"I COME, THE HERALD OF A NOISY WORLD, THE NEWS OF ALL NATIONS LUMBERING AT MY BACK"

THE PINE

Alone without a friend or foe,
Upon the rugged cliff I stand;
And see the world below expand.

THE PLATFORM

The following is the platform and resolutions adopted by the Democratic State Convention which met in Springfield, on Thursday, April 11th.
The Democracy of the State of Illinois, assembled in convention, congratulate the country on the final settlement of questions resulting from the late civil war upon principles of local self-government so long withheld by the tyrannical and despotic rule of the Federal Government...

LABOR AND MIND

May we not indeed say that labor is the creator of mind itself—that brilliant, glowing mind that penetrates the mysteries of nature, talking with the flowers in its own eloquent language; with the stars that speak in silent laughter; with the winds that whisper and scream through the forest and over the plains; with the ocean whose deep voices has echoed through all the centuries and fills the dome of heaven with proclamation of the majesty of God, and with the snowflakes that float in the air like the snowflakes of the spirit; that mind which harnesses the lightning upon the wire and sent them dancing with their burden of intelligence through the air; that mind which has taught the peon to move the piston rod in its way to liberty, and that has kindled the world's fire, and reflected on its own strong and mighty intellect. What hours and days and centuries of toil are represented in these grand achievements! What countless myriads of bodies have been worn out and borne to the charnel-house in the process of developing the mind that might hear the voice of God in the song of the water and the wind and the lightning, and riding upon the lightning that it might open the book of nature, and as it turned its pages, to read their meaning and to appreciate their beauty. It is the poor tired body that has borne mind into the dark places and held it there, while the eyelids drooped, until it blazed with sufficient brilliancy to melt the night into morning; Galileo, and Newton, and Plato, and Newton, and Columbus, and every man whose mind has been a lamp to the world, were weary toilers, whose limbs begged for sleep while the developing intellect denied. Franklin followed the best of the mind that grew at the cost of his life, until worn out with toil, the body laid down in its cold shadow of an ice-mountain and slept a sleep that knows no awakening. Kane came tottering home to the old chuchyard, and the tired laborer told the mind that he could support it no longer and he went beneath the turf and flowers to rest. Livingston marched through the jungles and cheerless forests of uninviting Africa to find the growing appetite of mind, until the limbs were unable to go farther, and they stretched themselves beneath a burning sun in death. Thus the soul dies from zone to zone and from world to world, sipping the sweets of wisdom, as the bee sucks honey from the flower, listening to the silent eloquence of the fragrant garden, reaching the blossoms of the leaf on the tree; studying the nature of the zephyr which softly kisses the earth, and of the hurricane which howls its rage through forest and city, but it drags the body after it and feeds upon its vitality and its industry.

LABOR AND MIND

Benjamin Franklin was an indefatigable worker. Eli Whitney toiled harder than a stoker on the steamship; Robert Fulton knew what a physical sacrifice a growing and investigating mind demanded; James Watt was familiar with the flickering light of the lamp burning at midnight; and yet, forgetting all this, the frail but-terflies of fashion and the light weights in intellect, think it becoming to assume superiority over the millions who are toiling to make the world beautiful and grand. A strong, rough hand, clearing a pathway through the rocks, or planting the rose in the desert, and uncovering the mysteries of nature for the study and improvements of the mind, is better than a white kid glove or the hand that it covers, if that hand is too delicate for exposure to the sun or to touch a needle or a plow handle. The young lady whose time is devoted to her wardrobe and the renovation of the fading color of her cheeks by the use of a rabbit's foot and a paint-pot, will never be a Downing, a Sands or a Nightingale. The young man who bases his claim to recognition upon the fit of his pantaloons will

LABOR AND MIND

be forgotten when he has no further use for trousers. The one difference between such a youth and the dress figure in front of a tailor shop is that he possesses the power of locomotion—both are used for the same—the exhibition of the tailor's art. The difference in brains is too trifling for consideration. If labor does not create brains, it seeds the products of nature until its growth assumes such sublime proportions that it is a mighty flame which has been kindled from a spark, and which glows with the splendor of a sunburst on the skies of midnight.—Western Rural.
