Snap Shots from All Over the Territory.
Marsh & Driscoll, the pioneer stockmen of Southern Arizona, have closed out their cattle to Mr. Phillips, of Idaho, for \$50,000 net.
Pima county's black marble promises to become famous, says the Star. The quality is of the finest and quantity apparently inexhaustible.
Tucson has the largest and most comprehensive public library of any city in the territory. In fact, it is much more valuable than the territorial public library, says the Star.
The Maricopa county farmers are rejoicing over increased prices received for their products. Hay in the stack has gone up to \$6.50, barley \$1.05 and beef cattle 3 cents on the hoof.
The Star says: The board of supervisors of Pima county should publish their proceedings. The public is anxious to know how they are disposing of the county funds.
Forty-six carloads of cattle were shipped from Tempe in less than two weeks. Tonto Basin, Gila county, is supplying a great many of the cattle shipped from the Salt river valley.

The demise is reported of the daily Border Vidette after a precarious existence. Daily newspapers are of little advantage outside of Tucson and Phoenix, and there are too many dailies in those cities for the good of the publishers.
There have been 1277 convicts sent to the Territorial prison since that institution was established. Of the whole number only 53 are credited to Gila county, but then there were probably that many more offenders who should have gone there.
And now it is alleged by the Star, and seems a reasonable presumption, that the tunnel driven under the Yuma prison was not for the purpose of enabling convicts to escape but to allow the unfortunates on the outside to break in where comfort and good cheer are abundant.
The Phoenixians have begun their "fine work" on the legislature, every member of which received a free ticket to the ball and banquet at the Adams Hotel on the 19th. The editor of THE SILVER BELT received an invitation to attend and swell the receipts by the payment of five dollars.

Governors reports "come high but we have to have 'em." The Star is informed that 15,000 copies of the governor's report to the secretary of the interior for 1895 cost the territory less than \$1200, and that 10,000 copies of the governor's report for 1896 cost the territory over \$2400.
A party of lion hunters recently left Tempe to hunt the king of the forest in his lair, in the neighborhood of Silver King. We are not apprehensive for their safety, but should a lion, perchance, cross their path, we hope he will prove a kindly beast, and like Bottom, in "A Midsummer Night's Dream," "roar them as gently as any sucking dove; an't were a nightengale."
Governor Franklin evidently believes that "a fox is not a fox at all which trusts alone to one poor hole." He has taken up the McKinley prosperity refrain and is quoted by the Be publican as predicting "that the whole country is approaching an era of the greatest prosperity it has known in years, perhaps greater than it has ever known. Certain fixed financial conditions have already established a confidence which has never been felt before, and as soon as tariff matters are settled we may expect to see a wave of prosperity." Let 'er come.
The tax payers of this county, through their representatives, the board of supervisors, have entered into a contract with the law firm of Herndon & Norris to assist in the defense of the suit against the county for the recovery of principal and interest on the Yavapai county railroad and redemption bonds, the consideration named being \$6000, of which the sum of \$1500 is paid down and the balance of \$4500 on or before Dec. 31, 1897. It is stipulated that the further sum of \$8000 shall be paid at the termination of the case in favor of the defendant, to be paid only in case the suit is decided in favor of the county. A further allowance for traveling and other expenses not to exceed \$300 is stipulated in the agreement. The agreement stipulates that Herndon & Norris shall continue the defense until said action is finally determined.—Prescott Courier.

A statement of Maricopa's financial condition has been completed by W. C. Foster, clerk of the board of supervisors. The bonded indebtedness of the county, which has been refunded by the territorial 5 per cent bonds, is \$267,636.43; the county bonds not refunded, bearing 7 to 10 per cent and maturing at periods between 1898 and 1915, amount to \$38,000. The school district bonds aggregate \$84,200. They run from four to twenty-six years and bear interest at the rate of 6 and 7 per cent. The property which the county has to show against this indebtedness amounts to \$311,580.88. Of this is \$108,180 in cash. The rest consists of water rights, real estate and improvements, the most important item of which is block 76, city of Phoenix, which, with its improvements, the court house and jail, is valued at \$175,000. Another statement will be shortly issued of the indebtedness of the county not bonded and of other matters connected with its finances. There is money, though, in all funds pay warrants issued against them except the road fund. The statement shows the tax rate to be \$2.21-72 for territorial purposes and \$1.29 for county purposes.—Republican.

