FROM THE CAPITOL.

UNKNOWN wires may puzzle the agents sharp, but the politicians have long had a system in good working order.

It Higgins the Avenger doesn't approve of the first draft of the message the President will have to do it all over--won't he? And how awkward that will be.

Whoa! We shall never know who wrote "B--S--w," but it never could have been written about a Wheeling news item. We don't have that kind here.

The New York Star (Dem.) says it is "all nonsense" to speak of the Republican party as dead. Nonsense, dear boy? It's a stark madness! People who can't distinguish a corpse from the winner in the next race ought to be put under treatment for it.

As Congress approaches those Democrats who thought Mr. Hendricks was talking gospel truth on the stump will want to know when they are going to get their per capita of the four hundred millions of dollars piled up in the Treasury by a wasteful and law-defying party--they will indeed!

GOVERNOR HILL relieves the President of Civil Service embarrassment and remains the active party man by putting into a State office that notorious heeler and rouser Sterling. It was the appointment of Sterling to be a Custom House weigher that led the Mugwumps to think that after all Civil Service reform might be a "barren ideal."

MR. PARNELL is not worrying himself about the success of either of the great English parties. He is nursing a little party of his own, and he is willing to throw his weight where he can make the best terms. It is not to be denied that he is steadily gaining. He has his forces well in hand and employs them after the fashion of the most practical politicians.

SPAKING of the quarantine against office-seekers at the White House, the Elk River Progress (solid Dem.) remarks in an injured tone of voice: "We thought 'hearing applications for office and the determination of appointments' was a good part of the President's duty. That's why most of us voted for him." Yes, but the Mugwumps had made other and previous arrangements.

While everybody was wondering how the B. & O. was going to get into New York, and other railroad companies were flustering themselves that it could not get in at all, the shrewd management of that corporation was sharpening its sword to cut the Gordian knot. The arrangement for terminal facilities on Staten Island is a masterpiece of railroad diplomacy which will place the young commander still higher up in the rank of railroad Presidents.

The B. & O. not only breaks by a brilliant coup the seemingly impregnable line of defense, but it secures for itself a site for terminal facilities equal to the best. The progress of this trunk line northward from Baltimore has been beset with great difficulties, not the least of which was its progress through Philadelphia. But the company has worked and waited--more working than waiting--until now the way is clear to the great objective point. By this time it is probable that the older Presidents understand that the young President of the B. & O. is able to hold his own.

In behalf of Postmaster General Vilas it is said that in his foreboding report that he will effectually silence the criticisms of his conduct in the matter of the foreign mail lettings. In that case Mr. Vilas will show how an executive officer can make of no effect a mandatory act of Congress. On the 3d of March last Congress appropriated "for the transportation of foreign mails, including railway transit across the Isthmus of Panama, \$800,000." The Postmaster General was authorized "to enter into contracts for the transportation of any part of said foreign mails, after legal advisement, with the lowest responsible bidder, at a rate not exceeding fifty cents a nautical mile on the trip way actually traveled between the terminal points."

It was further provided "that the mails so contracted shall be carried on American steamships, and the aggregate of such contracts shall not exceed one-half of the sum hereby appropriated." The intent of Congress was, of course, to encourage American shipping. Mr. Vilas gave the work to foreign ships. The Postmaster General may show that in his judgment Congress erred, but it may put him to some pains to show that a cabinet officer out-ranks Congress as a law-making power.

REFORMED JUDAISM.

The Baltimore Rabbi Denounces the Action of the Pittsburgh Conference. BALTIMORE, Nov. 21.--Sermons were preached in this city to-day at the various Jewish synagogues denouncing the action of the recent convention of rabbis held in Pittsburgh, and severely criticizing their published ideas on reformed Judaism.

