

HADLEY IS ENTHUSED

CONTROL OF WATER FORCE IN OZARKS RECOMMENDED AS RESULT OF GOVERNOR'S TOUR.

TRIP ENDED AT DONIPHAN

Executive Says State Should Attempt to Regulate Timber Cutting in Order That Supply May Be Conserved.

Governor Hadley is deeply impressed with the possibilities in the undeveloped section of southeast Missouri, which he visited with members of the immigration committee, and believes the time is not far distant when much of it will be settled.

Gov. Hadley says the state should attempt to regulate the cutting of timber in that section in order that the supply may be conserved. At present, much timber is being cut by lumber companies and individuals, and little attention is paid to conserving the supply for the future. The state, he says, probably has the right to prescribe proper methods of cutting so the supply, still abundant, may not be depleted. A state forestry commission with sufficient authority conferred by legislative enactment might prevent, he says, a wholesale waste of timber.

Interest was manifested in the trip, and every spot touched, whether it was a progressive county seat, a clearing in the woods or along the banks of the Current river.

Gov. Hadley, Chief Immigration Commissioner John H. Curran, M. L. Holman, consulting engineer of the Missouri waterways commission, and Doctor William P. Cutler, state pure food commissioner, were the lecturers of the party.

Interest Is Great.

Immigration Commissioner Curran is enthusiastic over the interest shown in the exploitation and educational journey, as he calls it. He foresees a great influx to the Ozarks in the next few years.

Current river, one of the swiftest in the Ozarks, offers abundant opportunities to small manufacturers to get natural motive power at minimum cost, according to M. L. Holman, of St. Louis, consulting engineer of the Missouri waterways commission.

Mr. Holman cruised down the treacherous mountain stream with Gov. Hadley and other state and railroad officials.

Current river is not now and probably never will be, navigable for power vessels of even light draught, but its crystal-like water of undoubted purity would, Mr. Holman says, be worth millions to New England woolen and paper mills or to agriculturists of Colorado.

The picturesque stream is now at its lowest ebb. The velocity of the current varies, averaging in smooth water from two to three miles an hour, and over shoals and rapids from eight to ten miles an hour.

Even at its present stage there is no inconsiderable volume of water in Current river. Springs are numerous and one of several inspected produces, according to Mr. Holman's estimate, a probable maximum of ten million gallons a day.

The exploring party took to the woods after being formally welcomed and banqueted at Salem, Dent county.

Camp pitched at Akera. The first camp of the party was pitched at Akera. Tents were thrown up to house the occupants of the fleet of ten floatboats. Gov. Hadley was given a separate tent, and had as his guests Vice-President Gray, of the Frisco; Pardon Attorney Frank Blake, Rush C. Lake, Commissioner Wightman, Engineer Holman, Walter S. Dickey, of the state waterways commission, and W. C. Pierce, of Maryville.

Judge Cox the Host.

Judge James Cox, a resident of the Ozark hills for twenty-nine years, was Gov. Hadley's host at Round Springs, while the executive awaited the arrival of the rest of the party. The governor's account of the two meals consumed by him at the Cox home caused the mouths of the other explorers to water.

J. B. White, president of the Salem, Winona & Southern railway, was at the head of the party that came out to Round Springs, to which a logging branch of the line extends. Mr. White also is president of the Missouri Lumber and Mining company, the office of which, at Grandin, Shannon county, has paid out in wages during the last fourteen years \$6,100,000.

Before the departure of the Hadley party for Winona over Mr. White's railroad a goat was sacrificed in honor of the first visit of a governor of Missouri to Shannon county. John Stephens killed the goat, furnished by Mr. Hahn. Gov. Hadley went into the

woods so as not to witness the slaying of the goat. The animal was barbecued by the natives and served on the river bank.

On the way to Winona a stop was made at West Eminence, where Gov. Hadley and Immigration Commissioner Curran addressed a crowd of 200 from the rear platform of Mr. Gray's car.

Holman Submits Plan. M. L. Holman, consulting engineer of the Missouri waterways commission, will recommend immediate consideration by the commission of the control of the water power of Current river for commercial purposes.

Superficial observations have convinced Mr. Holman that Current river is capable of supplying drinking water and a natural motive power for a population of 500,000.

"In no place with which I am familiar is there a greater water supply than in the Ozarks," he said. "I make this statement advisedly, knowing as I do the water conditions in the United States, Mexico, Canada and parts of Europe.

"New York is now spending \$40,000,000 in improving its waterways so as to provide an adequate supply for the metropolis. The waterways of New York in no way compare with those of Missouri.

"The entire problem of controlling water power is storage or reservoirs. The Ozarks have all of the water power necessary, but no reservoirs, which are essential to equalize the flow."

