

LAW OF LOCATIONS.

VALUABLE HINTS TO PROSPECTORS ON STAKING CLAIMS.

What the Federal Statutes Require to Make a Location Good-Investors in Middle States Willing to Buy Washington Mining Property - Good Mineral on Orcas Island.

Much uncertainty appears to prevail in the minds of prospectors in regard to what constitutes a sufficient notice of location to hold a mining claim under the United States laws, and some communications have been received by the Post-Intelligencer on the subject. Some claims on Miller river and near Index are being jumped and the contesting claimants, instead of going to court, are trying to do, are trying to hold the claims by right of possession, thus involving risk of bloodshed. As the readiest means of settling these doubts, the following statement of the law was obtained from F. F. Reynolds:

It should be remembered by all prospectors, in staking off mining locations, that it has become the settled law of the country that sections 23 and 24 of the United States revised statutes must be complied with. They require that the certificate of location filed for record must contain such a description of the claim by reference to some natural object or permanent monument as will identify the claim. The reference to a natural object or permanent monument must be such as to furnish reasonable certainty that the notice of the claim has been and could not well be changed. The superficial area, as given in most mineral location notices, is in itself insufficient. A statement that this claim is on the south side, or the north side of a certain mountain or stream, and about a certain distance from a certain natural object will not be sufficient. A permanent monument may be erected for the purpose of tying the claim to it, but then the courses and distances from such monument to the discovery stake, or some other object on the ground, must be stated with reasonable accuracy.

The Supreme court of Idaho, in the case of Brown and others against Levan, decided by Morgan, chief justice, on June 1, 1896, and reported in the fourth Pacific Reporter, page 661, holds that it is the duty of the court to give mining notices and records liberal construction to the end of upholding locations made in good faith, where the description of the location is to a natural object or permanent monument of such a character that a mining engineer could not find the claim from the records, and that the claim may be located almost anywhere to suit the ground or to cover ore that may have since been discovered. It is clearly such a notice as cannot furnish the foundation for a valid location and such a notice or certificate is void against subsequent valid locations.

The same principle is held in the case of Sisson vs. Barnard, fourth Pacific Reporter, page 705, and in the case of Mining Company vs. Drake, eighth Colorado, page 389, and Dillon vs. Bayless, Montana, twenty-seventh Pacific Reporter, page 726, and in Drummond vs. Long, ninth Colorado, page 540, as well as in the directions of the supreme courts of all the mining states.

It will be noticed from the foregoing by prospectors in this state, where the question of the sufficiency of a mineral claim has not yet been determined, that the universal rule in all states where the question has been passed upon is that a mineral notice or certificate of location, which is the same thing, must be such a notice that a mining engineer can take a copy of the notice and go into the mining district where the claim is located and from the description therein given be able to find the claim from some natural object or permanent monument. Otherwise the notice is void, and void-not a notice which is not in compliance with the requirements of the law, even though posted on the land staked off, and the superficial area described, be any bar to a subsequent location, providing such notice does not comply with the requirements of sections 23 and 24 of the revised statutes, except perhaps for the period of thirty days in which the prospector has to complete his location and the filing of his notice under the laws of this state. Regarding this state and running 300 feet north for the northeast corner and thence 1,500 feet east for the southeast corner and so forth, thus giving the superficial area, is not a sufficient notice as required by the revised statutes and is absolutely void as a certificate of location. A notice of this kind will not afford a basis for a relocation notice, the supreme courts of the several states having held that, if the original certificate of location is void under sections 23 and 24 revised statutes, it will afford no basis for a relocation notice.

TO TUNNEL ON THE MYRTLE C. Beginnings of a Good Camp on Gold Mountain, Near Darrington.

