Dr. B. Hoffman, 1249 Montana st., fined \$10 and costs for speeding.

AUTO HORN FOR BURGLAR ALARM

One of the surest and best sorts of burglar alarms can be fashioned in the home with no other appliances than a high powered, well-equipped automobile.

This simple device is recommended by a Chicago motorist who tried it with the best sort of success. There are a lot of people who might have difficulty in procuring the automobile, but those who have one can try it.

There are few people who are greater sufferers from petty thievery than motorists who keep their cars in private garages. There are so many little expensive things about an auto that are easily detached that they seem to attract thieves and as a result the garage set away off from the house becomes a favorite place for the light fingered fraternity to ply their trade.

The Chicago man who invented this preventive suffered in silence for a long time and then he provided a safe and sure relief by simply connecting his electric motor horn and headlights with the garage doors just as an ordinary burglar alarm is connected.

The result was that when Mr. Burglar opened the doors the headlights flashed out and the horn started a rasping, deafening roar that continued until someone came from the house and closed the doors again. The noise was so sudden and so startling that the first burglar who started it was frightened off immediately and it was so loud and continuous that it aroused the entire neighborhood.
