Hazletonians complain of high rate of fire insurance The Lehigh and Wilkes-Barre mines will work twenty days this month. The house of John Murray, in Warrior Run, was badly damaged by fire.

Barney Campbell, one of the oldes residents of Weatherly, has passed away. An eisteddfod will be held in the

Plains. Congregational church on Thanksgiving Day.
Professor C. E. Smith has been re-

elected principal of the Parsons schools for the third successive term. Several important improvements will

be made to the Welsh Congregational church in Edwardsville.

Simon Rittenhouse has been appointed postmaster at Mountain Grove and Nathan C. Sorber at West Nanticoke. A prize of \$5, for the best jubilee song by a colored quartette, will be one of the features of the elsteddfod in Parsons on Labor Day.

Rev. Dr. Josiah Strong, of New York, has established a branch of the Evangelical Alliance at Shenandoah, to help Americanize foreign residents. A young Polander living near the

his condition is critical,

James Donnelly, aged eighteen years, son of Lawrence Donnelly, of Plymouth, jumped from a moving car in his leg was broken and his arm so badly crushed that amputation may be necessar/

The trustees of the State Hospital, at Fountain Springs, have promoted Dr. George W. Reese to the post of first assistant surgeon and have elected Dr. William T. Davies, a son of ex-Lieutenant Governor Davies, second assistant, and Dr. Charles H. Swank, of Sunbury, as their assistant.

The water mains of Tamaqua borough being inadequate to supply the demand, the borough council has decided to held a special election on July 20 for the purpose of ascertaining whether the citizens favor an increase of indebtedness of \$50,000, the money to be used for the improvement of the water mains.

The counting of the vote in the special election in Beaver Meadow was completed Friday. The town was re-cently made a borough, and in the first local election under the new arrangement the Republicans carried everything, with the exception of one councilman. J. M. Stauffer was elected burgess; John Williams, tax collector; John August, constable, and John

ONE VICTIM MISSING.

Probable That Burning River Dredge Captain Was Drowned.

Pittston, June 13.-Maurice Reynolds. the only one of the three men who escaped from the burning dredge here Friday night, is still in a critical condi-

The fire was extinguished about 2 o'clock Saturday morning and then the rescuers searched the blackened wreck, but to their surprise found only one charred body-that of John Kyler. There was no trace of Captain Rey-

It is supposed that he managed to escape from the burning cabin, and in his frenzy jumped into the river and was drowned. The body has not yet been found, although a diligent search was made all day.

HELD FOR MURDER.

Thomas Potts in Schuylkill County Jan Awaiting Trial.

Pottsville, June 13.-Thomas Potts was sent to jail here last night for court, charged with the murder of John Liddell, who died at the Pottsville hospital from the effects of injuries alleged to have been inflicted by Potts.

Liddell, it is claimed by Potts' friends, followed the accused man about and abused him. Potts finally lost patience and struck his tormentor a heavy blow with his fist, who staggered and fell in the gutter, his head striking the curbstone with terrific force. He died from a fractured skull. Liddell was married and leaves a fam-

TWO BREAK JAIL.

Prisoners in Susquehanna County Saw Their Way to Liberty.

Montrose, June 13. -Two prisoners, Frank Griffin and George Wood, escaped from the county jail Priday. They sawed the floor of an unused cell, crawled into the cellar, then out of a coal hole, to the jall yard, where they found clothes lines, which they threw over the wall and gained liberty. The saw was stolen from carpenters who had been repairing the interior of the jail, which was burned a month ago. The men were recaptured yesterday. Wood was taken at Heart Lake and Griffin at Deposit, N. Y.

AFTERDAMP KILLS MINER.

He had gone into an abandoned portion of the mine and had ignited the gas with his naked lamp. He was not by the explosion, but was caught by the afterdamp and suffo-

AWARDED HEAVY DAMAGES.

