Co'd weather came on us very suddenly last Saturday. The wind blew hard all day from the West, and the thermometer kept going down all day, and for two or three days the thermometer fell so low that the wind ceased blowing about night. The next morning the thermometer was 40 degrees below zero. If this cold spell continues it will damage the cotton considerably. It will lounge, puffy, big slick looking stuff that would not sell for much. Rust and blight seem to hold full sway on the wheat.