Rev. Dr. Snod, pastor of Hanover Street Synagogue, was the most influential in the city, was particularly severe in his strictures, and the official body has taken action looking to the severance of the connection with the Union of American Hebrew Congregations, by which the Jewish Society at Cincinnati is supported. There is a great deal of bitter feeling among both the Orthodox and Reformed Hebrews over the assertion made that "the rite of circumcision is a relic of barbarism," and that the idea of a personal God is old-fashioned, and should be abolished.

A Prize Fight on Tap.

PITTSBURGH, Pa., Nov. 22.--The prize fight between Billy Bradburn, of Chicago, and William Galig, better known as Pittsburgh Bill, which is to take place to-morrow night within 100 miles of this city is creating considerable excitement among the sporting fraternity here. Both men are in fine condition, and a hard mill is expected. It is said that Paddy Ryan and a number of Eastern and Western sports will be present.

WEST VIRGINIA NEWS NOTES. The Harper's Ferry Property--The Fight Over the Farm and Graton Post-offices--The Second District Congressman Sat Down Upon by Cleveland.

Special Correspondence of the Intelligencer. WASHINGTON, Nov. 21.--The matter set you last week in regard to the Harper's Ferry property and the Chesapeake & Ohio Canal Company, has created some comment among the newspapers and parties interested on both sides. Previous to the Harper's Ferry publication, the case had not been made public. Reporters of various papers of this city and Baltimore have interviewed Mr. McCue Solicitor of the Treasury, on the subject, and that official is quoted as saying that while the case is not yet settled, the United States considered itself the exclusive owner of the water power, and that the canal never had any authority for using any part of it. The case is a dark one for the latter company, and may result in its being forced out of the property.

There is going to be a little trouble over the Postoffice in West Virginia. The contest over the Fairmont office, about which something has already been published, has resolved itself into a very amusing tussle between the President and the Democracy of the good old county of Marion. When Mr. Cleveland was approached by Mr. Wilson on the subject of immediately appointing Postmaster Reed's successor, the Chief Executive intimated with some reserve that inasmuch as he was President, the Democrats of West Virginia might accord him the right to say who should fill at least one petty office in the State. The Second District Congressman at Fairmont, Mr. Kelli, who is a Democrat, cheerfully acceded him the right to say who should fill all the offices, but humbly petitioned him not to fill them with Republicans. Then the President, with a still greater show of temper, referred to the fact that an ex-President had requested the reappointment of Mr. Reed, and as a matter of common courtesy to a predecessor in office, he felt that he ought to grant an request of that kind when then mildly suggested that ex-President Hayes, Postmaster Reed's friend, was not entitled to that courtesy, having been a "fraudulent President."

It is said that when this argument was advanced the President went into a fit of wrath with more warmth than had characterized any of his former utterances, informed the Congressman that he considered Mr. Hayes had held as good a title to his seat as he (Mr. Cleveland) held to his. A very prominent Democrat of the State, who was present at the interview is authority for the above statement. He and many others express some indignation at the idea of Mr. Reed's successor not being appointed. But the President is not to be deterred by the threats of any of his political opponents of an intention to sustain his retention of having held back, even though it costs the Democracy the county of Marion.

At Graton is another important post-office over which some of the boys are greatly exercised. Jim Mason's West Virginia Democrat, of last week, through a correspondent, who seems to be possessed of a fertile imagination, makes some remarkably unflattering and startling disclosures in regard to the political partisans with regard to that office. Postmaster Knust's term does not expire for nearly two years, and it is asserted that he is to be allowed to serve his term out. Through Mr. Knust is a consistent Republican, and a good one, and a "loyal partisan," while his efficiency as postmaster is unquestioned. It is not, therefore, remarkable or surprising that honest, fair-minded Democrats admit that he is the best man for the office, and that at the expiration of his term. But this fact alone is not the remarkable disclosure made by the Democrat. The startling statement is made that a bargain has been entered into between the Camden Democrats and Mr. Knust's friends, by the terms of which the postmaster will not only be retained, but reappointed. In the meantime, as the story goes, Hon. John H. Knust, brother of the postmaster, and also a good Republican, and a "loyal partisan," will be supported by the Camden Democrats, with the understanding that he will vote for Mr. Camden for U. S. Senator.