David Zehner Gets \$18,000 from the

Lehigh Coal Company. Pottsville, June 13.-The arbitrators the plaster has fallen off in some places

in the damage suit of David Zehner against the Lehigh Coal company, last evening filed their award, giving the

plaintiff \$18,000. This was a suit to recover for damages by coal dirt in the little Schuylkill river, which, it is claimed, ruined the plaintiff's mill at Zehner station. The verdict is the largest ever rendered in such a case in Schuylkill coun-

FELL THREE STORIES.

Terrible Accident of a Bricklayer Working on a High Mill.

Bloomsburg, June 13 .- Amos Traveldece, a bricklayer, on Saturday fell from the third story of the flour mill now in course of construction here, and was unconscious when picked up. It is thought he cannot recover.

AVOCA.

The marriage of Miss B. O'Brien, of his place, to James Hartnett, of Scranton, will be solemnized with nuptial mass in St. Mary's church tomorrow morning at 7.30 o'clock.

The school board organized on Saturday evening. The following are the officers: President, D. D. Davis; secretary, A. J. O'Malley; treasurer, Solomon Deeble. The other members are Hon. J. J. Morahan, Edward Gibbons, Empire mine, Wilkes-Barre, tried to and Philip Clifford. A vote of thanks board a moving engine on the Central was tendered W. J. O'Malley and Jacob railroad but fell under the wheels. His Webster for the efficient services durboth legs were terribly crushed and ing the past few years. Both gentlemen responded in a few words of gratitude

The Sons of St. George met on Saturday evening and installed the folthe Lance mine, and was thrown lowing officers: Past president, Herbert against the rib with such force that Boase; president, Richard Pollard; vice president, William Bennett; recording secretary, Thomas Rodgers; financial secretary, Robert Bosley; messenger, John Langby; assistant messenger, William Alger: chaplain, James Boase: inside sentinel, John Boase; outside sentinel, Edwin Pierce; trustee, M. J. Bosley.

Thomas Burns was elected delegate to the grand lodge convention to be held at Shamokin in August. Walter Adgers performed the duties of installing officer.

Mr. and Mrs. Elmer Turner and famlly have removed to Pottsville.

Mr. and Mrs. James Deeble were disitors in Wilkes-Barre on Saturday. Mr. and Mrs. Robert Sandon spent

Sunday at the Dale residence in Scran-The following bill introduced by Hon-J. J. Morahan, of the Fifth legislative ditrict, in the house of representatives at Harrisburg several weeks ago was signed by the governor and is now a law: An act for the better protection of employes in and about the coal mines by preventing mine superintendents, mine foremen and assistants from receiving and soliciting any sums of money or other valuable consideration from men while in their employ, and providing a penalty for violation of

Secion 1. Be it enacted by the senate and house of representatives of the ommonwealth of Pennsylvania in general assembly met and it is hereby enacted by the authority of the same. hat on and after te passage of this act that any mine superintendent, mine foreman or assistant foreman, or any other person or persons who shall receive or solicit any sum of money or other valuable consideration from any or his or their employes for the purpose of procuring employment, shall be guilty of a misdemeanor, and upon convictim shall be subjected to a fine les than \$50 nor more than \$300. and undergo imprisonment of not less than six months, or both at the disretion of the court.

Section 2. All acts or parts of acts inconsistent herewith be and the same

are hereby repealed. On Saturday afternoon while the Lincoin base ball team was playing the Wyoming team on the latter's grounds, Newlin was run into by the short stop of the Wyoming team. Both boys fell heavily to the ground and when picked up it was found that Newlin had sustained a fracture of one of the bones of the leg. He was removed to the home of his mother, where Dr. Seamen set the limb.

At a recent meeting of the Daughters of St. George the following officers were installed by Grand District Deputy Mrs. Golightly; Past president, Mrs. Abegail Atwell, president, Mrs. E. Richens; vice-president, Mrs. Annie Mitchell; financial secretary, Mrs. Emily Bray; recording secretary, Mrs. Elsie Warren; chaplain, Mrs. Amelia Hooper; first conductor, Mrs. Maria Alger; second conductor, Mrs. Nellie Widdle; inside guard, Mrs. Martha Bradbury; outside guard, Mrs. M. J. Bosley. After the installation ceremony, refreshments were served.