SPECIAL DISPATCH TO THE POST-INTELLIGENCER. YERRETT, June 4.-The Burns Mining Company has let a contract for a tunnel on the Myrtle C. ledge, 1,200 feet above the Sixk river. This property is on Gold mountain at Darrington, thirty-two miles east of Arlington and twenty miles from Sand City on the main road to Monte Cristo. The ledge is twenty feet wide, capped in places with slate and exposed for several hundred feet in other places, extending up the south side of the mountain, and has been traced on the other side. A surface assay ran \$3 gold, \$102 silver, \$1807 copper. The Justin group, owned by the same company, is on a similar parallel ledge. The Bonanza Queen people have bonded the adjoining property of Mr. Emmons and others. Judge Maxwell of Whatcom has recently bonded a group of claims on the Myrtle C. ledge, adjoining the Emmons properties, for \$20,000.

It is expected that there will be a very good sized mining camp on Gold mountain this summer.

GOOD MINERAL ON ORCAS. Believers Converted by Ledges Cropping on Water's Edge.

SPECIAL DISPATCH TO THE POST-INTELLIGENCER. OLGA, Wash., June 5.-Some of our local experts with a smattering of old-time mining lore and practical experience, who occupied the evening of last night at the house of one of our friends, under their very feet, the class to whom distance always lends enchantment, and who four months ago predicted a fat failure of all who put labor or money in prospect holes on Orcas, have since had occasion to revise their theories. Most noteworthy deposits, I say, that the mineral rock on the surface was deposited here along with some gray granite boulders by glacial action.

Some of these new converts have now gone to the other extreme and have located claims which they estimate to contain more wealth than the mines of Alaska, and that all the leads from all the known mineral belts center on their respective locations.

Under ordinary circumstances these new converts would have killed the efforts now being made by the Chamberlain's Cough Remedy.

Chamberlain's Cough Remedy is a pleasant expectorant. It is intended especially for acute throat and lung diseases, such as coughs, colds, croup and whooping cough, and is a most excellent medicine for the relief and cure of these diseases. For sale by druggists.

being made to develop, but it becomes more evident every day that confidence in our mineral resources is not misplaced. Mr. Harrison, assessor of this county for two terms, and Michael James located last week what seems to be, so far, the best find on the island. They have a three-foot ledge of soil, fine-looking quartz that assays \$23.62 gold, silver and copper, on the surface. This is on the Kinloch homestead, which they have secured by a fifty-year lease and is situated about midway between Olga and East Sound and nearly opposite the Port Langdon lime quarries across the bay. The lead runs in a north-west and southeast direction, has one good vein about 100 feet long, and is about seven feet from the water's edge. Mr. Harrison is now in Seattle to secure capital with which to push development.

E. P. Newhall, president of the Cascade Bay Lumber and Manufacturing Company, who has from the first been a consistent believer in the mineral resources of this island, has lately secured an interest in the Blakeley Island, an immense ledge which crops out on the beach like the bow of a ship about forty feet high. This is a solid ore, and a freshly broken piece looks like a piece of broken casting, but exposure changes it to a copper color. Reports are that it assays from \$4 to \$18, but nothing reliable can be learned about it.

THEY ARE WILLING TO INVEST.

Middle States People Look Favorably on Washington Mining Properties. Jasper Compton found the outlook good for securing investments of capital in Washington mines, during his recent trip through the principal cities of the Mississippi and Missouri valleys. "I found people willing to invest in Washington mines, not stocks-and also to take up good prospects under a development bond, but they will not pay a mine price for a prospect. Negotiation always figures in a deal, in fact the first question asked is 'How far is it from transportation?' The preference as to the class of ores goes by the experience of the buyer or broker in former investments. One man has had success with lead and silver and prefers that class of ore, another prefers sulphide ore and another copper, all for the same reason.

"Yes, the fact of the state having gone Populist cuts some figure, but the remark made on that subject was: 'We realize that your state was Populist, but we do not believe that it is Populist. It only went that way through a combination of circumstances which you could not help, and we look to you to redeem it.'"

The Orphan Boy Scandal.

