

THE *WORLD* *DO* *MOVE*

Yesterday

Ten years ago, the airplane was an experiment.
Twenty years ago, the wireless didn't function.
Thirty years ago, the automobile was declared impractical.

Today

We're trying to talk to Mars.
We're trying to shoot a rocket to the moon.
We're working on the problem of taking fuel from the air.

Tomorrow

Who can tell?
Perhaps we shall have harnessed the sunlight and the heat of the inner earth.
Maybe the folks on other, older planets will be telling us how to use lightning, how to control hurricanes and floods, how to live without sleep or food.

Every Day

The march of events is so fast that each hour brings forth new wonders in this every-day fairyland of ours. Each event in daily history, great and small, has an effect on the ultimate outcome.
There's only one certain method of keeping abreast of the world's chronology. Read a good newspaper. There are dozens of them. For the best resume of current history, interestingly set forth, we recommend

The Washington Times
THE NATIONAL DAILY
