Fight Cabbage Worms Now. Now is the time to combat next summer's cabbage worms, say the entomologists at the Iowa agricultural experiment station. If there are any old cabbage stumps still in the garden, the chances are that they are harboring cabbage worms in the dormant stage. To get rid of them, all that is necessary is to destroy the leaves, stems and everything that remains of the old cabbage in the garden. There is still time to rid the garden of many another pest by cleaning up and destroying the dead rubbish of last summer.