New developments in the Orphan Boy scandal in British Columbia have been brought out in a suit of J. W. Haskins to have the company wound up and its assets distributed. J. W. Haskins, the superintendent of the mine, who received a month from the organization of the company, obtained judgment against the company and had its property sold, but it is alleged that the day before the sale he sold 25,000 shares of common stock to Mayor Templeton, of Vancouver. The secretary of the company says no treasury stock was sold, because the common stock was sold at a lower price. The stockholders have appointed a committee and raised a subscription to assert their rights.

Seattle Men on the Swank.

F. W. Clayton is at Liberty beginning work on the two claims of the Utah Mining and Milling Company in the Swank district, five miles north of Liberty, and writes encouragingly to E. Morrester, the secretary of the company. He has six men employed in driving a main tunnel on the ledge at a depth of 49 feet from the summit of the mountain, in which depth will be gained very rapidly. The ledge is six feet wide, and the croppings with a syenite hanging wall, and the foot wall decomposed, and assays range from \$11 to \$45 on the surface.

Free Milling Ore at Silverton.

The Double Eagle Mining Company has out a trail from the Deer creek road, built a camp and begun development on its camp on Coal creek, three miles from Silverton. The ledge is ancient gray quartz carrying free gold, between walls of gray slate and crops thirty feet wide, being traceable for nearly a mile. The slate is backed on the west by a sixty-foot ledge carrying copper ore and on the east by a serpentine dike. The company is driving a cross cut for the largest cropping.

A New District on the Boundary.

Prospectors are now pouring into the Fish creek district, on the Canadian side of the boundary, east of the Columbia, where the first discoveries were made in April by George P. Jones and William G. Good. The formation is porphyry and slate, with the ledges in contact, and the ore is gray copper, running high in silver and carrying some gold. The Glanston and Chihuahua groups have been bonded to O. W. Chamberlain, of Petrolia, Ont., and A. McGarvie, of London.

Developing Deer Creek Water Power.

SPECIAL DISPATCH TO THE POST-INTELLIGENCER. SILVERTON, June 2.-The Deer Creek Company is asking bids for a dam at the lake, so as to hold water to run the power mills. It is also ready to contract for a quarter of a mile of purchase for the road to the St. Louis. Some large samples of copper ore are being brought in from the Grizzly. Pieces of rock from the 100 pound weight are being taken out, showing that this ledge has size as well as value.

Through the Gap on the Innaugural.

SPECIAL DISPATCH TO THE POST-INTELLIGENCER. HAMILTON, June 4.-Last night the men working on the Inaugural Gold & Copper Mining Company's mine broke through the gap, tapping at a depth of about sixty or sixty-five feet, where a pronounced good ore, though no assay has been made. A new company has been organized at Silverton, by Henry Quinn, C. Kelly and others which will develop a few locations near that place.

decomposed quartz, and one ledge is twenty-two feet wide, assaying \$9 and upwards in gold, while another is six feet and assays \$3 to \$4 gold.

"Mining in the Pacific Northwest."

This work is a complete review of the mineral resources of Washington and Southern British Columbia, comprising 36 pages, with twenty-eight maps, and several mining districts. It gives, in addition to a general description of the route into each district, a detailed description of each district, including the general features, steamboat lines, wagon roads, trails and mining locations. It is up-to-date, and is the only work of the kind in existence dealing with mining in Washington. It was edited by K. K. Hodges of the Post-Intelligencer staff, and published by that journal. On sale by all booksellers and news agents and at the Post-Intelligencer business office, Price, 20 cents, by mail, 25 cents, to any point in the United States or Canada. Send subscriptions to Manager "Mining in the Pacific Northwest," Box 27, Seattle, Wash.

Mining Notes.

Another big deal in Noble Five stock is on foot in Spokane. The Cliff at Roseland has begun shipping a car load of ore daily. A 3-foot ledge has been uncovered on the Sawtooth at Camp McKinney.

Henry Blackwood, of Tacoma, has been looking around the Silverton district, and surveys are being made for a tramway on the Payne group, in the Slocan country.

The Free Silver group on Boulder creek, near Salmu, B. C., has shown up gray copper. The Hall mines smelter is in blast again, treating War Eagle and other custom ores.

