

# News of Mine, of Prospect, of Furnace and of Mill.

## YOUR UNCLE SAM BRINGS RICH ORE

Consignment of Rock From Humboldt Ground Markets for Over \$100 Per Ton.

FOR twenty-five tons of ore from the properties of the Uncle Sam Mining company at Tintic the management was yesterday permitted to draw down a check for over \$2500, the settlement taking place on controls that revealed as much as 157 ounces silver, 8 per cent lead and \$2.20 gold per ton. The consignment, said Manager Chipman, was shipped from new ground in Humboldt territory, south and near the Anaconda fraction, and while the chute is not a large one, it has every appearance of permanency, with picked samples running very high. A lot of ore sold the previous day netted the company \$50 per ton, with a fine breeze of this exposed in the mine, while at the sampler yesterday were three carloads of concentrates running well up in lead and silver, with fair values in gold. With the mill doing its work even more satisfactorily than expected, with a large volume of ore with which to supply it, and with new territory responding with \$100 rock the condition at the Uncle Sam is a most gratifying one. The annual meeting of shareholders of the company is scheduled for June, when most cheerful reports are promised, and when the campaign of development for the ensuing year will be mapped out.

## MAJESTIC AFFAIRS IN NEW YORK

THE committee of Majestic shareholders which has been soliciting a relief fund that further proceedings in bankruptcy may be unnecessary is scheduled to make its report at a meeting in New York today. In its canvass it is said that the committee has confined itself to the minor interests, believing the major ones would come forward with any deficiency and that from the former it has obtained subscriptions amounting to over \$50,000. This, it is said, exceeds the amount expected from the minority, and with the majority subscribing as liberally local interests see how it is possible to discharge the urgent obligations and to blow in the smelter, which has already demonstrated its efficiency. That the company has ore has been demonstrated by the receivers, who have been coming to market with such as they deemed necessary to pay costs incurred under the order of court, and it is hoped that today's deliberations in New York will relieve the situation.

## NEW ORE BODIES IN ROCCO-HOMESTAKE

A report from Bert Smith, vice-president of the Elko County bank of Eureka, Nev., and manager of the Rocco-Homestake mines in that camp, advises local interests that shipments for the season have been resumed, the ores maintaining the usual high percentages in lead and characteristic values in silver. The new shaft, for the sinking of which money was reserved from last year's earnings, has now reached a depth of 150 feet, with the first level, established at 50 feet, extending north and south in ore of good quality, while in the incline is another exposure of galena, with fine bodies in the two main stopes, old workings. It is estimated that ore of the value of \$70,000 will have been shipped before winter snows shall again interfere, with dividends to be resumed again in a short time. Rocco is among the few, indeed, that have had no apology to make to its shareholders during the dull period.

## THE MONTANA'S FINE GRADE OF ORE

A sample of ore from the latest strike in the Montana of Tonopah, Nev., affords index to a story of wealth as sensational, perhaps, as any in the history of that most remarkable camp. Studied with crystals of ruby silver and sheeted with glance, it affords a splendid example of the wealth of silver with which the camp has been endowed, while associated with it is an auriferous pyrite and some copper, the whole affording a most interesting study, with a valuation of several thousand dollars per ton. While the breast of ore will not maintain an average denoted by the specimen, it is by no means rare and a half dozen "average" dividends have been exposed since the disclosure was made.

## THE CAMPAIGN IN OIL AND GAS FIELD

Superintendent Rumbaugh of the Guffey & Galey oil-bore out of Farmington reports the drill again dropping down after repairing the break in the casing and the hope is expressed that the day of interruptions has passed. At the Union Gas and Pipe Line company's Centerville well the management is congratulating itself that the flow of gas from the meter which was tapped in the upper stratum proved a light one, as the desire is to get the element at as great a depth as possible. Meanwhile the army of interests in the field are watching eagerly the bore at each point and much new rigging will follow immediately permanent results are accomplished.

## SILVER-LEAD ORES IN U. S. TERRITORY

While the consignments of lead ore from the United States company's Bingham system of mines are coming at intervals only they are, never the less, to be made quite a unit in the output from that source. At a period in

the annals of that territory it was productive of a greater volume of lead, perhaps, than any corresponding piece of ground in the State and that some of the more important chapters in the record will be repeated, is becoming hourly more apparent. At present the output of lead is principally through the lessees employed in ground which was quite actively staked in former years, the product affording the company a piece of money while compensating the miners. Since the installation of lead blast furnaces in the valley, however, the company has begun the reopening of the old lead-bearing channels at greater depth, however, and a material increase in the output of this class may be relied on the present year. In addition to the silver and lead contained in the ore there is some gold and copper in present consignments.

