

The Intelligencer.

Office: Nos. 25 and 27 Fourteenth Street.

Now we all know that Crook wasn't lost at all. It was the people who were too fully looking for him through the bottoms of Washington champagne glasses.

MEMOR COUNTY has been terribly scorched by smallpox, and it appears that the end is not yet. The ordinary death rate in small pox is about one in four. In Mercer nearly half the cases have resulted fatally.

The wonder is, not that a Star route juror has the delirium tremens but that the whole twelve are not raving maniacs. By the way how did the Court happen to know that two drinks a day would be about the correct thing?

WHORRY is looking for a premium cheque thought will find it in this, that the Ohio Democrats shall raise the cry that Forker means Foster. Forker is big enough to stand alone, and there is little pretense that the cry would be anything more than a campaign pleasantry, but if it would drive votes from Forker what more could be asked? Truthful Democrats wouldn't all fall, but there are always some people who will do the official lying for a consideration. At this time Forker is canting very gracefully.

It is not probable that in the contemplated consolidation of Revenue districts, State lines will be disregarded. The understanding is that there is to be at least one collector in each State. The Government seems to have determined to reduce the number from 126 to ninety-two or perhaps to a still smaller number, and this will be done as soon as the necessary arrangements can be made. The reduction ought to be to the lowest point compatible with the efficiency of the service; and this we take to be the desire of the administration.

The convention of Ohio Republicans went along smoothly and concluded its labors with the consciousness of having done good work and given satisfaction to the party. But this doesn't keep some agile idiot in Washington from discovering that the President is dissatisfied with the work of the convention. The resolutions endorsed the President and declared a Republican, progressive policy. The President has every reason to be in a comfortable state of mind, and that is the mind he is in.

GUTRAU prophesied a day of wrath for all who were instrumental in bringing him to the halter. A correspondent finds that Juror Sheehan has gone crazy; District Attorney Corbitt's wife and the wife of Juror Hobbs have died; Witness Noble and Surgeon General Barnes, another witness, have died; Marshal Henry, a bailiff, a detective, the driver and the guard of the jail wagon have been dismissed; Dr. Gray, an expert witness, has been shot at, and Dr. McDonnell is under investigation. After all this is not a long or shocking list of casualties when it is remembered that it is a year since the trial and many persons took part in the trial.

A DIZZY and Unreliable Story About a Famous Case. CINCINNATI, June 13.—The publication was made here today of the arrest on Monday afternoon at Columbus, Ohio, of Wm. Dierley, the negro charged with the murder of the Gibbons children at Ashland, December 24, 1881. Fannie and Robbie Gibbons and Emma Carries were found dead in the burning house. The girls had been outraged. Three men were arrested—George Ellis, Wm. Neal and Willis Craft. Ellis made a confession upon which he was convicted and sentenced to be hanged, but was hung by a mob. Neal and Craft were also sentenced to be hanged, and are now awaiting the decision of the Governor as to the day of execution.

THE ANSLAND TRAGEDY. CINCINNATI, June 13.—The publication was made here today of the arrest on Monday afternoon at Columbus, Ohio, of Wm. DUKES' FATE.

He is shot to Death by the Son of His Victim.

PITTSBURGH, June 13.—The Post's Uniontown, Pa., special says: James Nutt, son of State Treasurer, Captain A. C. Nutt, deceased, shot and killed N. L. Duke, his father's murderer, this evening at half-past seven o'clock. He shot four times, all the balls taking effect. Duke died instantly. Duke had been frequently warned of his danger in remaining in Uniontown, and he lately said that he would either stay there or in the cemetery. It is said that he had expressed a fear of the son of Captain Nutt, and was never on the street after night.

To-day James Nutt was seen practicing with a revolver at his home, and this evening at about half past seven o'clock he was standing near the postoffice when Duke came along. As he was passing he turned his head and noticed young Nutt just as he stepped from the doorway and fired the shot taking effect in Duke's side. Duke started to run when Nutt followed and shot again. By this time Duke was on the postoffice steps when he received another shot and fell inside the door. Nutt followed and fired several more shots in Duke's back, one taking effect in the neck. Duke was dead before any one could get to him. The revolver that did the work is the same that Captain Nutt carried on the morning of his death. Young Nutt gave himself up and is now held at the postoffice. Five shots were fired, four taking effect. The coroner's jury is now sitting. Excitement is running high.

