**WEATHER CROP BULLETIN.**  
Though some high temperatures were registered during the last four days, the mean temperature of the past week was a little below the normal for the latter half of July. In the forepart of the week there was considerable cloudiness, with local showers of variable amounts. The average rainfall was much below the normal, the larger measurements being reported from portions of the northern section. As yet, however, the crops show no signs of suffering from effects of dry weather. Corn has made rapid growth, and on the average the crop is more promising than on the corresponding date in any previous year since 1900. Good progress has been made in haying and harvesting oats and barley, and the quality of both hay and grain is reported to be better than the average of recent years. Pastures are fair, and all the minor crops are doing notably well.
