Everybody is talking now about curing hams, and many and varied are the recipes given, all said to be infallible. The following is good enough: Allow your hams to lie in salt four to six weeks according to size; take out of the brine and dry in the air a day or two; rub each ham thoroughly with ground black pepper and sorghum, wrap in paper (and enclose in cloth sacks if liked) and hang in a cool dark place.

Spot on the Sun. Have you seen the big spot on the sun? Here's the latest in regard to the phenomenon: "A peculiar haziness of the atmosphere in St. Louis last Friday made it possible for observers to see the new and big spot on the sun with the naked eye. Prof. H. S. Pritchett, of Washington University, measured the spot, and said it was 27,040 miles long and 9,500 miles wide. The next largest one is 9,100 miles long and 4,070 miles wide, and there is quite a flock of others, from 500 to 1,000 miles in diameter, strung along like a sort of tail to the big one. The entire disturbed area is about 68,000 miles long and 40,000 miles wide. The main spot, it will be noted, would cover just three worlds the size of ours." Here at Edgefield we can see this spot through a smoked glass.

School Funds.

School Commissioner Nicholson requests us to say that the delay in making and publishing the school fund apportionment for Edgefield county is due to the fact that he has not as yet been able to get the data for such apportionment from the various sources, but that it will be given as soon as he can get the necessary information, perhaps next week.

To Plant Tobacco.

Mr. Abe Broadwater has just secured the fine tobacco seed he has been hunting so long. They are imported from Cuba, and have to be soaked in honey, maple syrup and Jersey cream before they will germinate. New Firms.

The firm of Ramsay & Bland, hitherto doing business at Edgefield and Johnston, has been dissolved by mutual consent. The business will be continued at Edgefield by W. W. Ramsay and B. B. A Guano Problem.

B. has three tons of fertilizers. One contains 8 per cent of ammonia; another 12 per cent of potash; another 12 per cent of acid. He wishes to mix from these three tons a ton to contain 2 per cent of ammonia, 3 per cent of potash and 8 per cent of acid. How many pounds must he take from each of the three tons to make the desired formula? Guano agents and school teachers are invited to work out this problem for the sake of a sorely distressed farmer.

Accident at McCormick.

Mr. G. E. Cade, living near McCormick in Abbeville county, was accidentally killed on Saturday night last. He was found dead and it is supposed his horse ran away with the buggy, threw him out and killed him. But as he was a wealthy man and had constantly money on his person, some think he was killed and robbed. He was caught between the shafts and wheels and dragged several hundred yards. When found life was extinct.

Cut This Out.

The Scientific American gives this receipt, which the whole world ought to know: "At the first indication of diphtheria in the throat of a child make the room close, then take a tin cup and pour into it a quantity of tar and turpentine, equal parts. Then hold the cup over a fire, so as to fill the room with fumes. The little patient on inhaling the fumes will cough up and spit out all the membranous matter, and the diphtheria will pass off. The fumes of the tar and turpentine loosen the matter in the throat and thus afford the relief that has baffled the skill of physicians."

Eclipses of the Sun.

During the present year there will be two eclipses of the sun visible in the Southern and Eastern States.

The first of these solar phenomenon will occur on the first day of February next. It will be what is known as a ring or annular eclipse, which means that the moon will pass across the sun's disk in such a way as to leave only a rim of light visible. It will last for only a short time, however, and the sun's illumination will not be very seriously menaced.

The second eclipse, which will be of the same nature, is slated for July 29th. It will be visible in North and South America, and also on the Atlantic coast. Instead of lasting for only a few minutes, however, like its predecessor, it will last for something like two and a half hours.

Must be So.

A few years ago Mr. Henry Cheatnam, of Edgefield county, attracted by the advantages afforded by a residence in Richmond county, moved here and bought the property known as the Perrin place, about two miles from Augusta. He has since then never had occasion to regret his step, for his removal was a well-timed one. He now has a Jersey herd unsurpassed by any of this section, a farm cultivated to the highest yield, and is enjoying good health, having had no sickness since his removal. There are three causes for this very happy state of affairs with this very clever gentleman. The first is his energy, the second the unsurpassed advantages of the section in which he so fortunately chanced a residence.—Augusta Herald.
