

Official Returns.

The board of supervisors met last Friday and counted the votes of the different precincts cast at the election of last week Tuesday, the count not being completed until Monday evening on account of the failure to receive the full returns until that time. Below we give the total vote received by each candidate for state and county offices. In the county 609 ballots were cast, divided among the parties as follows: 50 socialist, 90 republican and about 469 democratic:

Some Features of Arizona Fair.

One of the features of the Phenix Fair will be a Roman chariot race between E. J. Levengood of Pasadena and Pomona, and Dr. E. J. Sinard of Pueblo, Colorado. Negotiations between the Fair commission, Dr. Sinard and Levengood, which have been going forward for some time, has been closed. Sinard and Levengood are experts. Each has a Roman chariot and a team of six blooded horses. The rivalry between them is keen, and they will put up a real race for the 1000\$ offered by the commission. It is expected that the race will be in three heats, to be run on different days of the fair.

Chariot races are always popular features of state fairs. Levengood has been a winner several times at the Pasadena tournament of roses. He and Dr. Sinard have appeared at numerous fairs throughout the west.

The Fair commission has closed a contract with Dorothy DeNonda, who claims to be the only woman balloonist who makes a parachute drop. She ascends 2000 feet and makes the drop from that height. She has engaged to make an ascension and drop each afternoon during the fair.

COPPER
The New Edition of the
COPPER HANDBOOK

just published, is Volume X, for the years 1910-1911, and required nearly eighteen months in preparation.

IT HAS 1902 PAGES
containing nearly one and a half million words, or about twice as much matter as the Bible. There are 25 chapters, and the book covers the

COPPER INDUSTRY OF THE WORLD

The book covers Copper History, Geology, Geography, Chemistry, Mineralogy, Mining, Milling, Leaching, Smelting, Refining, Brands, Grades, Impurities, Alloys, Uses, Substitutes, Terminology, Deposits by Districts, States, Countries and Continents; Mines in Detail, Statistics of Production, Consumption, Imports, Exports, Finance, Dividends, etc.

8,130 MINES AND COMPANIES

these descriptions ranging from 2 to 2 lines, in the case of a dead company, in which case reference is made to a preceding edition giving a fuller description, up to 21 pages, in the case of the Anaconda, which produces one-eighth of the copper supply of the world. The chapter giving mine descriptions, which lists the largest number of mines and companies ever given in any work of reference on mines or mining investments, has been

FULLY REVISED.

The new edition of the Copper Handbook is a dozen books in one, covering all phases of the copper industry of the entire world. It is used as the

WORLD'S STANDARD REFERENCE BOOK ON COPPER

by the managers of the mines that make ninety per cent of the world's output of copper, and is used in every civilized country of the globe. It is filled with FACTS of vital importance to

469 TEMPLE BUILDING, HOUGHTON, MICH., U. S. A.

Summit Mine has Been Closed Down.

The Summit Copper Company, operating under lease and bond, the old Gibson mine 16 miles west of Globe, has discontinued work for the present. Three men will remain to keep the mine free of water.

There is some 20 per cent copper ore in the bins and this is being shipped.

A notice was posted to the effect that the shut-down was thought to be temporary and that it is hoped to resume operations shortly with a larger force of men than has been employed for some months. The men are allowed to remain at the camp rent free, pending resumption of work.

The Gibson mine was opened in 1906 by Sam Gibson and Tip Henderson, who started with a capital of a million and ninety dollars, consisting of 90\$ cash and a million dollars worth of the hope that springs eternal in the breast of every prospector.

The Gibson Copper Company was organized and the mine was worked until 1910, paying its own way and returning a handsome profit to the owners.

The gross smelter returns for that period are reported to be nearly 1,250,000\$ on a gross output of about 6,500,000 pounds of copper.

The ore was hauled by ten-horse teams to the Old Dominion smelter at Globe, a distance of 18 miles and owing to the high transportation and smelting charges, only ore assaying 20 per cent copper or better was mined and shipped, thousands of tons of milling ore being left in the stopes.

The two principal veins, the Summit and the Pasquale, are mineralized zones of crushing and shearing in the Pinal schist parallel to its bedding planes. They strike about N. 20 de-

grees E. and have a dip to the north-west varying from 20 to 70 degrees.

The ore occurs as lenses of nearly pure chalcopyrite from an inch to three feet wide associated with more or less low grade material consisting of crushed and broken schist and secondary quartz and irregularly disseminated chalcopyrite. Very little oxidation has taken place, chalcopyrite being found in some places only a few feet from the surface. Black specular hematite is of frequent occurrence.

The Gibson company opened the Summit vein with three tunnels of total length of 2700 feet and two inclined shafts, from one of which 6000 feet of drifting was done on six levels.

The Pasquale vein was opened by two shallow inclined shafts, a 1000-foot tunnel and crosscut on the third level from the shaft on the Summit vein. Over 2000 feet of drifting was done on the third level.

A three-compartment vertical shaft was sunk to a depth of 243 feet in the hanging wall of the Pasquale vein for the development of that vein at greater depth.

The Summit Copper Co. took over the property in June, 1910, and began the development and exploration of the Pasquale vein. They sank the vertical shaft to a depth of 576 feet, cross-cut to the Pasquale vein on the fourth level and drifted about 800 feet north and south, disclosing several lenses of high grade ore and milling ore of lower grade.

A cross-cut was driven to the vein on the sixth level and 30 feet of drifting was done, the vein looking better and stronger than when first cut on the fourth level. A vertical raise was driven to the vein from this cross-cut, to the elevation of the fifth level and a 20 foot cross-cut from the top of this raise showed the vein to be of

about the same character as on the sixth level.

A short cross-cut was also driven to the vein on the second level and about 500 feet of drifting done, disclosing two lenses of high grade ore, with its concomitant milling ore.

Exploratory raises were also driven from the third level, one of which disclosed considerable milling ore.

Raises were driven on the ore disclosed on the second and fourth levels and all that ran over 18 or 20 per cent copper was mined and shipped.

There is no reason to doubt that drifting on the fifth and sixth levels will disclose as much and as good ore as was opened up on the fourth level.

There are thousands of tons of low grade ore remaining in both veins as stope filling and unbroken ore.

While the Summit Copper Co. has as yet made no public statement, it seems probable that it is not in possession of sufficient funds for the development, extraction and treatment of the low grade ore necessary to profitable operation under existing internal conditions and the present price of copper. The tenor of the notice posted at the mine seems to indicate that a reorganization is being attempted.—Globe Silver Belt.

Stockholders' Annual Meeting.

The annual meeting of the Oro Plata Company will be held at the office of Gaddis & Perry Co., at Kingman, Arizona, on Tuesday, December 5th, 1911, at 7:30 p. m., for the purpose of electing directors for the ensuing year, and for the transaction of such other business as shall come before the meeting.

J. W. GERRITT,
President.
CHARLES METCALFE,
Secretary.
Kingman, October 26, 1911
First insertion Oct. 28—Dec. 2

ONE reason for giving this store the title above, is that it shows you very clearly just what kind of a store it is. There's no better way to make clear, in a very few words, that this store is a quality center, headquarters for good merchandise, than to call it the home of Hart Schaffner & Marx clothes. We're roady to show you now the latest new styles in these goods; the new fall stock is in; a fine display of best clothes. Come in and look.