An average of twelve assays from the 85-foot shaft on the Great Western, at Roseland, is \$40. The Jumbo at Roseland has 30 feet of solid ore in its tunnel, with over two feet of tellurides.

Eight feet of solid ore has been struck in the Nellie Rly, near Salmu, B. C., showing free gold. A movement is on foot in Port Townsend to cut a trail into the new district in the Olympics.

An ore chute five feet wide, carrying free gold, has been struck in the Fern, near Nelson, B. C. The Star, at Alsworth, has shown up eighteen liches galena, carrying \$1 in silver and lead.

A five-stamp mill is being taken to the Mountain Goat Canyon creek, at the Skagit's headwaters. Native silver has been struck at a depth of 30 feet under iron capping on the Iron King lead on the coast.

J. W. Fairchild, of Portland, has been at Silverton, looking at the New Seattle, in which he is interested. The Joe Dandy Company at Fairview has 30 men employed at various points on its group, sinking and tunneling.

The Adams Company has let a contract for considerable work on its group on Kruger mountain, British Columbia. A shaft is down 60 feet on the Minnehaha, near McKinney, and it is in nearly the whole width, similar to the Cariboo.

A test shipment of two tons of ore has been made from the Dollarocracy on the Pend Oreille river to the trail smelter. F. O. Downing, of Portland, Or., a member of the syndicate which proposes to erect a smelter in this city, is at the Butler.

J. B. Dexter has struck a six-foot ledge carrying free gold on the Mammoth, on Geneva mountain, four miles south of Loomis. The installation of a compressor plant at the Cariboo, near the trail smelter, is another boiler necessary and it is being shipped in.

Work is said to be impending on the Freddie Lee, one of the best pioneer properties in Slocan, formerly owned by James P. Wagner. A Le Roi syndicate has made the final payment of \$4,000 on the Sullivan group, Fort Steele district, and is sinking on the silver lead ore.

Four converging streaks of ore in the tunnel of the Silver Vein, near Roseberry, Slocan district, assayed 74.6 ounces silver and a trace of gold. About 25 men are at work on Goat creek, at the Methow's headwaters. The Bullion has shown up gold and copper ore at a depth of 35 feet.

The Golden Crown, Wellington camp, Boundary creek, has shown up 4 feet of ledge to 5 feet of solid ore. It is being developed by 15 men. The machinery for the 20-stamp mill for the Timbers at Fairview, B. C., has arrived at Penitence, and is being hauled to the camp, 23 miles distant.

The tunnel of the Columbia & Kootenai at Roseland, in 80 feet still in ore, and has a depth of 40 feet at the face. Regular shipments have begun. The Rose Point Mining Company is arranging to pool the stock until the treasury stock is sold, and the mine, near Boundary, Wash. developed.

The final payment of \$12,000 has been made on the Argo, in Slocan, by John A. Whittier, Jack Thompson, William Lindstrom and Donald. About twenty men are at work on claims on Gold Hill, Pierce county, to which a depth of 100 feet has been reached, the state road at the rate of a mile a day.

The water has been pumped out of the 120-foot shaft on the Little Donald, at Alsworth, in 80 feet, 12 inches of high-grade galena at the bottom. With a scraper W. P. Russell has uncovered a ledge of 40 feet of solid ore, one carries gold and copper, the other lead and silver.

The Smuggler Company at Fairview, B. C., has leased the Stratageme mine and will treat ore from a tunnel at a depth of 120 feet on the ledge, which has eight feet of solid ore. L. K. Armstrong, of Spokane, editor of Mining, and secretary of the Northwestern Miners' Association, has just returned from a tour of the mines around Baker City, Or.

From May 11 to 27, 413 new mining locations were recorded at Nelson, B. C. One location has been made on the mountain ridge across the Kootenai river from that town. A sample from a crosscut in one of the Whiskey Hill tunnel group of claims, near Loomis, is said to have assayed 32.3 ounces silver, \$18.82 gold, and this is said to be an average of the ledge.

