NEVS SUMMARY.

-Cotton closed dull in Liverpool on Saturdayat 13dd. for uplands. -In New York cotton was a shade firmer: middlings 812 350.

-Gold closed at 344. -Colonel R. J. Moses, of Columbus, Ga., has received a small number of coolies, who may be seen working on his farm near that city.

-The drought in Maryland is almost as bad as in Virginia, and is moreover general. It is feared that not half a crop of corn or potatoes will be raised if it continues.

The Levabt Herald reports that two Armenian, prelates who had been detained three years in Abysainia, have been released through

the intercession of the British government. - kt the Women's Suffrage Association in New York, Mrs. Fosborg stated she had with considerable difficulty obtained seventy-five aignatures to the petition for a sixteenth ndment, giving woman the vote. Not more than twenty of them were obtained from

-The Richmond Enquirer of Wednesday says: "A statement has appeared in the ne vepapers that Mr. Peabody has given to Wash-ington College \$60,000. This is a mistake. Mr. Peabody has a claim against the State of Virginia for about \$50,000, and he has given

that claim to Washington College.

A New York journs: says: "The effect of Mrs. Stowe's revelations concerning Lord By ron is beginning to be felt in a largely increased demand for his reasons. emand for his poems, and close observers say the demand comes mainly from a class o persons that never read them before. One leading bookseller reports a heavy increase of his sales, and other houses in the same line are anticipating a like harvest. New and obeap editions of Byron for the million, it is

expected, will soon be announced as in press."

—The English dispatch, by way of Honglingame treaty with the United states by the Chinese Government, published lately, is not believed in Washington. It is evidently made up in the interests of the English merchants at the treaty ports, who have all along been bitterly hostile to the new policy represented by the Burlingame Embassy. Every one of the English papers printed at Shanghai, Hong-Kong, and other ports, have been system tio in its do aunciation. The whole dispatch isregarded as a weak invention of the enemies of

China or of the United States.

—The New York correspondent of the Philadelphia Republic says: "Twenty-five Colestials from California arrived here yesterday, to be thing was accomplished very quietly, lest the employed as watters in the city hotels. Mildsian gentlemos employed at these estab-lishments should make a noise about it. There is nothing of the 'coolie' about these strangers, nor do they belong to what the Californians call the riff-raff. This first instalment of the coming flood was not brought here by Sing-Man nor Koopmanschaap, nor any other whole sale contractor, but by the proprietor of a prominent intelligence office in Broadway. The ir wages are \$7 per month, with board, the first year; \$10 the second year, with a promise of better terms from that time forward- if the ar rangement is mutually agreeable.

-Some weeks ago, an informal meeting o the colored mechanics of Washington was hold for the purpose of beginning he organization of a National Colored Men's Trades Union. mittees were selected and letters sent all meeting and asking co-operation. On Friday, a person futerested in the matter received fetter from the president of a colored men's trades union in Macon, Ga., saying that they were fully organized and willing to aid their brethren here. The writer says the colored mechanics are well organized for protection throughout the State, but they find it impossible to secure justice from the white population, and that a convention of colored mechanise is called to meet in Macon, in October, to devise means for emigration to the Northwestern States and Territories. A committee has been appointed to visit the Northern cities for the purpose of securing some competent persons to interest themselves in the matter, and aid the colored people of Georgia to migrate West

-The New York correspondent of the Philadelphia Ledger writes: "Gentlemen who protess to represent the interest of the Cuban Junta in this city profess to be very jobilant about some news, which they profess to have just received. What it is 19 a scoret they keep to themselves; but they condescend to assure us that things have now taken such a turn diplomatically as to leave no doubt that by Chtistmas next the ever-faithful isle will be its own master, and free from the domination of the detested Dons. All this, now, is rather Delphio: but some of the long-headed genery in Wall-street interpret it as an indication that there must be something in the cable rumors about a treaty at Madrid for the cession of the island to the United States. They think it quite ikely, moreover, that the Cabans here may be in receipt, per cable, of important intelligence that nobody else has, inasmuch as Mr. Sickles known to be on mtimite ferms with some of them. In any event, at the next Cabinet meeting at Washington the expediation is that the country will be treated to a first class sen-

