

MARCH, APRIL, MAY.

Paine's Celery Compound Makes People Well!

It Makes Strong Nerves and Pure Blood—It Cures Disease!

It Is The One Remedy That All Schools of Physicians Prescribe.

The Demand For It is Tremendous--It Never Fails To Benefit.

Nothing Was Ever So Highly and Widely Recommended!

First Prescribed by America's Greatest Physician.

It Has Become a Blessing to the Entire Country.

Men and Women in the Highest Stations Publicly Recommend It.

Grateful People Everywhere Heartfully Endorse the Famous Remedy.

It makes people well! It builds up the weakened, shattered nerves; it sends new life and blood through the arteries. Where everything else has failed, Paine's celery compound, the greatest achievement of that giant among men, the ablest physician of this generation, Prof. Edward E. Phelps, M. D., LL.D., of Dartmouth, this wonderful Paine's celery compound has in thousands of cases cured disease. It has freed old age from many of its infirmities. It has made thousands of lives worth living that were once a burden. It has proven itself so easily the greatest of all spring remedies, making the weak strong and the firm well, that in the big cities, New York, Chicago, Philadelphia, Boston, St. Louis, and the rest, the leading newspapers, making their own canvasses, have found that the demand for Paine's celery compound is enormous, as far surpassing that of any other remedy as the curative power of this great compound does indisputably surpass that of any other.

not even good imitators. Paine's celery compound positively and permanently cures nervous debility and exhaustion, Neuralgia, sleeplessness, melancholia, hysteria, and headaches yield to its refreshing properties, all these troubles are directly traceable to the one cause, poorness of the blood and poorness of the nervous tissues. For kidney troubles it is the most infallible of remedies. It owes its unfailing power to check at once the progress of this breakdown among the tissues of the kidneys to its remarkable nutritive efficiency. Just as soon as Paine's celery compound begins its strengthening work there is at once a rallying of all the important organs of the body. The appetite improves, the spirits become more hopeful, the dull pains of disease lessen, sound, refreshing sleep returns, "that tired, worn-out feeling" departs, and the sufferer knows, without being told by a physician, that he or she is getting well. The season of March, April and May—the springtime, when if one can do so he must recuperate his lost strength and get back the health that nature intended for him,—that season is here. It behooves every man, woman and child now to get well. And Paine's celery compound makes people well.

LENTEN COURSE OF LECTURES. Professor Wheeler to Deliver a Course Before the Historical Society. The ladies' auxiliary committee selected from the New Haven County Historical society to prepare some sort of entertainment of historical interest have decided upon a course of six lectures to be given by Professor Arthur M. Wheeler on "The Napoleonic Period from 1795 to 1815." The course is to be known as the Lenten course and will begin Wednesday, March 13. They will be delivered on each succeeding Wednesday until the course is completed, and will be held each time from 4 to 5 o'clock in the Historical society's building. The ladies hope to establish a Lenten course of lectures for each year. The ladies composing the committee are Mrs. Joseph B. Sargent, Mrs. Henry F. English, Mrs. James M. Hoppin, Mrs. Lynde Harrison, Mrs. Arthur M. Wheeler, Mrs. C. Berry Peets, Mrs. W. H. Carmalt, Miss Martha D. Porter and Miss Fannie A. Bowers. Other announcements concerning the lectures will be published later.

DAIRYMAN'S INSTITUTE. To be held at Grange Hall, Waterbury, Next Wednesday. A dairyman's institute will be held at Grange hall in Waterbury next Wednesday by the Connecticut Dairyman's association. The program is as follows: 10 a. m., breeds of dairy stock—their characteristics developed. Jersey—Hon. E. S. Henry, Rockville. Guernsey—F. H. Stadtmueller, Elmwood. Ayrshire—Dudley Wells, Wethersfield. Holstein—Abonzo Bradley, Lee, Mass. Hereford—C. P. Gaylord, Terryville. Swiss—Adna Barnes, Unionville. Devon—J. M. Yale, Meriden. 12 m.—Collation by Mad River grange. 1:30 p. m.—"Composition and Supply of Milk," Dr. E. H. Jenkins, New Haven. 2:30 p. m.—"Feeding and Care of Cows for Milk," B. C. Patterson, Torrington.