The crosscut on the Alibi at Roseland has been suspended pending the installation of a chimney. The shaft is down 75 feet with a depth of 70 feet below the old workings, which was \$34.40 gold.

The Hercules on Tiger mountain, Cour d'Alene, has four feet of chloride ore, carrying \$8 to \$20 ounces silver, 30 ounces lead and a little gold and copper, and will pack it to the railroad. Several workings on the Centre Star, at Roseland, for a new shaft has uncovered a solid body of ore four or five feet wide, and is believed to be the same body as the workings cut 300 feet below.

Development is now spreading to the Deer Park district, 40 miles north of Trail, B. C., where the Blue Bird group of claims, carrying 285 to 125 ounces silver, \$12 gold and 2 to 5 percent copper. A tunnel on the Blue Bird group, carrying 200 to 250 ounces silver, 20 ounces lead and the ore will concentrate 20 into 1.

The St. Anthony shaft in Fish Lake district, near Silverton, has uncovered a ledge carrying black sulphurates and some gold between slate walls. The latest assays show \$14 gold, 24 ounces silver and some lead, and the ore will concentrate 20 into 1.

Work has been received here that a rich strike of gold-bearing rock has been made on Takush harbor. Those interested are keeping the matter quiet at present, but already two different parties have left Vancouver for the scene.-New Westminster Columbian.

Over the new town on Quartz creek in the Salmon river district, of British Columbia, has a population of 500 and is being developed by the Quartz Creek group of claims, which will give a depth of 70 feet below the old workings and dispose with the tramway. The ore body is 40 feet wide.

The crosscut on the Red Mountain, at Roseland, is in 43 feet and has cut a small ledge, one to two feet wide, and not yet reached the main ledge. Exploration of the mountain shows a good ore body in the main ledge.

The St. Anthony shaft in Fish Lake district, near Silverton, has uncovered a ledge carrying black sulphurates and some gold between slate walls. The latest assays show \$14 gold, 24 ounces silver and some lead, and the ore will concentrate 20 into 1.

THIS IS YOUR LAST CHANCE

To get the very finest Footwear at prices never before offered in Seattle. In order to reduce the size of the stock before it is sold in lump, we are making a genuine cash

Discount of 20 Per Cent.

On all purchases. This applies to our entire stock, consisting of the very finest makes in the world, such as Johnston & Murphy, Laird, Schober & Co., Stroug & Garfield Co., J. J. Letterman Shoe Mfg. Co., and others. Brand-new goods, made up in all the latest and most fashionable shapes and colors.

FEAST OF MELODY.

SUCH WAS THE FIRST OF THE THIRD SEASON OF P.-L. CONCERTS.

Hundreds of Music-Lovers Thronged the Streets in Front of the Post-Intelligencer Building to Listen to the Strains of Harmony-Bandmaster Wagner and His Artists Receive an Ovation-The Programme Contained Selections for All Tastes, With a Plentiful of Good Music-The Season Successfully Inaugurated.

Hundreds of people, filling Cherry street from First to Second avenues clear to the walls of the buildings on either side, and crowding the sidewalks until it was impossible to get through, heard the first of the full season of concerts given by the Post-Intelligencer last night. Threatening as the weather was after the sultry day, the crowd stayed until the notes of the last number, "Auld Lang Syne" had died away. In this fact, perhaps, lay the best compliment that could be paid to Bandmaster Wagner and to the Post-Intelligencer management, and the genius of some master, that they by their applause and hearty enjoyment of the entertainment.

People may differ on political questions, and the strife and turmoil of daily life in a large city sometimes generates a spirit of selfishness and want of fellow feeling, but when a big crowd of people get together to listen to the sublime harmonies of the genius of some master, these things fade away, and they are bound together in a tie most pleasant and lasting as well in its good effects because of the benign influence set at work.