IN A NEW ROLE.
"Col." Francis Nelson, Late Tailor and Electrician in Globe, Turns Cuban Patriot.

The meeting to be held in Music Hall last evening by Col. F. Nelson, on which occasion the claims of the Cuban insurgents to assistance from Los Angeles people were to be exploited, was not held.
There was no meeting. Nelson engaged the hall several days ago and advertised that he and others would speak. But the rent for the hall was not forthcoming; Nelson went to San Diego "on very important business," and the managers of the hall refused to open the doors until some responsible person guaranteed the payment of the rent. No such person appeared, and the people who flocked in the hallway and upon the stairs were disappointed in their expectations of hearing a grist of eloquence about the Cubans and their woes. Nelson says he will return next Thursday.
Nelson's behavior has been peculiar, and those who have seen most of him are not certain what his intentions were. So far as can be learned, he has not collected money, unless he sold a few tickets in advance for the lecture, and nobody at the hall made any complaint on that score. He induced P. J. Duigan, an elocutionist, to agree to deliver the lecture, and Mr. Duigan, because of sympathy for the Cubans, was to perform that service without charge. Another man was to show stereopticon views of Cuba, and he spent some time and money in preparing the views. He is "out" not much, but Nelson is not "in" a cent on that part of the show that failed.
It may be set down as certain that Nelson is not an officer of the Cuban army and never fought under the Cuban flag, for he could not describe the topography of battlefields where he pretended to have fought, and did not even know the Cuban flag, except from pictures. He may be a recruiting agent for the junks, and he may return on the 14th as he promised Mr. Duigan. And again he may not.—Los Angeles Times.

Edison on Diamond Making.
Thomas Edison, in an interview with a representative of the New York Herald, lately claimed to have anticipated Prof. Moissan in the manufacture of diamonds. He said: "I succeeded in producing infinitesimally small diamonds—diamond dust, in short. These were true diamond crystals I ascertained by sweeping them upon a bit of leather, when I found they would cut into a sapphire. I see that Prof. Moissan has succeeded in making rather larger ones. But all these experiments were with me simply a scientific pastime. The production of gold and of diamonds would be of no practical value to the world unless, indeed, the diamonds were black; then I'd jump at them like trout to bait. No white diamonds for me, but niggers; the blacker, the harder, and the uglier the better. That would be worth while. Black diamonds are of enormous practical value. If we could get enough of them at low enough prices we could cut canals right through miles of solid granite. But white diamonds would be of no use to me. And if the time ever comes when white diamonds can be produced by shovelfuls in a chemical furnace, they couldn't be of any use to anybody. Not all the law-makers in the world could make them worth more than 50 cents a peck. And it's the same with gold. I believe it is not only a possibility but a probability of the future that we will discover a process of transmutating the baser metals into gold."

Royal Baking Powder
ABSOLUTELY PURE

MINING NOTES.

Reports of great prosperity come from all the copper camps in Arizona.
Over half the silver produced in Arizona last year came from the county of Mohave.
Lewisohn Bros. have seventy-five men at work in the Rosemont copper mines and expect to increase the force.
The Congress mine is a notable example of successful deep mining in Arizona. The shaft is now down 1700 feet and is all the way in pay ground.
The Mining and Scientific Press says: A nugget weighing sixty-four ounces was picked up last week in southern Oregon, but part of it was quartz and its value in gold was about \$500.
Fortune has smiled on Dick Holmes, late a dishwasher in Coffee Al's restaurant, Phoenix. He has received \$5000 cash for his interest in an onyx mine north of Phoenix.
According to the last estimate of the director of the mint in Washington the product of Alaska in gold in 1896 was \$3,249,000, as against \$1,615,300 in 1895, and in silver 77,300 ounces.
The Prescott Courier reports that Col. Brodie has a force of thirty men at work reconstructing the Walnut Grove dam. They are sinking eight feet into the bed rock to secure a strong foundation.
The Anaconda Company owns over 100 locations at Butte, Mont., and has expended over \$90,000,000 since 1881. An average of 2500 men are employed. The output of copper for 1896 is estimated at 130,000,000 pounds.
The production of aluminum shows an increase of 400,000 pounds over that of 1895, the total for the year being 1,300,000 pounds. The production continues in the hands of a single company, the Pittsburg Reduction Company.
The secretary of the interior has affirmed the decision of the commissioner of the land office in the case of Joseph L. Giroux vs. George H. Schuman, involving the claim to the Tough Nut lode claim in the Prescott land district, which was on appeal by the former.

