News of Mine, of Prospect, of Furnace and of Mill.

A BIG STRIKE IN LIPMAN MINES

Five Feet of Silver and Gold Ore Rewards Local Interests in the North.

ITH five feet of ore in the properties of the Lipman Mines & Tunnel company at Hailey, Ida., over which to revel, M. H. Lipman, general manager, came down from camp again yesterday morning, feeling that the fate of the undertaking is now practically assured. It was at a depth of 100 feet in the shaft that a depth of 100 feet in the shall that the disclosure was made, and while the temptation to crosscut the ledge at that point is a powerful one. Manager Lipman, who hastened from New York to camp to inspect the development, has directed his superintendent to refrain from it until a level is established at 150 feet. Assays on the ore reveal from thirty-six to 185 ounces silver and from thirty-six to 185 ounces silver and from 31 to 38 gold per ton, the metals oc-curing in a quartz gangue, that as a

rule overlies the lead.

At the Red Elephant, operated under an option by Sait Lake parties, the visitor reports Superintendent Page taking out second-class ore from the 100 and 200-foot levels while in the Croesus two feet of solid galena, running very high in silver, was passed through at a depth of 700 feet in the shaft. Active operations are to expend at the Mayflower mine, owned by J. V. Farwell of Chicago, next by J. V. Farwell of Lohn O. Packmonth, while the mill at John Q. Packard's Tiptop is to go into commission it a short time. The Minnie Moore con tinues to maintain a most sensational output, says Mr. Lipman, with elever feet of solid galena among its splendid assets. The camp throughout is in fine physical condition and will show a greatly increased output the present

LEAD-SILVER ORES IN FIVE SHAFTS

sinking of five independent shafts to depths averaging 50 feet each having demonstrated the continuity of the ledge through the entire length of the Pioche-Nevada Con, company's possessions at Pioche, Nev., the management, sald Judge John W. Burton, on his return from camp yesterday, will on his return from camp yesterday, will now proceed with systematic development. To this end the central shaft, from which a recent shipment was made to the furnaces of Salt Lake valley, and at the bottom of which four feet of high-grade ore is now exposed, will be dropped down with the next level to be established at 190 feet, while demonstrations made in the old mines to a depth of 1200 feet or more afford abundant evidence of possibilities beto a depth of 1200 rect or more attora abundant evidence of possibilities below. The ore exposed in the main shaft, said Judge Burton, will average between 50 and 60 per cent lead, with at least a unit of silver for each unit of lead, without reference to the gold and copper with which they are asso-clated. With means with which to prosecute this work and ores with which to maintain a surplus, work on the main shaft will be steady and en-ergetic. Not one of the shafts on the ledge but has exposed ore of commer-cial quality and while the demonstra-tion is a remarkable one it is not without its precedents in the neighboring mines that have been productive of so much wealth.

York is now at camp conducting an examination of the Raymond & Ely, the Yuba, Meadow Valley and other mines embraced in the Pioche Con., while ev-

erything, said Judge Burton, is favorable to a senson of much activity.

At Caliente, on his way home, Judge Burton met Superintendent Lloyd of the Chief group of mines, that are being developed by Hon. Charles O. ing developed by Hon. Charles O. Whittemore of this city and associates. It is already a mine, was Superintendent Lloyd's assurance, the ledge varying from 6 to 20 feet between walls, the ore, which averages better than \$10 gold per ion, affording a perfect cyaniding proposition, while that a mili will be provided for it appears quite well as-

YAMPA PUTTING OUT FINE TONNAGE ORE

Walter S. Kelley, the newly designated manager of the Tintic Mining and Development company, departed for the Yampa mines and smelter at Bingham yesterday morning, accompanied by George H. Robinson, the company's managing director, Mr. Kelley to take active charge at once, with Superintendent W. J. Craig the sovereign underground. The latter, who was in from camp during the day, reports from 150 to 290 tons of ore now going daily to the valley smelters pending the reconstruction of the com-pany's own plant, while the mine is in condition to respond with any tonnage for which the management may call. He leaves for the Kenneber group of mines at Alta this morning to inquire into the progress of developments into the progress of developments there, where a drift is now being run with the strike of the Mammath ledge With the outlook for the Kennebec Mr. Craig is most favorably impressed.