A New House in Chicago.

Special to the Intelligencer.

NEW COLUMBIAN, Ohio, June 13.—The Engineers of the Mt. Vernon Coalition & Wheeling Railroad crossed the Marietta Division of the Wheeling & Lake Erie last night, having resumed the surveys east of Coalition. Arrangements have been made to survey all the competing lines. The company are promptly ready to start work. The distance from Wheeling to Chicago via the B. & O. is 468 miles. Via Pan Handle 489 miles. Via Mt. Vernon Coalition & Wheeling 423 miles, sixty miles shorter than the Pan Handle and forty miles shorter than the B. & O. The new line will have 100 miles of the finest coal and iron ore fields in the State.

NEW ORLEANS AND THE GIBBONS CASE.

NEW ORLEANS, June 13.—The City Council decided to-night to fix the tax levy for the current year at twenty mills on the dollar. The ordinance will be signed in the morning. This action was taken to prevent Mrs. Myra Clark Gaines from collecting her judgment of nearly two millions against the city before the case can be decided on appeal by the Supreme Court. The city was not able to procure the necessary bonds to raise the money for the three millions, and was therefore compelled to take a default appeal, under the operation of which there is no suspension of the judgment in the lower court during the pendency of the suit in the Appellate Court at Washington. There is no doubt that the Council's action will have the effect intended. Twenty mills will meet all obligations except the Gaines' claims.

A Missouri Cyclone.

CHILLICOTHE, Mo., June 13.—A tornado visited this city, doing considerable damage. The High School bell tower was injured. Milbank's engine room and J. L. Myers' barn were unroofed. Curry's barn was moved from the foundation and Dennis Wolfkalk's residence, five miles southeast from here, was demolished. A family was carried through the air about 500 yards. At Union, near here, the Baptist brick building was blown away. In the city, eighteen miles southwest, eleven buildings were destroyed. Thousands of trees were uprooted, and three-fourths of the apple crop around here is destroyed.

FOREIGN NEWS.

LONDON, June 13.—The trial of the men concerned in the dynamite conspiracy was resumed this morning. The detectives stated that Ansbury, on being apprehended, was asked to give an account of himself, and was told if he refused he would have himself to blame for anything which happened to him. He said he came from America. Chief Justice Coleridge expressed the opinion that as the prisoner was not provided with counsel no statement elicited by threat or promise would be received against him. The evidence during the trial showed a connection between Ansbury and Dr. Gallagher was proved. The latter introduced the former at Charing Cross Hotel as "Mr. Gallagher," in order that he might be admitted to the telegraph office at Ansbury. In examining Inspector Melville, in regard to words which passed between them when the former was arrested, he called the inspector a liar, because he had denied he said to him (Ansbury) at that time "You are a better man than I am."

CHIEF JUSTICE COLERIDGE then interceded and retired. A Police Inspector of Glasgow, testified that he visited Bernard Gallagher while in prison here. Gallagher stated that he knew the other prisoners, but said he was not connected with the dynamite schools in New York. He said that he knew that Donovan Koss presided over one of the schools in New York, and that he was certain lived in Fermoy, Ireland, under the name of Koss, after he left America, and he was connected with the Gallagher.

HE COUNSEL, two pp. New York, June 13.—A full scene of population picturesque varied the Monday of J. J. Moran's trial. The trial was held in the Court of Sessions. The trial was held in the Court of Sessions. The trial was held in the Court of Sessions.

THE GARFIELD LETTERS.

A Report that Lacks Verification—Mr. Hinsdale's Statement.