## LIGHT TRADING ON THE STOCK EXCHANGE

The day on the mining exchange closed on the sale of 15,789 shares of stock for \$373.87, and with the market generally unchanged, Daily-Judge came forth to a bid of \$1.10 at the opening session and was then marked up to \$1.50, while Daily West was traded in at \$2.75, on which investment it is paying the shareholders better than 20 per cent, with Century, whose May dividend will be passed "round today," changing hands at 75¢. Tetra was not so buoyant as on the previous day and sold down to 30¢ cents, while Carissa made fractional gains, with Little Chief quite active up to 12¢ cents. Star Con. had a few more shares awaiting the early comers, as did May Day, while another ward of Beck Tunnel came out to a bid of 6¢ cents, the day closing on the following market:

## BOSTON MINING STOCKS.

Boston, May 19.—The Boston market grows dull and duller each day. More stocks were for sale today than yesterday, but the bids in many instances were somewhat scarce. The list shows a decline of about half a point for copper shares, while the local group suffered a further decline in some instances. There is very little in the copper share market to interest traders. They want to see more commission house business before they attempt to trade and at present pay more attention to the New York list than to the local market. In the afternoon the strength in New York failed to bring a response from the Boston market and prices closed quiet. Hornblower & Weeks, brokers, 55 State street, Boston, and 10 Wall street, New York, furnish the following quotations:

	Sales	High	Low	Close
Amalgamated	1,211	48 1/2	48 1/2	48 1/2
Bingham	21	21	21	21
Daily West	21	21	21	21

## THE CARISA'S SALE OF COPPER ORES

The Carissa of Tintic, which has been recording all kinds of disclosures during the month, notwithstanding the indifference of the investor toward its shares, came forward with a proof of its new pudding yesterday, at which time a consignment of ore was sold on controls showing as much as 25 per cent copper. The consignment came from one of the new strikes and will be followed by another in a few days. Manager Joseph, who has the proposition entirely out of debt and who is now piling up a surplus notwithstanding the large amount of exploratory work which has been paid for, is to be congratulated on conditions at the mine while the outlook is most promising. It is said of conditions on the 300-foot level that they are all preliminary of an early change there, while the levels above tell their own story in the class of ore coming from them.

## UTAH TALENT IS PILING UP WEALTH

The Goldfield News, telling of the lease of Zeb Randall of Utah and his associates on the January mine at Goldfield, says:  
The crosscut to the south from the 50-foot point in the new shaft is in fifty-five feet and every foot of it—every pound of it—is ore of good grade. When ore from the high-grade streaks has been sorted out for shipment, the balance will mill from \$10 to \$20 per ton. To add to this showing richer ore than before encountered in the January mine is coming from the west drift. In the face of this drift there are eight feet of ore, and two feet of this is exceptionally rich. A specimen assay taken yesterday went \$673 to the ton in gold—the highest assay yet from this property.  
The main shaft is down 165 feet and is all in ore. The lessees are taking out from 300 to 500 sacks of ore daily. The screenings that go through the grizzly run from \$120 to \$140 per ton. Notwithstanding steady shipments there are nearly 300 tons of ore on the dump. The mill dump now aggregates above 4000 tons.

## CENTURY'S DISTRIBUTION; CONDITIONS AT THE MINES

P. W. Madsen, under whose intelligent endeavor the Century of Park valley has attained a place among the bread-winners of the State, came in from camp again yesterday morning to be present at the May distribution, which occurs today, and from which the shareholders will receive prizes aggregating \$3000. With conditions at plant and properties Manager Madsen returns very much pleased. The battery at the mill is now dropping on an average of fifty tons of ore daily, which is maintaining an average of \$9 gold per ton, while underground everything is most satisfactory.  
With the manner in which the Iona, covering the Century ledge on its extension, is behaving, Mr. Madsen is also very much pleased, and with the acquiescence of his associates, plans will have soon been devised for the equipment with stamps. Its vein is a large and well defined one, presenting values and characteristics identical with those in the elder proposition, and the management believes itself justified in recommending the construction of a plant with which to begin the pounding out of gold dollars.

## WESTERN VIEW ON THE COPPER OUTLOOK

The Mining and Scientific Press of San Francisco, commenting on the future of the red metal, says: "The outlook for copper is more promising than for some time past. It is stated by authorities that the surplus has been entirely absorbed and that the present output of the metal is being reduced, scarcely keeps up with the demand and actual absorption of the metal by the industries. Whenever copper reaches a low price the result is heavy buying by consumers, and also the introduction of the metal in new uses. In the time of high prices, in view of the present situation, a firm market for copper is anticipated, with possibly a somewhat higher price."

## MIDAS GOLD DROPS INTO THE TREASURY

The first lot of auro-cyanides from the new mill at the Midas of Deep Creek was settled for yesterday, the consignment netting the company \$1609. For an initial 100 at 16¢ the result is a very satisfactory one although the net promises to show a material increase.