This story is denounced as wholly untrue by Mr. Knust's friends and all leading Democratic politicians in this city, who claim to know just what he is talking of, brands it as "a lie gotten up to injure Camden." The wily correspondent had evidently a double purpose in writing his sensational story. He not only wanted to injure Camden, but he also wanted to injure Mr. Knust's standing in the city, in order to induce the latter to assist some patriotic Democrat, who is not a Camden man, and is running as a dark horse for the postoffice, into the office here to be appointed.

When it is made a strong fight may be looked for between the applicants. The local feeling growing out of the recent election contest will be an element in this matter. Mr. Knust will be again expected to speculate concerning the healthfulness of the spinal column of the President in his treatment of West Virginia office-seekers.

Speaking of backbone, reminds me of a prominent official here from our State who has been in the office of the State Comptroller for Governor in 1888. He named them. They are Dr. Logan, Col. Grubb (of Brooke county), Mayor Jacob Gombel, of Wheeling, and John W. Mason, of Grafton. It's rather early to talk about the State campaign of '88 now, and I made the suggestion to the gentleman, "Oh, no, no, no," he said, "the Democrats have not yet commenced to talk about such matters. With all the disaffection in their own ranks, and the fact that we came so near defeating them last year before them, they will push their strongest men forward. But with one of the men I have named and with John Sherman, Blaine, or Logan on the National ticket, we can carry West Virginia."

PERSONAL MENTION.

Among the West Virginia arrivals this week are the Hon. J. M. Bennett, of Weston, Hon. John Bazel, of Clarkburg, Col. Robert White and Rev. Father Sullivan, of Wheeling, James St. Clair, of Kanawha, Rev. Father O'Connor, of Morgantown, Frank Park, Esq., of Pocahontas. The

TWO DEEDS OF BLOOD.

AN INTOXICATED MAN SHOT DOWN.

At Clarkburg by an Enraged Saloon Keeper Because He Threw a Stone Through His Window--Assassination of Thornton Cartwright, Manassing, W. Va.

Special Dispatch to the Intelligencer. CLARKSBURG, W. Va., Nov. 22.--At 12 o'clock last night a horrible murder was committed at this place, which has caused intense excitement. The victim is a young married man named Wm. Owens, generally known as "Blue Hen" Owens. The weapon used was a 38-caliber revolver. The ball entered two inches below the right eye, and passed through the brain. The circumstances attending the tragedy are as far as can be learned are as follows: Owens, who was under the influence of liquor, called at a saloon kept by John Kelly, who refused to let him in, being very hard luck. Both players entered great nervousness from now on to the close, the excitement among the spectators having meanwhile arisen to fever heat. Sloson ran 25 in the twenty-fifth inning, and was followed by Schaeffer, who missed in the twenty-sixth, and Sloson stopped at two. Schaeffer then ran the nine he needed, and the game ended. The result of the tournament is therefore a triple tie, which, as was announced before the commencement of tonight's game, will be played off--no division of the stake money to be allowed. Arrangements for playing off the ties can not be made to-night, but it is thought that the contest will be completed on the 24th, and the tournament played to an end, commencing Tuesday night, with one game each of 300 paces.

INTERNAL REVENUE BUREAU.

Commissioner Miller's First Report--How the Money Goes for Pipe and Bowls. WASHINGTON, D. C., Nov. 22.--The annual report of the Commissioner of Internal Revenue, for the fiscal year ending June 30, 1885, shows total receipts for that year, \$112,421,000 as compared with \$121,500,000 for 1884, \$144,553,000 for 1883, and \$146,523,000 for 1882. The falling off is attributed to the exporting of about 7,000,000 gallons of distilled spirits which will have to be brought back to find a market; and this, with more than 10,000,000 gallons that had, on June 30 last, been in bond for more than three years. Commissioner Miller estimates that the current year's receipts to \$116,000,000. The cost of collection was \$4,465,430, as compared with \$5,076,914 in 1884. The total expenses of collection are estimated at 3.9 percent of the amount collected. The amount collected in West Virginia was \$543,188.90.