CLEVELAND, O., June 12.—The Herald today prints the following dispatch from Washington: "A story is in circulation here to the effect that the papers placed in the hands of Professor Hinsdale, the literary executor of the late President Garfield, to edit and prepare the same for publication, in connection with the speeches and State papers, embrace a number of very important letters and telegrams sent from New York at the time of the nomination of Collector Robertson. The alleged 'midnight' dispatch of Mr. Whitelaw Reid, and four or two others in the same line, from the same period, but never published, are said to be in the papers turned over to Professor Hinsdale. Those who take stock in the story say that if Professor Hinsdale allows the letters and dispatches to be published, the Robertson case will be published there will be a sensation in New York political circles. It is asserted, also, that there is documentary evidence in existence showing that President Garfield had decided to withdraw the nomination of Robertson and had the rupture with Conkling, but was finally overruled by Blaine and Whitelaw Reid. Gentlemen here who were intimate with the late President, however, deny the statement. No copies of the Robertson case called upon Mr. Hinsdale at his office in the Board of Education building, and permitting him to read the dispatch as given above, inquired concerning the truth of the statements contained therein, Mr. Hinsdale dictated his response as follows: "Mr. Hinsdale has published no telegraphic dispatches whatever, relating to President Garfield in any way. He has published in an appendix to the first volume of his edition of the Works of the late President Garfield, the letters and telegrams published by Shuckers last year. The edition of President Garfield's Works, edited by Mr. Hinsdale, in two volumes, has already appeared. The volumes are accompanied by a full table of contents, and a voluminous index. Nothing more relating to President Garfield is to be published at present by Mr. Hinsdale, who finished the duties entrusted to him by Mrs. Garfield several months ago. No copies of the dispatches were turned over to Mr. Hinsdale for publication."

DOUBLE WEDDING.

A Brilliant Affair at the Residence of D. C. List, Esq.

Last evening the residence of D. C. List, Esq., the highly respected banker, presented a novel and brilliant scene. The two remaining daughters were to be married, Miss Elizabeth to Mr. James Charles Williams, of Baltimore, and Miss Mary Hannah to Mr. Alexander Warner, of Portsmouth, Ohio. More than a thousand invitations had been issued, many of them to friends at a distance. The hour set for the ceremony was nine o'clock. An hour earlier the guests began to arrive, and soon the spacious rooms were filled with brilliant company of ladies and gentlemen representing the best social life of Wheeling, together with many friends of the family from the surrounding country. The guests were received in the parlor in artistic profusion, combined with nice regard to form and color. Grand entrance was displayed in the hall, the ladies, most of whom wore diamonds in some form, and many of them rich jewels. A very beautiful feature was the appearance of the newly married ladies in their wedding dresses.

PRODUCTION OF OIL.

These oil ranges from "light" to "heavy," and must be kept apart and graded with the strictest exactness. They must be tanked, shipped and carried through all the various processes with a minute attention to every detail that requires thorough knowledge of the business. I paid a visit to the oil fields in the West, and examined the oil produced by various articles in testing oil. The process is a very ingenious. Two tests are made with the view of obtaining the specific gravity of the oil. The tested goods is bottled, labeled and placed on one of a row of shelves until the oil has become clear, and the specific gravity is taken. Among the samples was one taken from the recently developed Stillwell region. It shows a specific gravity of 26.00 and is a perfect lubricator, selling at \$5.00 per barrel. It is worth, when oil is a good price, \$10.00. The oil produced by this well is used for use on land without any manipulation. The Standard Oil Company interferes with its sale, however, by putting upon the market a lubricator made from the same oil, which is sold at a lower price than the oil produced by this well. The oil produced by this well is used for use on land without any manipulation. The Standard Oil Company interferes with its sale, however, by putting upon the market a lubricator made from the same oil, which is sold at a lower price than the oil produced by this well.

QUEEN VICTORIA'S HEALTH.

LONDON, June 13.—The truth states that the Queen has recovered from the injury to her knee. The depression of Her Majesty's spirits is, however, said to cause some anxiety, owing to the influence on her general health of the incident of the Queen to Scotland on the 29th.

AFRICA OF THE EFFECT.

CAIRO, June 13.—Great excitement was caused here on account of the conversion of a young Mahometan by American missionaries. Arab fanaticism attempted to treat the convert, but British Consul refused to allow the attack. It is probable he will be sent to Cyprus for safety.

BRIEF TELEGRAMS.

The New York Board of Trade recommends that when the bill relieving commercial travelers from interference by State laws is introduced in Congress the measure should receive the support of the various trade organizations of the country as well as the business men in general.

Frank Thornton and Bernard Nolan, who were arrested for selling tickets for an imaginary party, are reported to be for the purpose of leaving the country. The patronage of the iron workers of Buffalo, Colorado, is said to be "wonderful." Cleveland, Toledo and other western cities.