The manager of one of the largest Utah smelters says that he believes that in a very short time prices will advance, and that the advance would be to a figure which will justify the producers of silver-lead ores in again going forward with their energetic extraction.
It is reported from Calumet, Mich., that the Calumet & Hecla Company will soon sink three new shafts on its part of the amygdaloid vein, which a drift, three years ago, showed to be about as rich in copper ore as the same vein in the Osceola mine. These new shafts, with the new Red Jacket shaft will, it is said, increase the product to 130,000,000 pounds of copper a year.
It is reported, and believed, that one day last week a sixteen pound nugget of gold was taken out of the lower workings of the Grand Central mine, at Minas Prietas. When questioned none of those in authority will admit, nor will they deny, and they always look as if they had much they could say about it if so disposed. A nugget of that size would have a value of about \$3800, or \$7500 in Mexican money.—Oasis.

The question of holding mining property in different parts of the world varies. As is well known, the United States requires the owner or holder of a mining claim to perform annually on his unpatented claim \$100 worth of work. In Mexico concessions are sold for working mining claims, and the holder is required to pay a stipulated amount of money annually to the government. In Australia, under the laws of the colony, the holder of a mineral lease from the government is bound to keep at least one man at work on each three acres included in the lease. Although a large number of miners have gone to the colony during the past two years, so many of them are prospecting or locating claims on their own account that it is difficult for the lease holders to find men to do the necessary work.
Fool's Gulch, five miles east of Congress, is one of the new mining camps of promise in Arizona. The name is taken from the character of the hills that are covered with big granite boulders, supposedly entirely barren and destitute of mineral, says a correspondent of the Gazette. Thus is theory again overturned and further evidence furnished of the fact that "gold is where you find it." The mine owned by the Planet-Saturn Mining Company is a gold formation similar to the Congress, and supposed to be the same ledge. The mill is a cyanide one of 75 tons a day capacity, and is the most complete one of the kind in Arizona. The roaster is a new patent by Horace Brown, and does its work satisfactorily. There are 140 men working in the mine and mill and over \$10,000 paid out every month. The population of Fool's Gulch is now about 400.
The Citizen states that Andy Collins, the Mammoth mine foreman, was instructed by wire to go to Denver to meet Arthur L. Pearce, chief engineer of the company, for consultation in regard to the commencement of work on the mines. While in Denver Mr. Pearce will contract for the erection of a 50-stamp mill to be located directly at the mines, utilizing in its construction such parts of their present mill as may be available. In addition to the Mammoth lead the company recently purchased from Geo. N. Fletcher the Collins group of mines, which run parallel to and join the Mammoth on the west, and the company as now organized is called the Mammoth-Collins mines, limited. Owing to their proximity to each other the entire group of mines will be worked from the present Mammoth shaft, which is already down to the 500-foot level. The cyanide process will be largely utilized in the treatment of the ores, tests having shown that they readily yield to such treatment. With economical facilities for handling the ores and a plant modeled on modern methods, such as the company now intends erecting, joined with the fact that large bodies of ores are already developed, both in the Mammoth and the Collins, it is reasonable to believe that the Mammoth-Collins mines will become among the largest gold producers in Arizona.

The Greatest Monarch
Is a fit subject for pity if he is troubled with dyspepsia, while his poorest subject who digests properly may well be envied by a prince thus afflicted. The dyspeptic of every clime and nation owe a debt of gratitude to Hostetter's Stomach Bitters, which rescues them from one of the most obstinate and troublesome complaints against which medical skill is directed. On this continent, in Europe and the tropics, this sterling remedy is pre-eminent and justly popular, not only as a stomachic but also as a means of preventing and curing malarial, rheumatic, kidney, bilious and nervous disorders. It improves appetite and sleep, hastens convalescence and the acquisition of vigor after exhausting maladies, and counteracts the infirmities of age. A wine glass full taken before retiring has a tendency to promote tranquil, health yielding sleep, a boon much coveted by nervous invalids.
