The Intelligencer.

WHEELING, W. VA., APRIL 11, 1887.

The Good is Always Commendable.
Those railroad companies that show a disposition to obey the commerce law find it hard to please everybody. To obey the law is to step on the toes of somebody who has been in receipt of exceptional favors, and that person is likely to think the law is enforced for the sole object of making him uncomfortable. Perhaps, also, he suspects that somebody is still escaping.

The Pittsburgh Dispatch, which has been very earnest about the regulation of Interstate commerce by Congress, thinks "the sensitiveness with which the Pennsylvania Railroad withdraws all passes under the indirect prohibition of the Interstate commerce law and keeps them issued to legislators despite the unmistakable prohibition of the State Constitution, is one of the striking features of the current railroad policy."

It is unfortunate that any railroad company will not obey the fundamental law of the State to which it owes its life. It is a sad commentary, also, that the great Commonwealth of Pennsylvania is powerless to compel obedience to its laws. But it is to be regarded as commendable that the great railroads of the country are showing a disposition to obey an act of Congress that makes necessary an entire new modeling of their way of conducting business and a complete recasting of their tariffs.

It is also agreeable to know that an act of the Congress of the United States is readily obeyed because it is the voice of the highest authority and cannot with safety be disobeyed. Men disobey State laws who do not dare to fly in the face of the Government of the United States. Let us give men and corporations credit for all the good that is in them; that is a way to help them to do better.

A Blazing Star.
That is to say, a star of the dramatic firmament blazing mad. The other name of the star is Sarah Bernhard, of whom more or less of varying kind has been heard. It may not be commonly known, or readily believed, that the divine Sarah sometimes has occasion to fortify the inner woman with common every-day food.

That this performance occurs sometimes we are bound to believe from the fact that she recently thrashed a waiter, for which melo-dramatic performance action for assault and battery has been entered against her.

Sarah's lunch being four minutes late by the clock, she fell upon the waiter, knocked the tray out of his hand, smashed the crockery, scattered the lunch, pulled the waiter's ear with a vicious vigor and in other ways made the fellow glad to escape from her inspired presence. The first star in the Gaiety galaxy was so furious that she could not be induced to eat, and she rumbled off to play "Theodora" on a lunchless stomach.

On her return from Boston to New York Sarah is to have a grand reception, and the offended waiter has made plain but satisfactory arrangements to be there with an officer of the law to give the proceeding all the éclat of an arrest for assault and battery.

The painful part of the sad affair is that it reveals to the blind worshippers of the French goddess the mortal fact that their divinity eats. That may be fatal to the charm she has wrought.

Ireland's Hope.
Mr. Parnell expresses himself as well pleased with the situation, adding that he has not before permitted himself to look so hopefully to the near future. That the behavior of the Tories must be hard to satisfy. Between their effort to put through a brutal coercion act and the snap-judgment view in which they are trying to do it, the cause of Ireland is making rapid headway with the people of England.

Since the enlargement of the outrage at Mr. Gladstone's instance public opinion in England is not confined to the nobles yet to the city of London. A Parliamentary election comes nearer than ever before to testing the sense of the country.

When it shall have been made as clear to the people as it is to Mr. Gladstone, that the contest is of interest to Englishmen as well as to Irishmen, that, in short, it is the battle of the "masses against the classes," the Tory back will be broken. That time draws nearer every day. It is, therefore, no wonder that Mr. Parnell is pleased.

The Cigarette Girl.
That there is a cigarette girl is unhappy truth. We may regret that it is so, but there is too great a weight of credible testimony to permit us to doubt the fact. The dealer who caters to her recently cultivated taste says it is so, and he says it with pride as one who beholds his warm coming more and more into refined society; for the cigarette girl is not the young person who struggles twelve hours out of the twenty-four for a livelihood.

Further, we are not to doubt that she exists in a particularly objectionable form, because she rather delights to show her wiles where she is certain to be seen. She never takes to the cigarette because she enjoys the weed in that inordinately offensive shape. In fact she has not learned to like tobacco in any form when she takes her health and standing and the sweetness of her maidenhood on the rankness of the cigarette. At first, each and conscience revolt against the hideous thing; but the stomach becomes accustomed to its dose, and the conscience goes into retreat, until the carnal temptation is ready for their joint occupancy.

The cigarette girl is with us, and it is sadly true that her tribe increases. Possi-

bly she is the kind of girl that the cigarette young man admires for her chic; but he wants something different and better when he flings away the fumes of the duds to endeavor to become a real live man discharging the responsibilities of a terribly real life.

If our girls must smoke we beg them to relate into the solid barbarism of their great grandmothers' days and extract their satisfaction from the red pashan with its red atom, or the more homely cornucopia. Their smoking duds or dandahs at other.

ANOTHER CURE FOR CONSUMPTION.