Fire rains in Virginia and North Carolina the past week have been of great benefit to the crop. The prospects are bright for the year. The prospects are bright for the year. The prospects are bright for the year.

Benjamin F. Porter, private secretary to Chief Justice of the Creek Nation, Indian Territory, was found dead yesterday, shot through the heart.

A fearful tornado swept over Cleveland, Pa., last night, demolishing eighty-six large oil rigs and five buildings, and deluging the entire town, causing great loss of property.

CAPITAL CULLINGS. The Circuit Court declined to dismiss the charge against Mrs. Mason, the wife of Sergeant Mason, from withdrawing her money from the bank she has paid the note, Bigelow, his expenses and a reasonable compensation, to be agreed upon between the parties.

VOLCANO ERUPTIONS.

ABOUT THE CENTER OF THE STATE.

A Town That Has Been Disrupted by the Standard Company—The New Strike at Stillwell—Road Notes from Parkersburg—Increase in Value of Real Estate.

Special Correspondence of the Intelligencer.

VOLCANO, June 10.—Resident of Volcano remind me of what I read in my school days in the history I deplored with greater persistence than I studied, of the ancient Aztecs who were always looking toward the east for the coming of Montezuma. People here are not looking for a Montezuma, of course, but it is asserted that the first thing a resident of the place does in the morning is to visit the ticket office and await the incoming of the train over the eastern hill, hoping it will bring news of a rise in oil. Even the babies, I am told, sleep with their little faces to the east, and smile hopefully in their sleep when they hear, as in a dream, the whistle of the engine, and I don't blame them, for every thing here is so dead and dull that the sound made by a miserable discouraged train, for the moment it looks up to see a silent derrick, and immediately falls to cursing the Standard Oil Company. They all do.

THE TOWN OF VOLCANO.

Volcano centers around a deep narrow valley from which radiate four "hollows." Altogether there are 600 people scattered about these hollows, within a radius of three miles. No two houses are on the same level. Here a house leans up against the side of a hill presenting three stories to the beholder from the front while behind the roof is on a level with the ground. The houses are built on the side of a hill and seems ready to fall at the first puff of wind. But it out. Nothing ever falls in Volcano, but oil derricks. When eighteen years ago oil was first discovered there was a mad rush from all parts of the State to this place, and a western mining camp was established. A number of Eastern people came in and a score of fine houses went up. They are here to day and they look still out of place amid the general dreariness of the place. An enterprising speculator built an opera house, and first class companies only were booked. The fallen fortunes of the town has not yet reached all parts of the theatrical program, and the opera house is a good story drifts in, but it only looks like a look at the receipts in the box office to make it then understand what they should have known. "Foggy's Ferry," Duprez & Benedict, Alf Burnett, Ed. Adams' and other theatrical companies, and a few Western mining camps were here the past season and wish they were not. From the hotel veranda I can count ninety-one derricks, about one sixth the number in this oil district. Of the 600 or 600 derricks in the district, only 100 are in operation. The rest will yield from one to two barrels of oil per day is considered worth pumping. About sixty more are pumped on the Standard Oil Company's property. The first seven letters of the alphabet.

These oil ranges from "light" to "heavy," and must be kept apart and graded with the strictest exactness. Among the samples was one taken from the recently developed Stillwell region. It shows a specific gravity of 26.00 and is a perfect lubricator, selling at \$5.00 per barrel. It is worth, when oil is a good price, \$10.00. The oil produced by this well is used for use on land without any manipulation. The Standard Oil Company interferes with its sale, however, by putting upon the market a lubricator made from the same oil, which is sold at a lower price than the oil produced by this well.

These oil ranges from "light" to "heavy," and must be kept apart and graded with the strictest exactness. They must be tanked, shipped and carried through all the various processes with a minute attention to every detail that requires thorough knowledge of the business. I paid a visit to the oil fields in the West, and examined the oil produced by various articles in testing oil. The process is a very ingenious. Two tests are made with the view of obtaining the specific gravity of the oil. The tested goods is bottled, labeled and placed on one of a row of shelves until the oil has become clear, and the specific gravity is taken.
