know and ask them all the questions you wish and they will give you all the assistance necessary for you to have in getting you a home.

**CRAIG & LEYSON, Land and Immigration Agents, MILLER, SOUTH DAKOTA.**