The Injection of Gaseous Prof. Bergeon's Method and its Results.
Chicago Tribune.

Last night at the request of a North Side physician a reporter attended at the corner of Ogden and Fullerton avenues, at the treatment of a patient for consumption by the injection of gas. After the operation was over the physician stated to the reporter that in the discussion of Prof. Bergeon's method of curing consumption it had been said that the substance used was carbonic acid gas, while really Prof. Bergeon's method was sulphurated hydrogen and carbonic acid gas, the latter being the vehicle for conveying the sulphurated hydrogen into the lungs.

It has been said that Prof. Bergeon found the injection of carbonic acid gas had a very beneficial effect in healing persons affected with consumption and other lung troubles. This statement is incorrect. Prof. Bergeon claims that carbonic acid passed through natural mineral waters containing sulphurated hydrogen is a cure for consumption. But he also admits that in the treatment of patients who have become more or less tuberculous, tuberculous are found two years after the cure. The professor makes his carbonic acid gas in the usual way by pouring upon sodium bicarbonate diluted sulphuric acid, which he forces through the mineral waters. These waters, taken from a spring 2,300 feet above the sea, and situated in a valley sixty miles from Pan. The water contains .18 cubic inches of sulphurated hydrogen to the pint, two grains chloride of sodium, and two grains of other salts.

These waters do not contain enough sulphurated hydrogen to be of any benefit, and he has been seeking for waters more heavily charged. He also states that artificially prepared sulphurated hydrogen does not give beneficial results.

Prof. Bergeon's method was introduced into the Cook County Hospital two months ago, and in the treatment the blue Lick waters of Kentucky have been used. The professor claims that the cubic inches of sulphurated hydrogen to the pint. The waters of the Alpena well, Alpena, Mich., are said to contain 4.42 cubic inches to the pint, and arrangements are being made to obtain a supply from this well. The first patient was a Mexican woman who was in the last stages of consumption. One injection was made and during the twenty-four hours following the treatment the expectoration increased one-half from sixteen to twenty-four ounces. There was no gain of improvement whatever and the patient died in seventy-two hours after the first and only treatment she had received. The second case was that of a young Irishman who showed improvement after the second treatment in the reduction of temperature, respiration and expectoration. His appetite improved and the night sweats ceased. This improvement continued for five days, but was followed by a sudden change—loss of appetite, increased temperature, respiration and expectoration, followed by coughing consumption and death in thirteen days. The treatment was continued in private practice with more favorable results.

Examination of one patient, a woman, the expectoration amounted to eight ounces daily. The temperature was 100, the respiration 32, and the pulse 120. Night-sweats were profuse and the cough incessant, keeping the patient awake all night. She was unable to walk without aid and vomited daily, and her appetite was very poor. After the second treatment the temperature was reduced to 100, and has so continued with but a slight rise. The expectoration was not more than two tablespoonfuls, and the pulse was reduced to 100. The night-sweats ceased entirely and the appetite improved. After the sixth treatment the temperature was 100, respiration 24, and the pulse 100. The expectoration was reduced to a slight mucous plug. The patient ate everything and the vomiting has ceased. The treatment has been continued for six weeks, every other day, and the pulse is now 90, temperature 100, and respiration 20, and there is every sign of improvement. In several other cases there have been similar favorable results, besides an increase in the weight of the patient. In these cases the physician in charge has not stored the usual remedies employed in consumption. Cod-liver oil and phosphates have been prescribed. The patients have in every instance been treated every other day.

Those endeavoring to follow in the scheme of Prof. Bergeon's method and the ones who are trying to get 15-cent discount this if you can.

Stem Winder, with Patent Regulator, made by the M. J. H. W. Co., and is the best and most perfect of its kind. This is decidedly the greatest bargain ever offered to the public.

Those endeavoring to follow in the scheme of Prof. Bergeon's method and the ones who are trying to get 15-cent discount this if you can.

"Olla Soul is Marching on,"

Wanted (Conn.) Herald.

The Rev. Leonard W. Bacon, D.D., who is preaching in Savannah, Georgia, is said by the Morning News of that city to be "brilliant and attractive as a preacher, with much poetic fervor and literary finish, and with many of the highest qualities of the teacher."

The whirling of time has brought about a marvelous change of sentiment during the past thirty years. That long ago Dr. Bacon was settled in Litchfield, and his pupils' teachings then were of a kind, especially on the slavery question, which would not have been tolerated in Savannah. In the winter of '59 and '60 the writer spent a few days in that city, but he didn't deem it advisable to herald himself as a son of John Brown's tutor. A month before we were there the body of that illustrious martyr had commenced mouldering in the grave and his soul was marching on.