MR. FISCHER RETURNS FROM THE PACIFIC

After ten days on the Pacific coast, George K. Fischer, the eminent mechanical engineer under whose supervision lead blasts are being installed at the United States smelter with enlargements for the reduction of greater tonnages at the Utah Con., came in from the west yesterday morning and left for the scene of construction during of construction during the afternoon. With the progress of construction at each he was much pleased last night, and that the improvements will be completed as scheduled he sees nothing to prevent at this time.

to prevent at this time.

In San Francisco he met L. C. Trent, who is operating mines in northern California with apparently profitable re-sults and who is now shipping the prod-uct to furnaces on the coast. To afford more economical means of trans-

portation, however, he is now preparing to construct a branch line of rall-way twenty-seven miles in length.

Among others he met George Heintz at the head of the traffic department of the "North Shore Route," and whose efficient endeavors are reflected in a greatly increased business. The road is through a region full of picture-sque interest, said Mr. Fischer, and a trip through California is incomplete without a trip over the North Shore. Mr. Fischer returned visibly benefited, Mrs. Fischer protracting her stay in the west.

MANAGER KNOX OF THE REVENUE MINES

Roger Knox, manager of the Revenue mines and mill at Morris, Mont., has returned to camp after conferring with local interests to rush work on the new 100-ton cyanide plant with which the properties are being equipped. During his administration a most gratifying change has been made in the condition of the properties and with the new plant in commission the earning of dividends will have begun. While the Revenue is classified as a milling prop-osition, some ore of sensational value has been forwarded by it to the smelter while small fortunes for all interests are now exposed.

TETRO CUTS OUT PACE IN STOCK MARKET

The day on the mining exchange closed with the sale of 9505 shares of stock for \$3102.38, and while trading was light, conditions were generally firm. Montana of Tonopah was in active de-Montana of Tonopah was in active de-mand about \$1.63, with much to denote the appearance of another piece of spending money from that source in June, while Victoria of Tintic, in which there has been some energetic curb trad-ing for some time, found a market up to \$1.17\frac{1}{2}, with but few offerings at any figure. Tetro, upon whose form the shorts have been dancing for some days, sized the hits in the teeth during the seized the bits in its teeth during the afternoon and shot up the pike to 32 cents, while Yankee Con. found a customer at 36 cents, with Star Con. re-ceding to 13 cents. The trading in Daly West was confined to five shares at \$22.50, while Con. Mercur changed hands at 31 cents, the day closing on the following market:

BRAN' NEW CAMP IN LA SAL COUNTRY

Special to The Tribune.

ASIN, La Sal Mountains, May 18.-Radium is the name of the new town now being started on the Grand river near the old town of Richardson. The promoters announce that inside of sixty days they will have good supply of water on the ground, the surveys made for streets, and a number of buildings in course of erection. The company backing this enter-

prise is composed of N. W. Biethen of Denver, Colo., F. E. DuMoulin of Joliet, Ill., C. P. Schumacher of Leadville, and Gide R. Propper of Basin, Utah. Mr. DuMoulin returned from Denver today fully equipped with all the nec-essary provisions for going ahead with the enterprise. They have taken up more than 600 acres of ground at what was formerly known as the Beer Botwas formerly known as the Beer Botwas formerly known as the Beer Bot-ton about two miles below the old Rich-ardson place. These gentlemen have also located fourteen mining claims hear the famous Welsh-Lofftus proper-ty, upon which they will at once begin active development, as well as having quite a tract of oil land in the Richard-

quite a tract of oil land in the Richardson Basin.

A substantial hotel is to be crected, a bank started, a newspaper established and numerous other business ventures will be among the permanent business enterprises. The newspaper will be christened "Raidium," and in every respect the new city will have the famous new substance of radium attached to its prospective future. It is also a forerunner of the coming of the Grand Valley, Colorado River & South Pacific radiroad, and may be called a railroad. railroad, and may be called a railroad town as well as being the commercial trading point of all this country.

Messrs. DuMoulin, Blethen and Schu-macher are men of unlimited capital and have come to this country to stay. They will also be largely interested in mining in the La Sal mountains, having already taken hold of the Iowa property at Basin, and as soon as practicable will start extensive operations here. They are quite enthusiastic over the showing at the Welsh-Lofftus uranium radium mine, and frankly state that it radium mine, and frankly state that it is the most remarkable mining prop-

is the most remarkable mining property they ever saw.