Mr. Holman, formerly water commissioner of St. Louis, and a recognized waterways expert, believes Current river is worthy of experiments.

Students Must Do the Work.

The law passed by the last legislature, creating the state waterways commission, appropriated only \$5,000 to carry on investigation. Mr. Holman says this sum is ridiculously small, and that it will be impossible to make any great progress unless the engineering students of the State University are used to assist in the work.

Mr. Holman's plan to assign engineering students to practical work in the Ozarks under the tutelage of competent instructors meets with the approval of Gov. Hadley, and classes probably will be started to the hills after Mr. Holman has made another and more careful observation.

Current river starts at Montauk Springs, eight miles south of Cedar Grove, passes through Shannon, Carter and Ripley counties, and empties into Black river, in Arkansas, sixteen miles from the Missouri line.

Gov. Hadley, Mr. Holman and others floated down the stream last week from a point near Cedar Grove to Round Springs, a distance of thirty-five miles, and also chugged in gas-engine launches from Van Buren to Doniphon, about fifty-five miles.

The lower part of the river was found more serviceable than the upper part. Only floatboats ply the stream through Shannon county, while through Carter and Ripley counties launches are operated with perfect safety.

Ruddy complexions and a multitude of ideas were brought back by the explorers, who reached Doniphon in time for breakfast Thursday morning. Gov. Hadley continued on to Jefferson City. He plans another exploration trip down the St. Francis river in December.

Although several of the party carried rifles and fishing apparatus, all admitted their game pouches were empty. Not even a nibble was recorded on the cruise. The discovery of a fish famine in the Ozarks will result in orders being issued to the fish commission to stock Current river with rainbow trout, bass and jacksalmon.

Ozark Country Has Future.

Chief Immigration Commissioner John H. Curran, Doctor W. P. Cutler, pure food commissioner, and Samuel Hughes, immigrant agent of the Frisco System, all were enthusiastic over the future of the Ozark country, as were Gov. Hadley and Vice-President C. R. Gray, of the Frisco, who accompanied the party through the wildest sections.

"The trip was a revelation," said the Governor. "We found that the Ozarks are not only a wonderful playground, equal in scenic beauty to anything in Colorado or Yellowstone Park, but a place where homeseekers may go, assured of health and prosperity.

"I don't see how a man can fail to make a living for himself and family in the Ozarks. The soil requires only careful attention to insure a diversified crop, and, as for grazing, one acre of Ozark grass is equal to three or four of the grass we hear so much about in Kansas and New Mexico.

"No section in the Mississippi Valley is so sparsely settled as the Ozark region, yet it is comparatively easy there to make a living. Lack of intelligent or scientific methods may have caused some failures, and one result of this trip will be some instruction in modern methods of farming under the

supervision of the agricultural department of the State University."

The interest shown by the people of the Ozarks in the investigation encouraged every member of the party. Crowds gathered to hear the addresses of the governor and of the immigration, dairy and agricultural experts, both in the towns and out in the hills. Schools were dismissed and children gathered on the river banks to cheer the explorers, and business was suspended whenever the party reached a town.

Will Stop Emigration.

"I am gratified with both the immediate and prospective results of the trip," said Commissioner Curran. "The first and most important effect has been to awaken an enthusiastic local sentiment among the people of the Ozarks in favor of adopting industries more suitable and more profitable for the region, thus raising the estimation of the people themselves so that they will not only discontinue leaving the country, but will welcome immigrants.

"We met with hearty sympathy from business men and farmers everywhere, indicating an appreciation of the objects of the trip. I was able to list three-quarters of a million acres of land which is for sale in tracts of from 2,000 to 125,000 acres, now available at from \$2.50 to \$5 per acre and all suitable for dairy, fruit growing, truck gardening, tobacco raising and other profitable industries.

"This is the first of a series of trips proposed. The next will probably be taken into the drainage section of southeast Missouri. This drainage area has the advantage over the Ozarks in that the land will raise anything on earth. The soil is deep and consequently will produce a much larger per cent of gain in a shorter length of time.

"The commission feels that it owes much to the press of the state for the publicity given the work and to the business men along the route for their hospitality, enthusiasm for industrial progress and loyalty to Missouri.

"While the whole party of thirty did not catch a single fish nor kill even so much as a sandpiper, these disappointments were more than compensated for by the satisfaction that for the first time in its history the Ozark region was in the spot light and showed to splendid advantage."

Party Is Royally Banqueted.

Each settlement seemed to vie with the other to display the products of the farm and dairy. The women, too, engaged in a spirited rivalry in placing before the travelers the choicest edibles.