An interesting game of ball was played on Saturday evening between the Moosic Populars and the Pittston business college team. Score, 13-16 in favor of the Populars. Miss Kate Gogan, of Scranton, is vis-

ting friends in town. A valuable cow owned by Thomas Maloney of the West Side was killed a few days ago on the Valley cut-off. The Marcy township schools closed

The St. Aloysius society attended mass in a body at St. Mary's church yesterday morning.

FOREST CITY.

The Susquehanna county Republican convention will be held at Montrose

omorrow A daughter was born to Mr. and Mrs. Jack Alexander Saturday morning. M. D. Evans, foreman at the Forest City slope of the Hillside Coal and Iron ompany will sail for Wales early in July. He expects to be absent about

two months. A regular meeting of Enterprise Hose company was held Friday evening. Two new members were admitted, Howard P. Johns and Ellsworth F. Ames. The fire rooms are now lighted

by electricity. A meeting of the Forest City school board was held Friday evening. Previous to the meeting the members had examined the school building, and as

GREAT WALL PAPER SALE.

We are going out of the Wall Paper business and our stock mus be closed out at once, as we want the room for other goods. Twenty-five Thousand Rolls to be closed out at the fol-

How the Human Body Is Illuminated Like a Chinese Lantern -- Sewing the Living Brain.

Writing from Washington to the Providence Journal Rene Bache says: The wonders talked about in the Medical congress, which has lately been in session here, would furnish material for a new volume of Arabian Nights, published as a scientific appendix. From what they said one might get a notion as to why the average duration of human life in civilized countries has been lengthened since the middle of this century by more than ten years. All sorts of feats of surgery, which were deemed impossible only a generation ago, are now performed without great danger to the patient, and the physician is able to explore with an electric light the inthe mind, prying amid the grey thought-substance for causes of mis-

chief. This, indeed, is one of the greatest of new surgical marvels. The exact situation of a tumor on the brain is located by observation of bodily symptoms, and then the skull is opened and the morbid growth is removed. It may be that the sufferer loses the hearing of one ear, and the physician looks for the cause in the auditory area of the cerebral cortex. Or an inflammation of the ear will bring about an abscess on the brain, through the introduction of disease germs bred in the pus, and the simple thing to do s to open the skull and empty the Of late the surgeons have been trying to cure epilepsy by trephining operations, to remove the pressure on the brain which, according to accepted theory nowadays, is the cause of that dreaded disease

SEWED UP THE HEART.

From time immemorial it has been considered that a wound of the heart -in a physical and not sentimental sense-was necessarily and immediately fatal. Nevertheless, only the other day Dr. Rehm, of Frankfort-on-the-Main, sewed up a man's heart, which ad been stabbed through with and the patient is alive and well now. Of course, this could not have been accomplished without the aid of those twenty years. Boiled instruments, germkilling solutions, and absolute cleanliness form the whole sum and substance of this new departure in medical treatment. All germ being killed, no blood poisoning or inflammation follows the operation, and the wound made by the surgeon's knife hears immediately. In old times it would have been out of the question to sew up a man's liver, which had been cut almost to pieces, as was done recently in Washington by Dr. James Kerr. That man is in first-rate health at present, by the way.

The illumination of the human body for the purpose of studying its inside works is one of the most interesting of latter-day achievements for therapeutic purposes. Some time ago a French scientist named Trouve made experiments with a view to contemplating the internal anatomy of living fishes. He would cause a fish in an aquarium to swallow a small electric light bulb, which was mistaken for a dainty, on the end of a wire. Thus, by illumination from within, every bone in the fish could be seen distinctly. This idea was taken up by an ingenious physician, who persuaded dyspeptic patients to swallow a similar apparatus. The result, in a dark room, was that the stomach was lighted up with sufficient clearness to enable the observer to see f anything serious was wrong with it. If there was an opacity, it signified disease. In this way the cancer was found in the stomach of the Comte de Paris. The doctors thought or removing the organ and substituting the stomach of lamb, but the operation was deemed