Last night at the request of a North Side physician a reporter attended at the corner of Ogden and Fullerton avenues, at the treatment of a patient for consumption by the injection of gas. After the operation was over the physician stated to the reporter that in the discussion of Prof. Bergeon's method of curing consumption it had been said that the substance used was carbonic acid gas, while really Prof. Bergeon's method was sulphurated hydrogen and carbonic acid gas, the latter being the vehicle for conveying the sulphurated hydrogen into the lungs.

It has been said that Prof. Bergeon found the injection of carbonic acid gas had a very beneficial effect in healing persons affected with consumption and other lung troubles. This statement is incorrect. Prof. Bergeon claims that carbonic acid passed through natural mineral waters containing sulphurated hydrogen is a cure for consumption. But he also admits that in the treatment of patients who have become more or less tuberculous, tuberculous are found two years after the cure. The professor makes his carbonic acid gas in the usual way by pouring upon sodium bicarbonate diluted sulphuric acid, which he forces through the mineral waters. These waters, taken from a spring 2,300 feet above the sea, and situated in a valley sixty miles from Pan. The water contains .18 cubic inches of sulphurated hydrogen to the pint, two grains chloride of sodium, and two grains of other salts.

These waters do not contain enough sulphurated hydrogen to be of any benefit, and he has been seeking for waters more heavily charged. He also states that artificially prepared sulphurated hydrogen does not give beneficial results.

Prof. Bergeon's method was introduced into the Cook County Hospital two months ago, and in the treatment the blue Lick waters of Kentucky have been used. The professor claims that the cubic inches of sulphurated hydrogen to the pint. The waters of the Alpena well, Alpena, Mich., are said to contain 4.42 cubic inches to the pint, and arrangements are being made to obtain a supply from this well. The first patient was a Mexican woman who was in the last stages of consumption. One injection was made and during the twenty-four hours following the treatment the expectoration increased one-half from sixteen to twenty-four ounces. There was no gain of improvement whatever and the patient died in seventy-two hours after the first and only treatment she had received. NEW ADVERTISEMENTS.

WANTED—FIFTY PRACTICAL

None need apply except those who are well versed in the use of the steam engine, and who can give instruction in the same. For particulars apply to the undersigned at his office, 100 Fifth Street, New York, N.Y.

LOST—SUNDAY MORNING, A GOLD

Charm containing picture and lock of hair. Liberal reward for its return to the undersigned at his office, 100 Fifth Street, New York, N.Y.

BIOSCOPE FOR SALE—A 4-INCH

Victor Bioscope, but little used; good as new. Can be seen at office of Mr. E. D. East, 1163 Market Street, San Francisco, Cal. Also a Victor Bioscope in first-class order. W. M. D. McCoy, 1011

WANTED—WE DESIRE TO ESTABLISH

A General Agency for the sale of the undersigned's goods, and to act as a collecting agency for the same. For particulars apply to the undersigned at his office, 100 Fifth Street, New York, N.Y.

MISS DILLON

Chorus in Elocution. At 100 Fifth Street, Tuesday, April 12, at 2:30 P.M. and 7:30 P.M.; and Saturday, April 16, at 10 A.M.

JEWETT'S

Refrigerators and Ice Chests. (Lined throughout with zinc and double walls and covered with asbestos.) Most economical and durable refrigerators made. Call and see them at 100 Fifth Street, New York, N.Y.

SELECT BALL!

The Windsor Athletic Association will give a Select Ball. This (Monday) Evening, at Wood's Hall, corner Jacob and Thirty-third Streets, will be in attendance.

CLYDESDALE OATS,

48 Pounds to Strike Bushel. WELCOME OATS, 44 lbs to Strike bushel. GERMAN MILLER and Central Park Lawn Grass Seed. JAMES M. KIRK, 1520 Main Street, Wheeling, W. Va.

USE THE GATE CITY

STONE FILTER. The great danger from drinking impure water is the presence of virus organisms of a very low order. These are absolutely unable to pass through the stone. Careful microscopic examination of the stone after it has been used and then broken shows that all matter is excluded and goes so far from the filter that it makes you feel better.

GRAND BALL

Will be given by the Butchers' Protective Association. AT THE ARION HALL, WEDNESDAY, April 13, 1887.

GASOLINE!

For House Illuminations, to be used in Gas Machines, of full 32 degrees gravity, deodorized and very volatile.

A POSITIVE

One box will cure the most obstinate case in four days or less. Allan's Soluble Medicated Bougies.

A POSITIVE

One box will cure the most obstinate case in four days or less. Allan's Soluble Medicated Bougies.

AUCTION SALE OF VALUABLE

ISLAND LOTS. The undersigned will sell at public auction at the front door of Ohio County Court House, on Saturday, the 21st day of April, 1887, commencing at 10 o'clock A.M., the following desirable lots, viz: Lots Nos. 66, 67 and 72 on Broadway.

WHITE ROSE

BAKING POWDER. I will from this date give with each Case of Fifty-one Pound Cans, a handsome heavy filled

GOLD WATCH!

Stem Winder,