This is what makes the Post-Intelligencer concerts valuable to the masses of the people, and in their pleasure the paper finds its full reward. The programme prepared by Bandmaster Wagner, taken largely from suggestions and requests for special numbers addressed to the musical editor, was well calculated to inaugurate the third season of concerts. Most of the music was chosen to satisfy not only the popular but the cultivated taste, and no devotee of what is known as "popular" music went away without enjoying all of the heavier numbers, for the reason that they are familiar to all musical audiences.

"Theodore Wagner's march," by Charles E. Bray, written in honor of the bandmaster of the First Regiment band, was the opening number. Next came the Austrian national anthem with the beautiful variations by Haydn. The number of possessed classical attributes enough to satisfy the most fastidious and gave the reed choir an opportunity for some fine playing. It is in the reeds that Wagner's band is strongest, and this is said not without paying due consideration to the brass, which rendered a splendid and eminently satisfactory accompaniment and ensemble.

The popular "Louisiana Lou," with its suggestions of French comic opera, came next, preceding the stirring overture to "William Tell." The overture was played in a masterly manner, equal to any of the celebrated military bands of the East, taking account, of course, of the difference in numbers. The pastoral movement was given a beautiful rendering, while the finale went with dash and spirit.

De Koven's "Oh, Promise Me" met with the reception its popularity among the young people deserved, while "Bohemian" was roundly applauded. Perhaps no number on the programme appealed to more people than did Sousa's splendid "King of the Tunes," played in a masterly manner, equal to any of the celebrated military bands of the East, taking account, of course, of the difference in numbers. The pastoral movement was given a beautiful rendering, while the finale went with dash and spirit.

De Koven's "Oh, Promise Me" met with the reception its popularity among the young people deserved, while "Bohemian" was roundly applauded. Perhaps no number on the programme appealed to more people than did Sousa's splendid "King of the Tunes," played in a masterly manner, equal to any of the celebrated military bands of the East, taking account, of course, of the difference in numbers. The pastoral movement was given a beautiful rendering, while the finale went with dash and spirit.

Lovers of pure melody were delighted with the interpretation given to Donizetti's immortal sextette from Lucia. This splendid number is well adapted to the purposes of a military band, and at no stage of the concert was the ability of Wagner's artists in ensemble playing more conspicuous.

The baritone solo, "Rocked in the Cradle of the Deep," by Sig. A. De Caprio, was among the favorites of the evening. De Koven's ballad, given in response to the encore, found a responsive worthy the excellent rendition it received.

The other numbers, each being well received, were the intermezzo from "Cavalleria Rusticana," a selection from "The Wizard of the Nile," a paraphrase of "Ben Bolt," Asher's splendid march, "Cervus Alces," and the potpourri of national airs. Among the crowd of listeners were many women, who, indeed, predominated. Many of them listened intently to every note in the programme, while others found pleasure in promenadeing with their escorts and doing a little occasional shopping. For freight rates inquire Capt. Frank Worth, harbor-master's dock, foot Spring street.

Wagner's band today, Madison park. "All of the orders for material for the new equipment of the Columbia & Puget Sound railway will be sent out by Monday," said C. J. Smith yesterday. "The wheels and axles will come from Chicago. The cars will be built on the tracks, and we will build a long siding somewhere out near Bruhn's brewery. As the cars are finished they will be taken out there and stored. I will save \$5 a car by building them here. Material is very cheap now. I have not ordered steel wheels, because for our work I consider a good cast-iron wheel, chilled, the best. We have such grades that with sand we would soon burn up steel wheels. We can build our own cars cheaper than we can buy them East and haul them out, and economy was our first idea. The old coaches will be mounted on standard gauge trucks and will answer very well for the present."

During the month of May 2,500 riders passed through the tollgates, and the average daily travel increased toward the latter part of the month. The new park just south of the county hospital will be finished in two weeks. The plans call for quite an elaborate system of paths and walks. Mr. Ames says that he desires it distinctly understood that the park will be conducted so that a husband will not hesitate to stop there with his wife. A new iron roller will be cast to be used in hardening the cinder path in front of the county hospital.

MARQUETTE Mich., June 5.-Snow fell here for half an hour last night. A cold rain fell nearly all day preceding it.