Mrs. Tennessee F. Austin and Mrs. Lydia Olds, of Van Buren, Carter county, received the unanimous endorsement of the exploring party as the best cake bakers encountered on the trip. Van Buren housewives also were lauded as experts in trying chickens. The feast served by them on the courthouse lawn Saturday noon was of the sort to tempt.

The goat barbecue at Round Springs, the basket picnic at Welch Springs, the banquet at Salem and dinners at Winona and Doniphon were other feasts that tickled the palates of the official boosters.

The school children of Doniphon played an important part in the reception at Ripley county's thriving county seat Saturday night. Nearly 500 of them formed a line through which the visitors passed. Each child aided in holding long streamers of bunting and tossed golden-rod at the feet of the guests.

London Street Railways.

The minimum fare is 1 cent. The Council's cars carry about 412,000,000 passengers a year, and of this number 24 per cent travel at the 1-cent fare. The maximum length of the 1-cent fare is one-fourth miles; the average 1-cent stage, however, is 1022 yards. The longest distance from Central London to a suburban terminus is 9 1/2 miles.

Transfer tickets from 2 cents up to 8 cents are in use in several cases on the Council's system. These tickets are a convenience to the public, while at the same time they save the council from running certain through services which would probably not be remunerative. Transfer tickets are issued only on routes where no through service is in operation and at certain specified points.

The Council has to pay tax rates to the amount of about \$2433 a mile of track, besides income tax charges on the profits. The Council is required to maintain the paving 18 inches outside the outer rail and the whole of the area between the rails.

Good to Her Husband.

"George, dear," said Mrs. Dovelkins, who had come downstairs in time to pour the coffee, "I'm going to walk to the car with you this morning. Aren't you glad?"

"Very glad, indeed, lovely. It's so nice of you to think of me and to get up early for the purpose of making it unnecessary to walk those dismal three blocks alone. How much do you want?"

derground conditions are sharply separated from the light dwellers. Their skin is whitish or transparent. The eye atrophies or disappears altogether. The optic nerve and the optic lobe disappear, leaving the brain profoundly modified. Other organs develop in proportion. Those of hearing, smell, touch become large. Sensitive hairs, long and coarse, appear all over the body. These changes are produced gradually. In animals kept in darkness it has been possible to see the regression of the eye and the hypertrophy of the other sense organs.

live in all the world.—Manufacturers' Record.

Optimism at High Places. The one exception that we can recall to the steady domination of optimism in the high places of our nation for many years past was furnished by Grover Cleveland; and none of his triumphs was more remarkable than the extraordinary hold he maintained for nearly a year on popular sentiment, in spite of his frequent striking of a non-optimistic note.—New York Evening Post.

Recipe for Keeping Young. Dr. James B. Angell, retiring president of the University of Michigan, gives this recipe for keeping young: "The lesson I have learned in my 53 years' service is that lifelong association with college students secures one the blessing of remaining optimistic and youthful in spirit." It is evident that this grand old educator is quick to forget and forgive the many annoyances his youthful satchels have caused him to suffer—and no doubt he means every word he utters.—Cleveland Plain Dealer.

Try This in November.

Thousands upon thousands of families who have not been regular eaters of Quaker Oats will begin on the first of November and eat Quaker Oats once or twice every day for thirty days of this month; the result in good health and more strength and vigor will mean that every other month in the year will find them doing the same thing.

Try it! Serve Quaker Oats plentifully and frequently for the thirty days of November and leave off a corresponding amount of meat and greasy foods. You'll get more health, more vigor and strength than you ever got in thirty days of any other kind of eating.

While you are trying this see that the children get a full share. Quaker Oats is packed in regular size packages and large size family packages.

A RENDEZVOUS IN 1911.

"Here I've been sitting for two hours, and there's no sign of him."

CURED ITCHING HUMOR.

Big, Painful Swellings Broke and Did Not Heal—Suffered 3 Years.

Tortures Yield to Cuticura.

"Little black swellings were scattered over my face and neck and they would itch so I couldn't keep from scratching them. Larger swellings would appear and my clothes would stick to the sores. I went to a doctor, but the trouble only got worse. By this time it was all over my arms and the upper part of my body in swellings as large as a dollar. It was so painful that I could not bear to lie on my back. The second doctor stopped the swellings, but when they broke the pieces would not heal. I bought a set of the Cuticura Remedies and in less than a week some of the places were nearly well. I continued until I had used three sets, and now I am sound and well. The disease lasted three years. O. L. Wilson, Puryear, Tenn., Feb. 8, 1908."

Footes Drug & Chem. Corp., Sole Props., Boston.

United States Leads in Good Work.