LECTURE ON ELECTRICITY.

MR. WURTS OF THE WESTINGHOUSE COMPANY SPEAKS OF "Lightning Arresters"—Highly Interesting Experiments—Some Facts About Electricity—A Big Audience, One of the Largest Ever Seen in North Sheff. Hall.

The fifth in the course of Mechanics' lectures was delivered last evening in North Sheffield hall by Mr. Alexander J. Wurts '83 S., of Pittsburg, Pa. The subject of the lecture was "Lightning Arresters." Mr. Wurts is an authority on this subject, and has invented a number of arresters intended for protection of electric lighting and power currents from direct and indirect damage from lightning discharges.

In his lecture Mr. Wurts said that during a thunder storm their apparatus was frequently damaged on account of the current penetrating the insulation, and that this was done by the current jumping from the wires or terminals the lecturer showed by experiments. At first it was thought that the wires were struck by lightning, and even to-day many think that this is true, but such is not the case. The atmosphere is all the time heavily charged with electricity and wires strung overhead become, so to speak, a part of the atmosphere and this cannot be in the strict sense of the word struck by lightning. It is this fact of the wires being a sort of part of the atmosphere which causes them to transmit to the offices and apparatus any undue charge of electricity. In those early days the apparatus used was not very expensive and there was no necessity of extensive precautions against injury to instruments, but at the present day millions of dollars are invested in electrical appliances and it becomes a matter of dollars and cents when these mishaps occur. So, much science and labor has been used in devising a method of arresting the destructive current. In the earlier history of electricity lightning arresters were attached to the wires, but these generally proved inefficient. The reason of this was that electricity travels over a wire in waves much the same as water when set in motion circles and surges, and unless the arresters are attached at the crest of these electric waves, they will always prove ineffective, and as formerly only one or two arresters were used on a line they hardly ever happened to be at the crest of the electric wave, which is continually changing. Now the arresters are more numerous, several being attached to each line, and the chance of catching the surge right is increased. Mr. Wurts has devoted much time to experimenting to find some sort of arrester which would carry off the disruptive discharges and not at the same time take the dynamic current off on a short circuit. After much experiment he found that zinc, blamuth, antimony and mercury would take off this disruptive current, but would not take the dynamic current, as non-arctic vapors were formed which would not admit the dynamic current. Lightning arresters certainly offer opportunities for discharge, but when this takes with the dynamic current the apparatus is destroyed and power is lost. A system of coils not only protects a liberal distribution of line arresters, but offers the only practical means of protecting widely distributed apparatus, as on trolley and lighting systems. The arresters fail to protect in all cases because of the continual shifting high and low pressure currents, or in other words for a lack of a sufficient number of line arresters, because insulation is defective, and because lightning arresters are not properly installed.

The wires of the Winchester avenue trolley line had been tapped and a current of 1,000 volts, which was necessary to carry out the experiments, was obtained. Mr. Wurts is a member of the Westinghouse Electric and Manufacturing company of Pittsburg and has been awarded the John Scott legacy medal by the Franklin Institute of the state of Pennsylvania on account of his important inventions in electrical machines and apparatus.

The hall last evening was crowded to its utmost capacity, even all the standing room being taken up and many were unable to get in at all.

