SAVE WINTER WHEAT SEED.

Iowa State college extension men urge upon the farmers the necessity of saving their winter wheat for seed, in order to make possible the sowing of Iowa's one million acres this fall.

Threshing has started in many sections of the state and many farmers will be tempted to throw their wheat on the market immediately. They are advised not to do this in order that they may meet the seed demands for this fall. It is very probable that a premium will be paid for good seed wheat which will make a profit for the farmers who hold their grain.

Farm crops men believe that fall wheat is much safer than spring wheat in all but some of the northern counties of the state. Winter wheat divides the labor both at harvesting and seeding times, an important factor at the present time. It also produces better yields and is a good nurse crop for clover.

VEGETABLE SEED CROP PROMISING

A majority of the growing vegetable seed crops are in good condition, according to reports just received from many large growers in the United States by the seed reporting service of the bureau of markets. Growers in the east and middle west

almost uniformly reported on June 28th good growing conditions. Some failures have been reported for some crops in certain sections, particularly California and the Pacific northwest where hot weather during June damaged many crops severely. Crops growing in the river districts of California have suffered the least from drought and the prospects in these sections are that fair to normal seed crops will be harvested. Hot weather in the spring in the western section will result in damage ranging from "slight damage" to 15 per cent, according to local conditions.

WHAT CATARRH IS

Science has shown that nasal catarrh often indicates a general weakness of the body and local treatments in the form of snuffs and vapors only irritate and do little if any good.

To correct catarrh you should treat its cause by enriching your blood with the oil-food in Scott's Emulsion which is a medicinal food and a building tonic, free from any harmful drugs. It is helping thousands. Try it. Scott & Bowne, Bloomfield, N.J.

Packers' Profits - Large or Small

Packers' profits look big—when the Federal Trade Commission reports that four of them earned \$140,000,000 during the three war years.

Packers' profits look small—When it is explained that this profit was earned on total sales of over four and a half billion dollars—only about three cents on each dollar of sales.

This is the relation between profits and sales:

Sales █

If no packer profits had been earned, you could have bought your meat at only a fraction of a cent per pound cheaper?

Packers' profits on meats and animal products have been limited by the Food Administration, since November 1, 1917.
