BOIL SUGAR HARDER

Warning to Vermont Farmers by State Commissioner of Agriculture.

While an increasingly large part of Vermont maple products is marketed as syrup and caked sugar, more than one-half the crop is probably still marketed as tub sugar. When such sugar is cooked at a lower temperature than 240 degrees F, syrup will separate from the sugar and fermentation will take place in warm weather. While there may be a limited market for a small quantity of soft sugar early in the season for immediate consumption, yet the greater bulk of Vermont maple sugar should be cooked hard enough to stand transportation to long distances and to keep without shrinkage for a long time.

This is particularly vital at this time, because after May 1, 1916, the duty will be removed from Canadian sugar and Vermont sugar makers must compete with Canadian sugar on a duty free basis.

Makers of tub sugar this spring should boil the sugar until the thermometer registers 240 degrees.

E. S. BRIGHAM,
Commissioner of Agriculture.

Duffy's Pure Malt Whiskey

A Medicine for all Mankind

Dealers in Vermont sugar agree that because our sugar makers are not cooking their sugar hard enough we are losing the trade of many eastern and western consumers who are coming to prefer Canadian sugar even at a higher price, because it is always made uniformly hard and there is consequently no loss from shrinkage.

Vermont sugar should always command the highest price, because it is second to none in quality. Our farmers should be careful to make the new crop of sugar particularly hard and thereby help to get back the business that has been lost.

This is particularly vital at this time, because after May 1, 1916, the duty will be removed from Canadian sugar and Vermont sugar makers must compete with Canadian sugar on a duty free basis.

Makers of tub sugar this spring should boil the sugar until the thermometer registers 240 degrees.

How much per—DELIVERED Mile?

THAT'S the Tire Question in a Nutshell!

Not—"how much does the Tire Cost?"—how much Rubber is in it?—how many layers of Cotton fabric?—or "how many different Vulcanizings does it go through?"

Because,—Results have shown that some of the Tires which have most Cotton, Rubber, Weight and stiffness, give much less MILEAGE and Resilience than other tires made lighter by more expert workmen, through more direct and precise Methods.

Nor is so-called "Mileage Guarantee" worth considering in purchasing of Tires.

Because—no Tires are actually guaranteed to give definite Mileage, no matter what the surface reading may suggest.

Such "Guarantee" would be impracticable with the best Tire ever made, or that ever will be made.

—This, unless the Tire User could, in turn, guarantee the kind of roads over which he would always drive, the kind of driving his Chauffeur would always do, and the air pressure he would always carry on each Tire.

THE "Mileage Guarantee" is therefore a deceptive Misnomer.

It does not guarantee given Mileage but is only a figure arbitrarily named "as a Basis for Adjustment" on Claims made for defective Workmanship or Materials.

Read any of these "Guarantees" that are printed (or have the verbal ones defined) and you will see that they don't guarantee anything except that the Maker alone shall decide everything such "Guarantee" is supposed to cover.

The larger the Mileage "Guarantee" the higher the price the Maker must charge, to cover (as with Life Insurance) the increased "risk" of replacing Tires that are reasonably sure to wear out in considerable numbers, before they have given the "Guaranteed" Mileage.

The Careful Driver, over good roads and streets, would thus pay more than the Tire is worth, so that the Reckless Driver, or he who must continually drive over bad roads and streets, might get Mileage he is not entitled to, at the Careful Driver's expense.

THE Goodrich Safety Tread is the fairest-priced Tire, of similar Quality, in the field.—Ten to 30% lower than other Tires that give less Mileage on average performance less effective Traction, with more Vibration, and greater tendency to separate the layers of Fabric and of Tread.

Compare the "Goodrich Safety" Mileage Costs with that of any other Tire in the field, and ACT on what the Comparison shows you.

Note the following table of comparative prices on non-skid tires. Columns headed "A," "B," "C" and "D" represent four highly-advertised tires:

Size	Goodrich Safety Tread	OTHER MAKES			
		"A"	"B"	"C"	"D"
30x3	\$ 9.45	\$10.55	\$10.95	\$16.25	\$18.10
30x3 1/2	12.20	13.35	14.20	21.70	23.60
32x3 1/2	14.00	15.40	16.30	22.85	25.30
34x4	20.35	22.30	23.80	31.15	33.55
36x4 1/2	28.70	32.15	33.60	41.85	41.40
37x5	33.90	39.80	41.80	49.85	52.05

If you are charged less for any other make than Goodrich, if they are taking it out of the tire, if you are charged more, they are taking it out of you.