too hazardous. The tissues of the body become translucent to a considerable extent when placed between the eye and a brilliant light. Thus, by the aid of the bulb aforesaid, it was practicable not to see into the stomach exactly, but to find out if anything was wrong. This plan has been adopted in cases where persons have swallowed false teeth or other objects hopeless of digestion. In such an event the foreign body would make its presence palpable by a distinct opacity, as observed from the front outside. There is a contrivance, consiting of a sort of box, in which a man stands, with a very bright light behind him, the result being that his entire body is rendered translucent. Under such conditions the state of his inward parts can be ascertained with a good ical of accuracy, something abnormal being indicated by an opaque spot

where there 's no bone. ILLUMINATING THE BLADDER. Nothing is thought nowadays of examining the interior of the bladder with an electric light, actually looking nto it to find out if anything is amiss with that important organ. In like fashion the throat is inspected, the sperator throwing a searchlight into the windpipe and monkeying with the vocal cords as he pleases, seeing meanwhile just what he is doing. Thus he is enabled to remove from the cords any abnormal growth, such as might eccasion the greatest distress and even death if it were permitted to remain. The instruments used for this sort of purpose are necessarily of the utmost ielicacy, one of them, for cutting, be-

a long arm. But, to the layman, the most striking use of electricity in the illumination of the body, is for discovering if aught is wrong with the pharynx or other cavities behind the face. An electric bulb is introduced in such a manner as to illuminate the whole mask of the face, so to speak, the effect being more ghastly than that of

Physicians in ordinary practice consider dentists as inferiors professionally; yet it is a fact that dental science has progressed more than any other branch of surgery within the last quarter of a century, if that which pertains to the eye be excepted. False teeth are now made to such perfection that, while deceiving the eye to admiration, they are almost as good as real ones for chewing. But the most wonderful thing accomplished by the dental surgeon is the transplation of teeth. He can actually take a good fresh drawn tooth from the mouth of one person and plant it in the jaw of another, so that it will grow and be to all intents and purposes as good as if it had sprouted originally in its new situation. A satisfactory connect with the old nerve is established, the fortunate act being that nothing in the ody unites more readily than nerve

TRANSPLANTING BONES.

The transplantation of bones is an other triumph of the new surgery Where a human bone has become dis eased or otherwise damaged beyond re pair, it can be replaced under reasonably favorable conditions by a bone taken from an animal. Only the other day the leg bone of a child in New Up a Wounded Heart--Searching York city was made good in this way by a bone from the leg of a dog. Rough on the dog, one may say, but that point is not considered seriously in questions of human life and health. The nose is an organ liable to damage, and various diseases attack it and impair its beauty. Where the bridge of that or gan has fallen in, or has been de stroyed, it has been found practicable to put in an artificial bridge of chicken Sometimes gold or platinum is preferred as the material. The proper antiseptic methods being followed, the flesh heals over the new bridge with-

out irritation, and thus life is made worth living once more. The eye being one of the most impor tant organs of the body, it is lucky that medical science knows so much nest recesses of the body, looking for about it. In fact, knowledge of the whatever may be wrong. He does not eye comes extremely near to being an exact science. The conditions of civilized life do not seem to suit the eye and the consequence is that comparatively few people go through life with out some trouble with their sight Nearsightedness becomes more prevalent with every generation; it is a dis ease producing change of structure and an abnormal shape of the eye. Nobody knows just what the nature of the disease is, but optical compensation for the result is made by means of concave lenses. Astigmatism-to most people so mysterious a term-is merely an irregular shape of the cornea, which is set on the front of the eye like a watch glass. Most people have more or less of it. This likewise is corrected by proper glasses. A generation ago people with sore eyes were very common. Nowadays, thanks to the fact that most people who need them wear the proper glasses, such complaints are rarely observed.