Increased production is rated as follows in the articles named: Gallons of spirits distilled from apples, peaches and grapes, 319,719; number of cigars, 150,058,415; pounds of snuff, 739,149; pounds of tobacco, 5,822,200; barrels of fermented liquors, 187,334. But two articles show a decrease as follows: Gallons of spirits distilled from grain, molasses and other materials, 10,790,005; number of cigars, 95,646,384. The last Congress reduced the number of revenue agents from thirty-five to twenty. The Commissioner desires authority to increase the number.

MURDER IN MARIETTA COUNTY.

Thornton Cartwright Assassinated--Origin of the Trouble. About one year ago a man named John Baker, about 80 years of age, was mysteriously murdered in his house, about three miles from Mannington, Marion county. Although he lived in a rather thickly populated settlement and the murder was committed with an axe at night in his own home, the perpetrator could be discovered. Baker was wealthy, and a detective has been engaged all summer in working on the case, and some time ago a man named Satterfield was arrested and placed in jail at Clarksville, on a charge of having had his hand in the murder. His brother, who was also suspected, killed himself during the trial.

Saturday morning early, John Cartwright, who lives in the neighborhood of Mannington, on a State warrant, about 9 o'clock the same morning his father, Thornton Cartwright, was coming to Mannington to see his son, and had reached a point about a mile from town, when he was shot and killed. The murderer was a man who was coming apparently from the house, a man who was some distance ahead of Cartwright saw him fall from his horse, and ran back and summoned help. The woman, who is about 60 years of age, was conveyed to town and given into charge of a doctor, who, at last reports, was probing for the ball, which entered a point near one of his thighs. The wound is not serious, and is supposed to be healed. The shooting has something to do with the mysterious surroundings of the former murder. The assassin could not be found. The greatest excitement prevails in the neighborhood.

SHOT HIS WIFE.

A Young Cree Murdered in Cold Blood by Her Jealous Husband. CHICAGO, Nov. 22.--Sammuel R. Smith shot and killed his young wife last night, although the act of the tragedy was not disclosed until to-day. They were occupying a single room at No. 310 Monroe street. A shot was fired about one o'clock which alarmed some of the inmates, but their fears were quieted by Smith appearing and stating that his shotgun had been accidentally discharged. This forenoon the discovery was made that he had killed his wife and fled during the night. His wife was supposed to be a Creole and formerly lived in the city of Buffalo, and was more than 19 years old, and from letters found in the room appeared to have been engaged to a Dr. J. S. H. Bickford, of Cleveland, who followed her to Chicago, and finally left, declaring in a letter that he intended to commit suicide. It is thought that Smith at one time lived in Erie, Pa. He was in the employ of the J. A. Schimmel Reserving Company of this city. But little is known of him. Jealousy is supposed to have actuated him to the crime.

THE BILLIARD TOURNAMENT.

Ends in a Tie--The "Wizard" Takes the Last Game from Schaeffer. CHICAGO, ILL., Nov. 21.--Speculators in tickets for the sixth game of the great billiard tournament drove rabidly to the Central Music Hall being jammed to overflowing with spectators. Over two thousand people witnessed the contest, which was between Schaeffer and Sloson. The contest was a very close one, and the commencement of the game was odds of \$100 to \$70, quotations being nearly even, however, when the balls had been set rolling. Sloson and Vignaux having already won two games, their credit and Schaeffer's were at a low ebb. The contest was won to-night's game to make the tournament result in a tie.