A terrible tragedy occurred in Philadelphia, ou' Tuesday morning, near the scene of the I witchell murder. The family of hir. Thomas Li Evans assembled at breakfast at the usual Hour, and during the progress of the meal the strange behavior of a son, named Marshall Evans, was freely discussed. It had been determined that the father, after by k. fast, should visit the family physician, Dr. Van Dyke. To order to product a certificate of the son's mental condition, on which he could be rem ved to an insane asy,um, Just as the conversation was concluded starshall came into the breakfast-room and took his seat at the table. His father bade him good morning but he made no reply to this salutation, and it was uspected by all present that he had over-beard the conversation. He ste heartily, and while he was thus engaged his father left the

down the front stairway. On his father reaching the hall landing, Marshall walked toward the front door, drew a revolver and shot at his father three times in rapid succession. Mr. Evans retreated through the parlors and fell near the dining room. His son followed, and as the body was lying on the floor he bent over it, but said nothing, and when the police entered the last words of the dying man were "Don't harm my boy, for he didn't know what he was doing." Young Evans is twenty-six years old, has been afflicted with rhoumatism violent manner to his wife and members of his own family. He was, without doubt, insane, for he has been, until a few weeks, good son and an affectionate husband.

CHARLESTON.

MONDAY MORNING, AUGUST 89, 1869.

The News Price Current.

On Wednesday next, September 1, we will publish THE NEWS Price Current, containing c usual full and accurate review of the markets for the commercial year closing on the 31st instant. Orders for extra copies, with or without cards, must be left at THE NEWS office by Tuesday evening.

Deep Water. The Committee of the Chamber of Com-

merce, to whom was referred the subject of examining the Beach or Sullivan's Island Channel, report that the greater part of the channel shows a mean low water depth of ver thirteen feet, and that with some little drodging this channel can easily be made the safest and shortest entrance and outlet to the port of Charleston. The committee ecommend that application be made to the Treasury Department to have a survey made, and an estimate taken of the expense of dredging the channel and of removing the wrecks which lie in it, so that Congress may e memoralized for an appropriation to cover the whole expense. Such a memorial. supported as it would be by the whole late, would doubtless be successful, but, as the memorial cannot be presented until the cost of the work to be done is ascertained. it seems to us that it would be better to apply to City Council to have the necessary surveys made at once, at the expense of the city. Red tape in the departments would cause a long delay, and Congress might have adjourned before the survey was com pleted. It, however, the work be put in hand at once by the city, we shall within a short time know what it will cost to obtain and maintain a depth of twenty feet at high water in the Beach Channel. And, in this connection, it has suggested itself to us that it will not be well to confine the survey to one channel only. The greatest depth of water expected to be obtained in the Beach Channel is about twenty feet. This must do, if we cannot do better; but it seems to us that the Main Ship Channel, also, should be carefully surveyed for the purpose of ascertaining whether we cannot have at that point as much as twenty five feet of water. At the same time, detailed information might be obtained from Europe concerning the characteristic of the despending work done in English ports, a work to which deepening our channel to twenty live feet would be a bagatelle. In this way we should be dealing with hard facts, and should have before us the records of what others have done under circum stances more embarrassing than our own We have not been able, so far, to give this mportant subject all the attention it merits out, it appears to us, the wisest course is to begin the survey without detay, to have both the Main Ship Channel and the Beach Channel surveyed, and to obtain from Eu rope all the information in regard to similar undertakings which is in any way acces sible. The expense will not be great, and if we venture nothing we cannot win the

high prizes in the mighty game of commerce A New Material for Paper.

Some very interesting experiments have been in progress at the Cickassabogue Paper Mills, near Mobile, as we learn from the Mobile Register, under the direct su pervision of Dr J B Read, of Tuscaloosa, well known as the inventor of the Reed Shell which has rendered the Parrett gun so effective an engine of destruction in warfare. Several years since, when the cost and scarcity of rags rendered it important to discover some material which might be substituted in whole or in part for rags was the subject of much thought and investigation, the idea occurred to this gentleman that the okra plant, belonging to the family of the cotton plant, and containing good deal of excellent fibre, might be advantageously used in the manufacture of paper. With him, to think was to got, and he at once commenced a series of experiments with a view to subject the theory to a practical test. Obtaining a small boller, capable of bearing a considerable steam pressure, and gathering a few stalks as they were left in his garden, he'o mmenced his work with the patience, labor and perseverance which seem to belong in a high degree to inventors, and are essential to their success.

The experiments thus far made demonstrated the fact that good brown paper could be made of okra; but it remained to show that this material could be bleached to sufficient whiteness to make it available for printing or book papers, and if so, at what cost in comparison with rag or other material To decide by soruel test, tois important question was the object of the investigation at the Chickassabogue Mills to which we have referred. The experiideners in the South within reasonable distances of paper mills. To the opinion of the experienced paper makers who watched the progress of the work from the outsing of the dry stalks of okrs to the production of paper from the machine, the following points may be regarded as established

1 Okra requires but little handling to room to change his dressing your for a cost; prepare for boiling, is readily passed of Arthuring what, charleston, a. C. and procuring his hat, Mr. Evans started through the cutter, needs no sorting, and October 35

the entire plant is available from the root to the pod.

