Newton's Light Theory.

Sir Isaac Newton earned worldwide fame by showing that gravitation, previously recognized only at the surface of the earth, is operative throughout the universe wherever there is matter. In another field of physics he was far less happy. His brilliant success in experimental optics came to a qualified, though not invalidated, by a faulty interpretation of the facts. He gave his name and powerful authority to the corpuscular theory of light. In Sir Isaac's view, the phenomenon of luminosity is produced by corpuscles—exceedingly minute particles of matter—which are projected continuously from the sun, stars and all other luminous bodies. But his corpuscles failed to elucidate all the appearances, and Sir Isaac's theory was finally deposed by an explanation which referred light to undulatory vibrations in the ether. It would be some comfort for the discoverer of universal gravitation, were he living now, to realize that the modern physicist is daily dealing with corpuscles flung off from matter at speeds fairly comparable with that of life itself.

Couldn't Help It.

A young lady tells the following story of an Englishman she met during a trip to Mexico: The Englishman became acquainted with the American party while they were all guests at a winter hotel. Whenever the parents of the American girl proposed any trip the Englishman immediately begged to be made one of the party. He was to be included in a moonlight trip to a nearby mountain. After the Americans were ready to start they had to delay some fifteen minutes awaiting their guest's arrival. When he did arrive he electrified them by his comments on the reason for his delay. What he said was: "I beg pardon for my beastly tardiness. Couldn't help it, don't know how to bring my mother from the mercies first. It's a singular kind of bore, but one has to be kind to his mother, don't know!"—Milwaukee Free Press.

The Queer Screw Plant.

There is nothing under the sun quite so quaint, so weird and witchlike as the pandanus prairies of Fiji. The pandanus, or screw plant, as it is called, is a most grotesque specimen of the vegetable kingdom even at the best and in the early stages of its growth. In its very young days it is of an extraordinarily scrawlike shape and looks as though some unkind hand had taken hold of its long, swordlike leaves and twisted them round and round. Later on it straightens out a bit, and from it grow a number of tall wooden stilts. Its foliage is simple, a number of drooping, rugged tufts, for all the world like moss and very mournful looking. Among these moss hang the fruit, in shape like a pineapple, made up of hard red and yellow kernels, woody and fibrous and quite unpalatable from a European's point of view.

His Status.

The caste system is so deeply rooted among the people of India that Christianized Hindus are still under its potent influence. For example, Mr. J. C. Oman, formerly professor of natural science in the government college at Lahore, tells in his book, "The Brahmins, Delists and Muslims of India," of the native Christian head master of a mission school who was asked in a court of justice what his religion was. "Brahman-Christian," he replied. The judge, who was a European, not recognizing such a sect, asked for more information. "I am a Brahman-Christian," reiterated the head master. "I cannot call myself simply a Christian," he continued with some warmth, "when that Chooran (sweeper) there is also a Christian. I am a Brahman-Christian, sir."

A Woman's Era.

"If I were a man!" is surely a very unnecessary cry these days. The epoch of the man is past. The twentieth century is the era of the woman. There is with a few very slight exceptions nothing that a woman as a woman cannot do, and do every bit as well as if she were a man.—London P. T. O.

FOR SALE