Schaeffer won the bank and scored on the spot, but fell down on a one-cushion shot. Schaeffer then took a cue and a magnificent two-cushion bank shot Sloson then grouped the ivories, and by careful nursing and daring open-table play placed 33 buttons to his credit, when he collapsed on a failure to get the balls out of the pocket. Schaeffer stepped to the table, but tumbled on his third attempt. Sloson followed with 17. Singles and couples followed by both players, with Schaeffer markedly nervous until the fifth inning, when the "Wizard" came down with a series of brilliant scores, 37, which trifling gain was nullified by Sloson running 27 in the seventh. At this point Sloson seemed to imbibe a modicum of his opponent's pet, prefacing each shot with an extraordinary amount of calculation. He scored together 44, though which run was followed by a run of 33 by Schaeffer. Again did Sloson get into the thirties in the ninth inning. By a trio of delicate mass shots Schaeffer took the balls, and checked off 74, missing on a simple draw. Sloson followed with 23, leaving the score, Sloson 201, Schaeffer 132. Schaeffer failed to score on the eleventh inning, and left Sloson an easily obtained 36, following this with 20 more to his own credit. The

BALKAN CONFERENCE.

AGAINST THE SERBIAN INVASION.

Of Withdrawer and Wars King Milan to Withdraw or He Will be Deposed--Bulgarians Occupy Dragoman--Wide Invasion by the Servians--Sofia Falls.

CONSTANTINOPLE, Nov. 22.--The Balkan conference has drafted a final protocol which embodies its decisions, declaring the restoration of the status quo ante is equally binding upon Servia and Bulgaria. It is reported if King Milan will refuse immediate peace under the terms of the conference he will be declared an enemy to the peace of Europe, and two of the signatory powers will enforce his deposition. It was rumored here to-day that the Turkish troops had had a skirmish with the Bulgarians at Dragoman, and that the Bulgarians were to be driven out of the Dragoman peninsula. Sofia, Nov. 22.--The Servians have been besieging Widin. A battle was fought on the 17th, 18th and 19th instants included 11 officers killed and 22 wounded. Emperor Francis Joseph, in compliance with the request of the Austrian Red Cross Society to go to Servia. A dispatch from Tzaribrod says the Bulgarians have massacred the Serbian Lieutenant Kocich, who was found on the field of battle wounded and Serbian Lieutenants Schviko and Katkovich and were prisoners of war. General Lesbujnia telegraphs that the Bulgarian troops which had been fighting in field near Sofia, have been encountered in the fortress of that town, and that the entire districts between Timok, Belgradjik and the lower Danube has been cleared of Bulgarians.

THE B. & O. RAILROAD.

To Get into New York City as an Independent Line. BALTIMORE, Md., Nov. 21.--It is now settled that the Baltimore & Ohio Railroad Company is to reach New York as an independent line, it being announced on authority that a contract has been made with the Rapid Transit Railroad Company on Staten Island. This latter organization controls nearly the entire shore line of Staten Island, having secured the right of way for a rapid transit survey line which encircle the island, and with the immense water front thus gained, possesses beyond all comparison the most extensive and perfect terminal facilities known to New York City. The contract, which was made with the Rapid Transit Company was to-day signed and executed, this action immediately following the formal approval of the stockholders of the two companies.

The stockholders of the Rapid Company were then turned over to Treasurer Jams, of the Baltimore & Ohio, who now has them in his possession. A new Board of Directors has been elected, and its membership is largely that of the B. & O., and, in addition, it will fill an important position. In order to connect the new property with the new Philadelphia line, and thus make it a portion of the B. & O. system, a new line will be built from the city of New York, through the Narrows from European ports to New York must pass the B. & O. wharves.

From Staten Island there is now a ferry direct to the Battery, but it is the intention of the company to put on this ferry a new and improved service, and to connect it with the main Brooklyn ferry. The time across the ferry will not exceed fifteen minutes, and the new Brooklyn ferry will be run so speedily, it will not be so short by this new line than by any other now constructed.

On Staten Island itself, with this great advantage, it is comparatively easy to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers and docks for other purposes, from which vessels drawing deep water can be loaded without using the lighters. Indeed, so comparatively easy is it to construct a new and improved ferry from which coal can be loaded direct into steamers; also grain warehouses and elevators and piers