## Good Values in Red Top.

The Red Top is to the front again this week with a new strike—this time on the south end of the claim in the company workings, says James E. O'Brien in the News of Goldfield. At a depth of seven feet the entire bottom of the shaft shows good values and a sample across eighteen inches assayed \$7.70 per ton. This shaft will be sunk to a depth of fifty feet before crosscutting. On Capt. Bradley's lease, crosscutting from the fifty foot point has begun. The showing here continues fine.

## Tonopah Stock Sales.

Tuesday's transfers on the San Francisco board were recorded as they follow: Belmont, 100 at 21¢; buyer ninety days; Midway, 500 at 25¢; Tonopah Mining Co., 100 at 38¢; Montana-Tonopah, 1175 at 16¢; North Star, 200 at 20¢.

## COPPER PRODUCT FROM UTAH MILL

Eight Hundred Feet in Ore Emphasizes the Enormity of the Copper Deposits.

THE management of the Utah Copper company reported at the sampler last night with another consignment of high-grade copper, gold and silver-bearing concentrates that five cars on the Rio Grande were required to handle, and from which a vast amount of money sufficient to provide for the May payroll is expected. In addition to this a consignment equally as large was left in the bins, while the crushers are no passing about 550 tons of ore daily. Meanwhile the developments underground are exceeding all expectations, and with every shot the company's resources are being added to. For over 800 feet the new tunnel has forged its way through ore with every particle of it going into the bins while that there is a dump on the ground is scarcely perceptible. Superintendent Janney, who was in from the mine during the day, says of the proposition that while it is yet in swaddling garments none in Bingham are headed for greater heights, and Mr. Janney's life has been spent in the diggings. The average contents of the rock has been a surprise to not a few who have followed it up, and with the equipment completed the earnings should compare favorably with any in the class of rock on the same class of rock on a considerable portion of its domain, Mr. Janney has no doubt that the Boston Con. will hasten with the construction of its projected concentrator in Salt Lake valley.

## UTAH INTERESTS ON LONE MOUNTAIN

There is increased activity in the Lone Mountain district and considerable inquiry for groups of claims with good surface showing, and several bonds have been taken in the last few days and many more transactions are being negotiated, says the Bonanza of Tonopah of a region into which so much Salt Lake money has drifted. The most important sale was that of the Ontario group of four claims, east of the Gen. Thomas mine, which has been sold in New York for \$5500, of which a considerable sum has been paid in cash. The same buyers bought the Lulu and Laura claims adjoining for a good cash figure. The Ontario group has an excellent showing and a recent assay gave the following values: 6.9 per cent lead, 236.10 oz silver, \$12 gold, or a total of \$161.17 per ton. At the Gen. Thomas the sinking of the first 100 feet of the main shaft is completed and the contract for the next 100 feet will now be let. On the western slope of the west bank, Eron shear has commenced active operations on the Independence and the directors of the Enterprise company owning the adjoining ground will also start up this coming week. Hennessey & Wingfield are developing the limit and have been at work on the dump awaiting the railroad, and the Paymaster will make their first shipment on or about the 15th inst.

## BUTLER CONCENTRATES AFFORD FINE PRODUCT

It is said of the Butler-Liberal of Bingham mill in Bingham canyon that to reduce the second-class ores now being forwarded by the mine that at least thirty days will be required. The concentration of the ore is reduced, said Manager Barnes of the mill, compares favorably with the best that has ever been sent out of camp and with considerable of it exposed he sees no reason why the entire expense of operating the property should not be derived from this source. Meantime the tunnel is advancing rapidly and the outlook at the Butler-Liberal was never as assuring.

## BAMBERGER'S MILL DOING FINE WORK

The Bamberger-DeLamar mill is doing good work these days. The mine is responding nobly to the draft made upon it and seven or eight mills are kept running three shifts per day. The extraction is all that can be expected, and more than it has been at any period in the history of the company, says the Lode of DeLamar, Nev.

## DAY'S SETTLEMENTS ON ORES AND BULLION

In the ore and bullion market, the day's settlements amounted to \$90,100, McCormick & Co. reporting them as they follow: American bullion, \$23,500; gold bullion, \$11,000; gold, silver, lead and copper ores, \$55,600.

## Mining Notes.

While he is not prepared to designate the day on which the event shall take place, Manager Channing of the Utah Con. said positively yesterday that the enlargements will go into commission next month.  
Superintendent Allen of the Centennial Eureka departed for that Tintic bonanza yesterday morning.  
A letter from A. W. Tibbels, manager of the Vinciguator at Goldfield, Nev., assures local interests that he has found the vein, and that, while he had not obtained assays, it was quite evident that values are present.  
M. P. Gilbert, at one time associated with the Carbonate and Rattler mines out of Fresno, is in Bingham.  
Capt. James A. Black has returned from Park City, more favorably impressed than ever with the endurance of its resources.  
Mining and Scientific Press: Manager Cohen of the Daily Hill Con. company at De La Mar says they are preparing to