In Germany there are 99 public sanatoria for adult consumptives with 10,539 beds, besides 36 private sanatoria with 2,175 beds. In 18 sanatoria for children with tuberculosis there are 327 beds, a total of less than 13,000 beds. The United States has provided over 300 sanatoria with 15,000 beds, showing that this country is in the lead in the anti-tuberculosis war. France has only 12 sanatoria for adult consumptives, with a total capacity of 148 beds. All of these institutions are private except the sanatorium at Agincourt.

Never Opened His Mouth.

"Not infrequent rays of unconscious humor illumine the otherwise impossible stories that come to my desk from amateurs," says a reader for one of the magazines. Recently I chanced upon this choice bit:

"John, the husband, and Grace, the wife, ate on together in silence. There was indubitably an ill feeling between them. The husband devoured a plate of soup, half a fish, an entree, two, a piece of roast beef, together with a sweet, without ever once opening his mouth."

Grading Literary Power.

Dean Shaller Mathews says that the newspaper "shapes the popular mind more by its headlines than by its editorials." By the same token, authors impress by the title of their books, not by their contents, artists by their themes, rather than by their execution—and lecturers by their platitudes more than by their sense.

Ladies Can Wear Shoes

One size smaller after using Allen's Foot-Ease, the antiseptic powder. It makes tight or new shoes easy. Cures swelling, hot, sweating, itching, feet, ingrowing nails. Always use it to break in new shoes. At all drug stores. See Don't accept any substitute. Trial package FREE by mail. Address Allen S. Olmsted, LeRoy, N. Y.

\$100000

SOLID GOLD & SILVER AWARD

For the Best Ear of Corn

To be Known as the *N.K. Kellogg* National Corn Trophy To be Awarded at the National Corn Exposition, Omaha, December 6 to 18, 1909.

Over one hundred thousand million (100,000,000,000) ears of corn were grown in the United States last year. Over a billion dollars were paid for them. More than a million and a quarter extra dollars went into the pockets of the farmers for corn this year than they received for the previous year's crop.

The reason for this may be found in the fact that the people of the United States are beginning to learn how delicious corn is and to realize its full food value.

Kellogg's Toasted Corn Flakes has placed corn among the indispensable items of daily fare.

The makers, therefore, are interested in the development of the King of Corns, and have decided to award a beautiful trophy for the man, woman or child who can produce the best ear of corn in two different seasons.

Professor Holden, of the Iowa State College, the greatest authority on corn in the world, will award the prize at the National Corn Exposition, to be held at Omaha, Neb., December 6th to 18th, 1909. Two single prizes will govern the plan, and they are—that you send your best ear of corn to the National Corn Exposition, Omaha, Neb., before November 27, 1909 and that you are a member of the National Corn Association. Full particulars regarding which can be had by writing to National Corn Exposition, Omaha, Neb. It is a safe security to your specimen and word it. For the Kellogg Trophy Contest, and write your name and address plainly, if yours is judged the best, you will get the trophy for 1910. If you succeed again next year or the year following, the trophy will become your property for all time. In other words, you must produce the best ear of corn two different years.

There will be no restrictions. Any man, woman or child belonging to the Association can enter. It will be open to every state in the Union. Professor Holden will judge the corn particularly on the basis of quality. The growing of more corn per acre is one object of the award, but the main purpose of the founder of the trophy is for

Increasing the Quality of Corn Used in Making Kellogg's TOASTED CORN FLAKES

Many people think we have reached the point of perfection in Toasted Corn Flakes as it is today. If you haven't tried it, begin your education in "good things to eat" today. All grocers have it.

Mr. R. H. Walker, Secretary Texas State Pharmaceutical Association, Galveston, Texas.
Dear Sir: Herewith I beg to hand you certificate of analysis of the Oxidine you submitted a few days since. I trust this will be duly received and found entirely satisfactory. I have kept you waiting for a little while, but I appreciate the responsibility which you have seen fit to place upon me; for that reason I have taken my time to be certain and accurate about my results.

If I can serve you in the future please advise me. Thanking you, I beg to remain,
Yours very truly,
P. S. TILSON, Chemist.

Under Life in Caves.

The under life of the caves has a world of its own. Animals are born in subterranean caves, followed out by streams, develop, reproduce, and die, while forever deprived of the sunlight. There is no cave mammal except a rat, nor is there a cave bird. There are no animals that require much nourishment.

Grottoes with underground rivers have the most life. Usually, the subterranean life resembles the general

types of the country. It has entered the cave and become acclimated there, undergoing divers adaptive modifications. So we generally find, in modified forms, the life of our time. But in some caverns there seem to be the remains of an ancient animal life that has everywhere else disappeared from terrestrial rivers and lives only in certain caverns.

The certain creatures of modern species that have adapted themselves to un-

live in all the world.—Manufacturers' Record.
