WHOLE JAP ISLAND

ONE GREAT FOREST

Fires That Burn for Three Years on Saghalien Island.

Yokohama, Oct. 27.—The Japan Times translates some interesting observations by Dr. Kishikami, of the civil administration bureau in Saghalien, concerning the great forests of that island. According to Dr. Kishikami, the enormous extent of forests of pine trees of various kinds sometimes gives the traveler the idea that the whole island is one great forest. These trees are all of the best quality, and are so tall and large that boards of fir shank by three can easily be sawn out of them. The timber falling, however, is not looked upon as a very inviting business, since there is not yet sufficient means of transportation.

It is striking but characteristic feature in Karafuto, says the doctor, "are the great fires frequently occurring in these gigantic forests, and none but eye-witnesses of the scene of such fires can realize the extent of damage done to the forests. The fire sometimes lasts from one to three years, and in winter the flames still creep on their way under the heavily piled-up snow; and as the return of spring they start with tremendous fury, licking down whatever trees may come in their way." From these facts we may well imagine how big these forests are. In spite of the striking but characteristic feature in Karafuto, says the doctor, "are the great fires frequently occurring in these gigantic forests, and none but eye-witnesses of the scene of such fires can realize the extent of damage done to the forests.
