HEAVY DRAYING I am prepared to do all kinds of draying at the shortest notice. Have also on hand a large stock of the best heavy draying mules. JOHN BOST, Seattle.

CLEVER CROWS. I have not said anything about the crows, which are a feature of Yedo, and one which the colonist would willingly dispense with. There are millions of them, and in many places they break the silence of the silent land with a Babel of noisy discord.

They are everywhere, and have attained a degree of most unyieldable pertinacity, mingled with cunning and sagacity which almost puts them on a level with man in some circumstances. Five of them were so impudent as to alight on two of my horses, and so be ferried across the Turpentine.

In the inn-garden at Mori I saw a dog eating a piece of carrion in the presence of several of these voracious birds. They evidently said a good deal to each other on the subject, and now and then one or two of them tried to pull the meat away from him, which he resented.

At last a big strong crow succeeded in tearing off a piece, with which he returned to the pine where the others were congregated, and after much earnest speech they all surrounded the dog, and the leading bird dexterously dropped the small piece of meat within reach of his mouth, when he immediately snapped at it, letting go the big piece unwisely for a second, on which two of the crows flew away with it to the pine, and with much fluttering and hilarity they all ate, or rather gorged it, the deceived dog looking vacant and bewildered for a moment, after which he sat under the tree and barked at them vainly.

A gentleman told me that he saw a dog holding a piece of meat in like manner in the presence of three crows, which also vainly tried to tear it from him, and after a consultation they separated, two going as near as they dared to the meat, while the third gave the tail a bite sharp enough to make the dog turn round with a squeal, on which the other villains seized the meat, and the three fed triumphantly upon it on the top of a wall. In many places they are so aggressive as to destroy crops, unless they are protected by netting. They assemble on the sore backs of horses, and pick them into holes, and are mischievous in many ways. They are very late on going to roost, and are early astir in the morning, and are so bold that they often came 'with many a stately flit and flutter' into the verandah where I was sitting. I never watched an assemblage of them for any length of time without being convinced that there was a Nestor among them to lead their movements. Along the sea-shore they are very amusing, for they take the air in the evening, seated on a sand bank facing the wind with their mouths open. They are threatening to devour the settlers, and a crusade is just now being waged against them, but their name is Legion.

THE NEW FEEL. What keeps the majestic ball hot and bright? This has greatly engaged physicists and astronomers, and various have been their theories.

If the sun shone only by mere combustion of its own material, the calculation is that its fire would last five thousand years. It is very kind of Dr. Siemens to come forward with an entirely new theory, which holds out the hope that the men of science are all wrong with their dismal foreboding, and that the creation is not schemed on the poor footing of a German stove or a suburban gas company. The learned ironmaster and physicist believes that the sun may very well go on illuminating and warming our world and the family of sister planets for an indefinite, if not infinite, time. He supposes interstellar space to be filled with an extremely attenuated hydrogen, and interplanetary space with denser gas, albeit more rarefied than the atmosphere drawn round each world. The sun, he thinks, whirling on its axis, draws into its poles the thin hydrogen, hydrocarbon, and oxygen of our sphere, and these, being kindled, are projected outward at his equator into space. The accepted view is that the heat and light there developed and radiated perish, as far as we are concerned, except for the small portion arrested by each solar satellite; but Dr. Siemens argues that this heat and light do their chief work in decomposing the carbonic oxide and watery vapor which were produced by the kindling at the solar poles, so that the sun itself perpetually renews its own supplies, and renews stores by its energy the waste matter which has fed that energy. The theory is much too technical and complicated to be here discussed, and we should offer a bad compliment to its ingenious author even to attempt such a task. Dr. Siemens, however, has had great experience with the phenomena of radiated heat, and his applications of the new view to the nature of the solar light and of comets is particularly striking. Of course it is startling to hear something in our own system which closely resembles perpetual motion; and those who maintain that everything comes to an end, that all mechanical energy must be gradually degraded and metamorphosed, will be slow to receive the new suggestion.—London Telegraph.

There is a young woman shoemaker in Atlanta. She has a small shop of her own in which she hammers and stitches as deftly as any man in the trade.

A BEAR'S CENSURE. I really think that Bruin possesses the sense of humor at all events his actions point that way, and there is no doubt that he is extremely cunning and observing. I once had an English friend visiting me, who played the flute. He was in the habit of marching up and down, while playing, near a tame bear I had at the time. The bear had a piece of stick about two feet long, which he tossed about for amusement. After a time, he came to handle the stick very much as my friend did his flute. This annoyed my sensitive friend, and in revenge he teased the bear with uncouth noises. Bruin sniffed and whined, and waited his opportunity for delivering a tremendous blow with his paw at his enemy, whose tall hat was knocked completely over his eyes. He escaped being scalped by dropping flat and rolling out of the reach of the bear. This bear spent much of his time in the tree to which he was chained, and when climbing usually got his chain twisted over and under the branches in a most intricate manner, but never failed to take out every turn as he descended. A friend who owned a tame bear told me that for a long time he could not account for the mysterious way in which the poultry disappeared. Observing at different times a good many feathers around Bruin's pole, he began to suspect that the bear was the culprit. Close watching confirmed his suspicions. When Bruin thought he was unobserved he would seize any unfortunate hen or chicken within his reach and devour it; but if any one approached before he could complete the meal he would sit upon his prey until the danger of discovery had passed. He was betrayed at last by the cackling of an old hen that he had failed to silence.

A Doctor's Opinion. Mr. J. L. Knapp, of Santa Clara, Cal., who was cured of acute inflammation of the bladder by Warner's Safe Kidney and Liver Cure, writes: "I could do nothing for him, not one of his old physicians shortly after his recovery, and asked him what he thought of the effect of the medicine. Said Dr. Carpenter: 'I think that medicine one of a thousand the way it has acted in your case.'"

SONA FORTUNATA. I have a beautiful Lapland Soda Fountain of six size and over draught tube and two five gallon copper fountains that I will sell at bargain. It can be seen at my drug store. M. L. KELLY.

HOW TO SECURE HEALTH. It is strange any one will suffer from derangements brought on by impure blood, when Scovill's Sarsaparilla and Syrup will restore health to the physical organization. It is a strengthening syrup, pleasant to take, and the best BLADDER PURIFIER ever discovered, curing Scrofula, Syphilitic disorders, Weakness of the Kidneys, Erysipelas, malarial Nervous disorders, Debility, Bilious complaints, and diseases of the Blood, Liver, Kidneys, Stomach, Skin, etc.

UNCLE TOM'S CABIN.—If you want to save 20 per cent. on wall paper and window glass, go to the new store, Colman's block, Front street, Seattle. m1-1m