The big boilers, engines and other machinery for the placer plant at Dewey is now on the road from Clisco and no time will be lost in getting it in operation. Hamlin-Brooks company have about a mile of very rich gold bearing gravel along the Grand river and they are going at it in a business manner now to take out big pay.

Perry D. Jones has a force of men at

now to take out hig pay.

Perry D. Jones has a force of men at work putting down an oil well about five miles west of Cisco, and at last accounts had reached a depth of 1800 feet with very fine indications of oil ahead of them. Several companies are preparing to put down wells in the vicinity of Cisco. All of the country from Cisco to the Grand River crossing, a distance of thirteen miles, has been bedistance of thirteen miles, has been lo-

distance of thirteen miles, has been lo-cated by oil operators. Charles W. Haskell, chief engineer of the Grand Valley, Colorado River & South Pacific railroad of Grand Junc-tion has been ordered to prepare him-self for notice at any time to start work of the survey down the Grand river to the head of the Colorado. He will be at Radium this week to do the preliminary work for the townsite company and to work for the townsite company and to survey the radium mining claims.

TETRO HAS ORE

IN THREE LOCALITIES

Robert Brown, the efficient superintendent of the Centennial-Eureka mines at Tintic, came in from camp again yesterday morning to confer with the management concerning the needs of the smelter and departs again this morning. With the new system which is being employed in the extraction of ores at the Centennial, Superintendent Brown is very much pleased and says there is no doubt of its merits or that it has come to remain permanently. Of the Tetro, Mr. Brown, who is directing its campaign underground, reports ore in considerable quantity in at least three different exposures, while a piece of the ledge has been left for the Go-diva. The south drift is now advancing in ore and the output should, says Mr. Brown, develop a steady increase.

THE OHIO'S MILL AGAIN IN MOTION

With a new set of rolls which enable it to do more efficient work, the Ohio Copper company's mill at Bingham Is again in commission with a steady volume of concentrates of good quality is-suing from it tables. The plant is now reducing an average of about 125 tons of ore daily while over eighty tons of crude ore, maintaining an average of 25 per cent copper, has been forwarded to the valley smelters the present month with this to be increased to 200 tons, perhaps, before the first of June. Manager Henry Catro, who is again giving the proposition his undivided attention, is much pleased with the condition throughout.

DAY'S OUTPUT OF ORES AND BULLION

AND NEW RECORD

Unprecedented Receipts of Ore Promptly Met by Management

HE management of the Bingham

Con. smelter posted a new record on Tuesday, during which run 740 tons of ore was reduced without any apparent sweating around the plant and with the battery manifestly prepared to digest another spoonful or two, for which, said Superintendent Nutting during the afterneon, accom-modation will be provided. The re-ceipts of ore at the plant are unprece-dented, the Boston Con, having reached the bins with over 300 tons dally for the bins with over 300 tons daily for several days with premonitions of an even greater volume, while the Yampa is appearing with an average of about 150 tons, with another large consignment of high-grade concentrates starting from the Utah Copper company's mill in Bingham canyon. Meanwhile, the company's mines are contributing quite freely to the receipts.

quite freely to the receipts.

Manager MacVichie, who has returned from the Dalton and Lark group, reports about 800 tons coming from that oction of the company's domain, while the output of water through the long tunnel has increased to 1800 gallons per minute since driving was resumed

FINE RECOGNITION OF SPLENDID SERVICES

The appointment of Joseph M. Bidwell as assistant manager of the American Smelting and Refining company's interests in this State was yesterday announced by Manager C. W. Whitley, which recognition was, manifestly, a source of as much pleasure to his superior officer as will it be to the company's community of clients, who entertain for him naught but the high-est esteem. Since 1883 Mr. Bidwell, although a young man yet, has been identified in one capacity or another with the smelting industry in this State, his apprenticeship beginning with the old Germania. Few, indeed, are as conversant with its progress or with the progress of the industry from which the furnaces derive their nour-ishment. With the producer none have made themselves more popular and in the splendid recognition of his services by Manager Whitley the company has carned the approval of each of an army of patrons.