2 It is easily boiled, if well cured, requires only time to reduce it, and may be washed and beaten ready for the machine in about half the time required for preparing rag stock, thus largely increasing the productive capacity of the mill without additional machinery.

3. When properly boiled it yields readily to the action of chemicals and can be bleached at no greater expense than ordinary

4. The pulp works as freely and smoothly on the machine as any other fibre-does not stick to metallic press rolls like straw and wood, even when working pure okra pulp, dries readily, and can be run safely at the highest speed of the machine.

5. The paper made here from it is very strong, tough and elastic-better in these respects, when made entirely of okra, than either straw or wood pulp when mixed with fity por cent or more with rags. It has none of the brittleness and hardness so obectionable in straw papers, and may be ubjected to strong friction by rubbing between the thumh and fingers, or between the hands, and will open out smoothly and soft as a glove.

6. It will make an excellent substitute to mix with other fibres in the beating engines, and is of itself a superior hand stock.

7. Whether worked pure or mixed with rags it makes a paper entirely free from the objection justly raised by the printer against straw and wood papers.

8. It makes an excellent stock for fine wrapping paper, and imitation Manilla paper, and even in its raw state, without boiling or bleaching, makes a strong article of common wrapping paper, suitable for grocers and hardware use superier to any paper made of straw.

The grand result will be the cheapening of paper to consumers, and it ought to be the transfer of paper manufacturing mainly to the South, where this fibre is so readily and cheaply grown.

We may add that the Chicksssabogue Paper Mills, near Mobile, are now advertis ing for okra stalks, and will purchase 1200 tons of that material if it can be furnished.

Heriews.

THE MAN WHO LAUGES. (Complete) By Victor Hugo. New York: D. Appleton & Co. Charleston: John Buesell.

Those who have not had the courage to read the latest work of Victor Hugo in the pages of Appleton's Magazine, may now attack it in complete form with a better prospect of amusement and edification. The Man Who Laughs is a wonderful work in more senses than one, but it has power and force, whatever its occasional buffconery and broad brutality-and will be universally read. The suthor says in his preface : Takrue title of this book might have been Aristocracy. Another book which will follow may be entitled Monarchy. And these "two books-if it is permitted to the author "to complete this labor-will precede and "1-ad to another, which will be called Ninety Three." So there is more to come.

The complete copy of "The Man Who APPLETON'S JOURNAL. New York: D. Appleton

Toe monthly issue for August includes, the four numbers of the Journal published that month, with an index for the first volume, toat closed with the twentieth number. The volumes will be completed semi-annually hereafter. The distinctive feature of the fournal is its union of fiction, science. literature and illustrations, without discarding a certain amount of news. The first volume shows that it will be sustained. The papers that are given are of a high degree of merit, whichever department they fill, and it is not too much to say, perhaps, that the Journal is discharging an important function in raising the standard of our rent literature and absolute knowledge in a large circle of society. It deserves suppor quite as much as any literary undertaking. and principally because it gives a solid re turn for a solid outlay.

THE suggestions of the Chamber of Commerce in regard to the manner of licens. ing pilots will, we hope, receive some atention at the hands of Governor Scott. The old system worked perfectly well, and the new system works infamously. It is hard to see that there is any political question wrapped up in this pilotage matter, and we trust that Governor Scott will recommend the repeal of the obnoxious act, and that the Legislature will have sense enough to adopt he recommendation

THE Lancaster Ledger says: "The friends of the South Carolina Central Railroad will bear in mind, that the road when constructed from Gourdin's depot on the Northeastern Boad, through Williamsburg, Clarendon, Sumter, Kershaw, Laucaster and Mecklenburg Counties to Obsrictte, will afford a route from Charlotte to Charleston shorter than any other froad by sixty-five miles. This will, undoubtedly, be the best paying road in

WE learn tost the railroad bridge across the two branches of the Cape Fair is completed The bridge was begun two years ago, and is said to be equal to any work of the kind in the United States. Passengers will now crospe the ferry at Wilmington, which has slways been one of the ugly features of a trip North by the sea-coast

route. Os THE Abbeville circuit the juries, in all bases brought on auto war debrs, have given verdicts for one-balf the principal and inerest to January 1, 1861 In cases of Confederate debts, the rule furnished by the ast of 1869 has been applied, except in bases of peculiar hardship.