WALLINGFORD. Spring Has Come—Also the Tramps—Also the Flax Heads—A Tough Point. The spring weather of the last few days has started the tramp out on the road, and the number that apply here for lodging is increasing every day. Last evening about fifty were in the tramp room. Where they all come from is a mystery, although most of them claim that they came from New York. A fat headed adder was killed yesterday near the railroad near the rubber shop. It is seldom that a snake is out of winter quarters on March 1. Michael Purcell's black cocker spaniel was killed by the electric cars on East Center street yesterday afternoon. Frank M. Barber severs his connection with R. Wallace & Sons next Thursday to accept a position as teacher out of town. Simpson, Hall, Miller & Co.'s works are closed to-day. The snow disappeared fast yesterday and the sewers on the plains were carrying off a large body of water. There is a depth of sixty-two inches of water in the gatehouse at Paugh pond, a gain of one inch in a month. Simpson, Hall, Miller & Co. and H. L. Judd & Co.'s teams will shoot in the army this evening. There were six deaths in town during February. Elder North of New Haven will address the local Methodists in O.U.A.M. hall Sunday afternoon at 3 o'clock. James Doolittle is to build a store west of his house on Center street hill. Among other evidences of spring's approach is hook beer.

St. Aloysius Society. A committee has been appointed by the St. Aloysius T. A. B. society to arrange for its annual banquet. The anniversary of the society is April 19, which falls on Saturday. It is probable that the banquet will be held in Warner hall on April 24.

WEDDING MAY TAKE PLACE.

Surrendered by His Bondsman. Wined, March 1.—Patrick J. Burke, the liverman of New Hartford, who deserted his intended bride, Miss Annie Nunan, at the altar of St. Mary's church here last Wednesday, returned to town this afternoon. His appearance in town created considerable surprise. William Nunan, the father of the girl who was deserted, was acting as bondsman for Burke in a case pending against him, and as soon as he returned surrendered Burke to the authorities and was then released of all responsibility as bondsman. Burke secured his father to go on his bond, and he was released from custody. Burke was at the office of Lawyer F. B. Munn here this afternoon. It is said that a compromise of the matter will be arranged and that the wedding ceremony will take place, Miss Nunan agreeing to release the attachment on the lively business of Burke in New Hartford.

Accepted the Scale of Wages. Branford, March 1.—The employes of the Brooklyn-Granite company, which operate here, have accepted the bill presented to them for the scale of wages for the coming year from to-day. The men employed by the Brooklyn Quarry company are members of the stone cutters' union.

Now in Ohio. Ansonia, March 1.—It has been learned here that J. H. Pulford, the physician formerly located here, and who forfeited a \$5,000 bond in the Nellie Nesbit murder case, is now practicing in Norwalk, O. His son, Dr. Alfred H. Pulford, who continued his father's practice here after his disappearance, to-day removed his office to Norwalk, O.

A SHARP SWINDLER.

Obtained a Letter Head Sheet of ex-Chief of Police Hollmann—Forged an Order for Three Watches and Got the Goods and Decamped. Yesterday morning while the janitor of the Benedict building was clearing the office of Charles F. Bollmann and Judge Lucius P. Deming a stranger entered and inquired first for Mr. Deming and then for Mr. Bollmann. The names of both are on the door. He was told that they had not arrived. He then asked where they lived, and on being told said he did not wish to go so far. He sat at Mr. Bollmann's desk, and asked for paper on which to write a note. He was given some of Mr. Bollmann's letterheads and wrote a note. Later in the day a member of a prominent jewelry firm presented one of the letterheads on which was an order for three gold filled case watches, and signed by Mr. Bollmann. The order was shown later to one of the partners of the jewelry firm, who immediately recognized the penmanship. He knew that Mr. Bollmann has a brother-in-law, Mr. Katsch, who is a jeweler whom he would undoubtedly patronize. The matter was reported to the police, and yesterday afternoon one of the watches was recovered at Engel's pawnshop, where it had been pawned. The fellow is described by the janitor as a short, dark complexioned fellow, apparently about twenty-seven years old, about five feet five inches tall. He looked like an Italian or a Jew, but spoke good English. He wore a brown hat. The watches were worth about \$15 each.

RELIGIOUS SERVICES.
