

ELKINS SPEAKS. Gives His Views on the Republican Platform.

THE FREE SILVER QUESTION.

How Coinage Would Produce a Profit and Unemployment of Business—As a Producer He Protests.

Senator Elkins was recently seen at his home in his country home, and by a representative of the Parkersburg State Journal was asked what he thought of the Republican platform.

"I think it will take from the party some of its strength, but draw many sound voters to it," he said.

"What have you to say on the subject of silver? It is understood generally that you lived in the West and had some experience with silver."

"The senator replied that he had been for many years interested in silver mining, and had made the question of silver and its use as money a study for more than twenty years."

"Mr. Senator, what is your notion about the demonetization of silver dollars?"

"The senator replied: 'I do not think that has anything to do with the present question of silver. I think if what is known as the demonetization act had been passed, our silver troubles would be even more acute than they are.'

"Why should Congress limit the use of silver as money?"

"Because there is too much silver," he said.

"Under the constitution Congress has power to coin money and regulate the value thereof. This means that Congress has the right to limit the amount of silver or silver whenever it is deemed expedient."

"The trouble is that silver in recent years, especially since the demonetization by European governments and the large production throughout the world, has been too plentiful to permit all of it to be coined."

"What have you to say about cheap money?"

"There is nothing in cheap money," he said.

"The question reduces itself to this: That no government in the world has ever been able to legislate a free silver coinage."

"If the United States, by an act of Congress, can make an ounce of silver worth a dollar, when the world will only take it for 20 cents as gold with gold, and it can be bought for 10 cents, then the government could make the silver worth a dollar worth two or three dollars."

"If the principle is admitted that by legislation value can be created, then we have the solution of the problem of financing power."

"Cyclone Photographed. The Engineering News of June 11 prints the first photographic cut of a cyclone ever published."

"When in the dark of some desolate dream I see all her with me, and I am full forgotten, through her dear eyes."

"The free coinage of silver at the rate of 16 to 1 by the United States alone would take the six hundred millions of gold in use out of circulation."

"I know, while sink my slow dissolving soul in the sea of oblivion."

"Half the process of thinking is in having plenty of F. H. Co.'s ham along for luncheon."

THE GAMEST SALMON

Said to Be the Ouananiche of the Province of Qu. bec.

FOUND IN THE WILDEST WATERS

It Flights Like Tom Sharkey, With Leaps and Rushes—Rare Sport in a Birch Canoe.

The least known and beyond question the gamest fresh water fish extant, is the ouananiche of Lake St. John, province of Quebec.

The beginning of the combat is almost invariably a leap of five or six feet from one to three feet above the surface of the water, accompanied with a wild shaking of the body and a wild thrashing of the tail and away; this may be ten, thirty or fifty feet. Instantly the fish turns and speeds back to the starting point, and a multiplying reel cannot take in slack fast enough. Result—a quick turn back and the hook torn out. All this while, and the hook is in, the slack is taken in as fast as given.

Just here it should be stated that the ouananiche, as a characteristic of the salmon, hooks in the outer edge of the mouth, the best success is had in any kind of weather with the first three mentioned, especially when only one fly is used, which is enough. I believe that they are more easily discernible through the foamy waters. In using two flies, one of these three kinds should always be used as a trailer, and the others for the dropper. Highly colored flies, green, blue, red or white, and those with heavy, rough bodies are useless.

The ouananiche does not often jump from the water to take a fly cast, although they are very keen jumping from the water for natural flies. If seen swimming in the eddying foam they are readily seen when they take a fly, but in rougher waters the fly is almost invariably taken under water. The moment a fly is taken, and the fish feels your strike or sets the hook, a struggle commences with which nothing else in fresh water fishing can compare.

Magnificent Fruit From Seeds Planted Ten Years Ago.

There is a novelty in the fruit market just now. People who have been lamenting the lack of sweet Florida oranges caused by last season's frosts will be glad to know that there is now on the market a consignment of large, sweet, juicy oranges from Rodi, Italy, which have been raised from the seeds of the celebrated Indian river oranges of Florida, that were planted ten years ago.

This is the first time that oranges grown in Italy from Florida seeds have ever been heard of, and the lot that came over on the Anchor line freighter Scinda Wednesday is the first lot to reach America.

When Louis Contencin, of Louis Contencin & Son, fruit dealers and importers, at 2 and 4 Stone street, sent over the seeds ten years ago as an experiment to their Italian house, F. S. Clama & Son, Rodi, Italy, he did not exactly calculate that these seeds would bear him fruit just at a season when the scarcity of sweet Florida oranges makes his Rodi orange groves especially valuable.

On the floor of his office, 150 sprucewood boxes were in rows yesterday, filled with big, juicy specimens of the first consignment.

There will be no more Florida oranges for ten years," said Mr. Contencin to a reporter for the New York Times, as he walked about the boxes and surveyed their contents with satisfaction, "and

The ouananiche does not often jump from the water to take a fly cast, although they are very keen jumping from the water for natural flies. If seen swimming in the eddying foam they are readily seen when they take a fly, but in rougher waters the fly is almost invariably taken under water. The moment a fly is taken, and the fish feels your strike or sets the hook, a struggle commences with which nothing else in fresh water fishing can compare.

PROVIN & MCKEAN

OUR NEW LOCATION 323 Pike St. NEAR FOURTH.

Ten cases of new goods due to arrive Monday or Tuesday. We had a chance to buy a lot of Wash Goods and one thing and another away below market value, so as soon as they arrive they will be placed on sale at extraordinary low prices. We mean to reduce stock from now on, and all surplus stock must go at some price—no summer goods to be carried over, if low prices will sell them. Great clearance sale all this month.

SPECIALS FOR MONDAY

- Best Indigo Blue Calico, only 3 1/2 yard, Monday.
Good Red Calico, Monday only, 3 1/2 yard.
Men's Flannelette Negligee Shirts, 10c Monday.
Men's Linen Collars, Monday only, 3c each.
Ladies' Unlaundered Shirt Waists, 15c Monday.

We Are Overloaded on Some Goods.....

AND MUST CLOSE THEM OUT, AS WE WANT NO SURPLUS STOCK ON OUR SHELVES. WE DON'T STOP TO THINK OF COST WHEN GOODS HAVE TO BE SOLD, SO HERE ARE SOME ITEMS THAT ARE BIG VALUES:
