

A LITTLE OLD LADY. A Grandmother Aboard the Train - Her old Eyes Full of Child-Like Wonder.

We step at a quiet countryside the has recently been a station - for only one other building is visible - and a little old grandmother comes among us. A farm wagon is at a respectful distance with a careful man holding the bits of the fat and sleepy old horse, who do not even dream of being frightened. The little old lady calls out something to the distant old man who smiles in the doubtful way of one who does not understand a word, and she would like to linger on the platform...

Local News. From the Daily Thursday

Rumor has it that there are five marriages on the tapis for the coming week. Messrs. E. L. Bonner & Co. are occupying their new store - the handsome building in Montana. Another patient named Thomas, was sent to the Insane Asylum at Warm Springs, day before yesterday.

ROMANCE FROM WASHINGTON. A Strange Story of the Pope's Contribution to the National Monument.

A saloon keeper of this city, who claims to have been a Know-Nothing in 1854, has divulged a secret which has been rigidly kept for nearly thirty years. In 1854 most of the States and some of the foreign countries contributed to the Washington monument. The one sent by the Pope of Rome is said to be the bottom of the Potomac. The name of the man who carried it there is thus told how the deed was done: Between the hours of 11 and 12 o'clock, March 5, 1854, we went to the monument. It was blacked in the face and detailed to look after the watchman in the box. One of the men went up to the box, reading by a lamp, he rammied his pistol in the hole and told him to keep his hands off the monument. The man then came down and secured the box. The man with the pistol stayed there until our return. The other one helped to load the stone on the cart. It was boxed up with three slats on each side. It was about four feet by one foot six inches in size, of a peculiar kind of white marble, and was inscribed with a Latin inscription in gilt letters upon it. With some skids, bars and blocks which we found on the way, we rolled it up to the monument. After some little trouble we got it safely on board and started it down the basin into the river and down the Washington channel. The monument is now in the Long Bridge draw. While on the way down we broke off part of the slats and chipped a piece off one of the stone. The stone has two bricks, with a sledge hammer, each taking a small piece. When we got near the bridge a confederate gave us the signal to stop. We were then ordered to get down from the bridge. We then ascended the side of the stone and away it went with a crash. It descended a young lady, who was standing guard over the monument, and she was discovered in different directions for our homes. That is the true story of the whole affair. A search of the records of the monument society fails to reveal any description of the "Pope's stone." All the others contributed are represented by facsimiles in the archives of the monument society. This peculiar piece had not been fully recorded, as the case in which it was received had not been removed at the time it was reported. But the stone was discovered the watchman was dismissed and a reward of \$500 was offered for the detection of the person called. But the stone has no name and nothing ever came of their efforts, and nothing has ever been heard of the matter until the saloon keeper spoke yesterday. - N. Y. Sun.

FRANCE AND DE LESSEPS. Reasons Why the Great Engineer is Not Adored by His Countrymen.

France is prepared to feel in regard to Suez pretty much as M. de Lesseps feels. The peremptory summons of the engineers of the company at Suez to bring their plans for the new canal to Paris once for all, to show that, with or without us, M. de Lesseps will go on with the work. De Lesseps is fighting us just now but there is nothing to prevent us from saying how well he fits. It is the jaunty courage of his great air, Palmerston, set off with French fineness, that in every part of the field-to-day in Paris, yesterday at Ismailia and to-morrow in London. At one moment it is a need for Suez, at another it is a need for Panama. He is a sort of engineer of public confidence and holds himself free to fly everywhere to avert a bursting of the banks. Panama is just as much on his mind as Suez, though we forget it is not so much on ours. As a matter of fact, he had only just reached the United States by giving the bulk of his Panama contracts to Americans before the British broke out. Yet he has nothing more to say for either side. He promises a new canal by 1888. He seems to have some superstitious reverence for this date, as though it were the day of his greatness and make him like Victor Hugo, immortal before his time. The truth is, opposition has nothing new to say to him. He is no bluffer experience of it has enabled him to formulate all its terrors. As it was at Suez, he will tell you, so it is at Panama, and so it will be at Suez again. It is a fever that runs its course by stages. There is the political flush, and then the technical flush and then the combine to avert a bursting of the banks, and then the crisis; and, that over the worst is past. In the first stages Panama was a danger to the interests of America, just as Suez was a danger to the interests of England; in the second it was an impossibility - again, in the same way. The firm rock was the obstacle in the one, just as it was in the other. M. de Lesseps partly-reasoned, partly lived with this wonderful confidence was all of his life. He is not pre-eminently an engineer in the professional sense of the term - there are half a dozen men in the world who are either engineers or who would leave him nowhere in a technical examination, but as the negotiator, the diplomatist, the general of his schemes he stands apart.
