The notorious Bert Keltz of Webster City was in town today in the interests of Frank P. Woods for congress. If Woods wishes to stir up any enthusiasm for himself in the district he should send out a better representative than Mr. Keltz.

When After Long and Hard Service, You've Found More than your Money's Worth of Wear in your First pair of Copeland & Ryder's Shoes, cut them open

That will show you why they wear so long and so well. When you rip through the arch you will find the stoutest leather, reinforced by a spring-steel arch support. This springy, yielding strength of the arch keeps the shoe always shapely. Because there's where the strain comes. And if the arch wasn't substantial and flexible, the shoe would "turn up at the toe" and otherwise become shapeless. And if the arch don't thus give springy, comfortable SUPPORT the foot would TIRE. Then when you cut through the BALL of the sole, you find that sturdy sole leather made from thick STOUT hides, oak tanned and thoroughly seasoned--TOUGH pliable leather that bends comfortably with the foot instead of "cracking" as do stiff soles. And you find inside evidence of SUPERIOR WORKMANSHIP--in the careful competent joining of uppers to sole--in the well sewed seams--in every detail. Then when you split open the top, the BOX of the toe, you find a FULL VAMP, an all leather vamp, which insures PERMANENT toe form--and toe comfort, because it never "caves in." Whenever you cut into a Copeland & Ryder shoe you find full evidence of thorough merit--MATERIAL of high grade and WORKMANSHIP of the highest order. That's WHY these shoes are so LASTING; why they remain SHAPELY throughout their long service. And they have style worth of their long-wearing quality--comfortable from the first, stylish to the finish.