ACTIVE CONSTRUCTION BEGINS AT NEWHOUSE

To exercise a general supervision over the campaign of equipment at Newhouse, and to co-operate with Joseph Dederich, the superintendent of con-struction, W. C. Thomas departed for camp last night accompanied by Manager Fred Bettles. Immediately on their arrival the site for the machine shops and other structures with which the big concentrater is to be surrounded will be selected, the survey for the townsite will be inaugurated and plans generally for active construction out-lined. On the same trip Manager Betthes will make final inspection of the water line which is giving excellent service, while ground will be broken for hins to be erected at the mouth of the tunnel. For two weeks surveying has been in progress on the line of railway between Newhouse and the mouth of the tunnel with active grading to follow at once along this division, while by June 1, construction will be moving from every point with as many men as it is possible to employ.

HIGH GRADE ORE REWARDS A. HUDSON

A telegram from Arthur Hudson, who is developing the Twilight group of locations near the properties of the Tono-pah-Beicher, nine miles out of Tonopah, Nev., announces the presence of twelve inches of very high-grade ore in the shaft which is being sunk by him. Mr. Hudson has a large circle of friends here who will be glad to learn of his achievements in the west

Boston Coppers Neglected. Special to The Tribune.

Special to The Tribune.

BOSTON, Mass., May 18,—Very little interest was shown in the local market today. Sales were scarce and confined to a few issues. The tone is still mixed. Traders get little encouragement trying to advance prices and are contenting themselves by looking on. While copper shares were neglected, local issues were almost as had, although more of a trading suirit was shown in one or two trading spirit was shown in one or two stocks which suffered in price on the trading. Hornblower & Weeks, brokers, & State street, Boston, and 10 Wall street, New York, furnish the following quota-

LAVA CREEK TO MINE IN IDAHO'S REGIONS

Articles of incorporation of the Lava Creek Mining company, organized in this city with a capital stock of \$10,000, were filed in the office of the County Clerk yesterday. The stock is divided into 100,000 shares of the par value of 10 cents each. The property of the company consists of a number of claims in Lava Creck Mining district, Blaine county, Ida. The officers are as follows: S. B. Smeltzer, president; W. A. Langford, vice-president; C. W. A Langford, Vice-p., Smeltzer, secretary and treasurer,

Tonopah Stock Sales.

In the ore and bullion market the day's settlements amounted to \$82,400, McCornick & Co. reporting them as they fullow: American bullion, \$41,900; gold, silver, lead and copper ores, \$40,500.

In the metal market silver ruled at 155% cents an ounce, lead at \$3.50 per hundred pounds and casting copper at 12% cents a pound.

Mining Notes.

George Topliff, resident representative of the Rand Drill company, leaves for the Sheba mines in Humboldt county, Nevada, tomorrow, to install a new compressor. Some very rich ore is reported coming from the south drift in the property. Managing Director Holden of the United States company was in Boaton yesterday, after a trip into the Southern country. Cot. Ellis is in receipt of some very high grade as imples of copper ore from the E. & F. company's mines out of Ploche, Nev. Clyde A. Holden, secretary of the Belmont and Butler Mining companies at Tonopah, left for Philadelphia yesterday to remain several weeks.

Manager Charles E. Knox of the Mon-

Manager Charles E. Knox of the Mon-tana-Tonopah departed for the big Ne-vada camp again yesterday morning.

Frank Benedict has returned from Bing-ham, where he has been making an inven-tory of ore bodies in the Bingham & New Haven, but declines to discuss them at this time.

S. M. Levy leaves for the Buckhorn group of mines in Ophir canyon this morning, and from that camp will con-tinue to Dugway in the Deep Creek coun-try, to inquire into developments at the St. George company's properties.

Vice-President J. D. Wood, who has been looking into the resources of the Daly West at Park City, comes back much pleased with the evidences of permanency at all points underground.

The Mammoth of Tintic was on the market with another lot of ore during the day.

The Victor Con. of Tintle marketed an-other let of copper ore during the day. The Grand Central drew down the pro-ceeds of two more cars of high-grade ore yesterday.

The United States company has two car-onds of lead ore from its Bingham mines at the sampler. BUENOS AYRES, May 18.—The Argen-line Minister of Foreign Affairs is drafting a commercial convention with Brazil, in-cluding all Argentine articles.