SWAPPING EYES. Every now and then one reads in the newspapers about the transplantation of an eye from a rabbit or some other animal to the empty eyesocket of a human being. Invariably the result is stated to have been a great surgical triumph. As a matter of fact, how sight; it is all a fake and nonsense. over again, but always without success, because no animal's eye is just like man's in size, shape and structure. antiseptic methods which have fairly If a human being could be persuaded revolutionized surgery within the last to give up a healthy eye for the benefit of another individual, there might be a success and a renewal of vision, through a uniting of the old optic nerve with the new one. But it would be extremely problematical at the best. There is no future ahead in that direction. The development of modern knowledge respecting the eye is due primarily to the ophthalmoscope-a simple disc-shaped mirror with a hole through the centre, by means of which the physician is enabled to look into the organ and examine its interior. He can even get a glimpse of the grey matter of the brain by gazing through

the little canal through which the opic nerve enters the brain from the eye. Deformities nowadays are almost unnecessary, so many of them are curable with the aid of modern surgery. There is no reason why anybody should be cross-eyed; a simple operation cures When a person is very crosseyed, it means that he has the sight of only one eye. But the vision of the blind eye can be restored perfectly under ordinary circumstances, by the operation aforesaid. No excuse exists wherefor any one should have a club foot in these times, or a hand similarly disabled. It is nearly always practic able to remedy such a defect in childhood by surgical treatment, and there are plenty of charitable institutions to which even the poorest may apply for assistance of the kind. Doctors are apt to be glad enough to have the opportunity of practice. The humpback today is almost an anachronism, inasmuch as this dreadful affliction, due to inherited disease, is removable by suitable means. The sufferer from this trouble, or from lateral curvature of the spine, is wrapped in folds of crinoline saturated with moist plaster of paris, hanging by the hands from a bar meanwhile, and the jacket thus formed and renewed at intervals makes the back-

bone straight. AURAL ACHIEVEMENTS.

It is fortunate that the ear is not open to inspection like the eye, its internal arrangements being unapproachable visually. It is impossible ven to investigate the organ satisfactorily after death, for the reason that the parts collapse at once when the vital spark leaves the body. The drum in a living person bars the to observation, and even though it be plerced, the winding passages beyond cannot be seen through. On the further side of the drum are three little bones, the "mallet," "anvil," and "stirrup," which act on each other as levers. The vibrations of air which strike the drum are conveyed by these bones o a spiral shell-shaped chamber just behind and above the external opening of the ear. The shell is composed filaments of the auditory nerve and they convey the sound impressions directly to the brain. Beautiful artificial ears, flexible and costing \$100 each are made of vulcanized rubber, painted by hand. Missing ears are mostly lost in railway disasters and by accidents with machinery.

It has been ascertained recently that superfluous hair on the human body can be disposed of most effectually by exposing the part to the X rays. The process should only be attempted by an expert, inasmuch as careless us ing like a little guillotine on the end of the rays has done much injury. Hith-

erto the only successful method was to extirpate the individual hairs with an electric needle. Another recent discovery will do away with that awful affliction, goitre. This disease is enlargement of the thyroid gland in the neck. Injections of an extract obtained from the thyroid glands of sheep quickly reduce the gland to its normal proportions. Yet another dis-covery, only a few months old, is a means of diagnosing typhoid fever. It is learned that the germs of typhold will collect in little balls when introduced into some drops of the blood of a patient afflicted with this disease; it the disease is not present, they will not gather in this way. One of the most curious of the very new surgical appliances is a little metal box to which a couple of hearing tubes are attached. It is a species of telephone, and, by noticing the differences in the sounds that come through it, one may draw a map on the surface of the body of all the internal organs. This is important, as determining, any enlargement, shrinkage, or displacement.

THE MARKETS.

Wall Street Review.

New York, June 12.—Sugar asserted its leafership of the market quite emphatic-ally today and the tone of the market was almost wholly dependent upon devel-opment in it. The dealings in Sugar stock represented fully one-fifth of the total transactions. The coal stocks were quite notably strong in the early dealings. The total sales of stocks today were 110,751

SMYRNA RUG AND CARPET SALE

It is with a good deal of hesitancy that we've at last brought forward those Fine Smyrna Rugs and Carpets for the slaughter. We know that such expensive goods. in the face of the trade depression, that has hung over this valley, was no easy matter. We have been notified, however, to bring this sale to a close, and before it can be wound up these goods have got to be disposed of. WILL YOU BUY
