Great Work for Richmond.

To the Editor of the Dispatch:

Continuing the subject of the above communication in your paper of the 21st June we propose to give some additional reasons in support of the improvement of our harbor, a work of substantial merit, and calculated to attract the attention of the citizens that are concerned at all times about matters of public interest of Richmond.

Much of the progress of our city in commercial welfare and manufacturing industry depends upon the judicious direction of her public interests by our City Council. Let such of them as would familiarize themselves with the topography of her investments, and survey the panorama of works of nature and art that constitute her riches and are the harbingers of her future greatness. There let them view her hills, valleys, highways, falls, bridges, waterfalls, foundries, stacks, furnaces, mills, warehouses, wharves, and docks, and ponder the scene. Let them contemplate what measures would assist her commerce—what methods are indicated that would give greatest majesty and power to her enterprises—what make her the object of national admiration that she should be. This enlightened by the contemplation of works for public good, they would enter upon a harvest of enterprise, the evidences of success of which would cluster into view like sunlight dispelling the mists of morning. Soon our Council would distinguish itself in fostering enterprises that would bring material and political power and prosperity to our people's prosperity and happiness. And these we have a right to expect of them, as, indeed, it should be their aim and pleasure to achieve.

But we must also turn our eyes to Congress, that would not be an indifferent onlooker of our progress. Let us urge upon them a bill for the improvement of our harbor, a work of substantial merit, and calculated to attract the attention of the citizens that are concerned at all times about matters of public interest of Richmond.
