

# ROOSEVELT FOR FEDERAL CONTROL

## Believes Government Should Generally Be Leader in Conservation.

### AD EXPERIENCE IN EAST

Addressing Public Meeting in Denver, Ex-President Discussed Water Power, Coal Lands, Ranges and Forests—Presents Plan for Conservation.

Denver, Colo., Aug. 29.—Colonel Roosevelt arrived in Denver from Cheyenne this morning, and after a parade in which representatives of the state and city, the Live Stock association and the great number of the Spanish War veterans, the Veterans' look part, was the guest of the Denver Press club at a cowboy luncheon at Overland park. In the afternoon he delivered a public address at the Auditorium and later spoke to the Spanish War veterans at the Hotel. He was the guest of honor at a "round-up" dinner at Elbejel Temple.

Mr. Roosevelt's main address was on conservation, and was as follows: This country has shown definite signs of waking up to the importance of handling its natural resources with foresight and common sense. The conservation question has three sides. In the first place, the needless waste of the natural resources must be stopped. In the second place, the natural resources must be developed in a way that will be of benefit to the people. In the third place, the natural resources must be conserved for the benefit of future generations.

Mr. Roosevelt's main address was on conservation, and was as follows: This country has shown definite signs of waking up to the importance of handling its natural resources with foresight and common sense. The conservation question has three sides. In the first place, the needless waste of the natural resources must be stopped. In the second place, the natural resources must be developed in a way that will be of benefit to the people. In the third place, the natural resources must be conserved for the benefit of future generations.

and the water, and that it falls to attempt this duty at the earliest possible moment. It is not to be allowed to take up the work, which because it is done by amateurs freely well done as if it had been begun earlier.

Water Power. The control of the water power sites. The enormous importance of water power sites to the future industrial development of this country has only been realized within a very few years. Unfortunately, the realization has come too late to secure the vast majority of power sites; but many yet remain which our hands are free to deal. We should make our duty clear hereafter: after the power sites are kept under the control of the general government, for the people, and not for private interests. The fee should remain with the people as a whole, while the use is leased on terms which shall secure an ample reward to the lessee, which shall encourage the development and use of the water power, but which shall not create a permanent monopoly or permit the development to be anti-public, to be in any respect hostile to the public interest, to be a hindrance to the power to do this effectively, and it is for this reason that you will find these corporations which wish to gain an undue advantage and to be freed from efficient control on the part of the public, doing all that is possible to secure the substitution of state for National action.

The National action. The National action is something fairly common in the appeal made by many of the men in favor of state control when you realize the great importance of seeking the privileges of developing the water power in any given state at least as apt to be secured by the National action. In this country, nowadays, capital has a National and not a state use. The great majority of the water power sites are largely owned in the older states where these which are most in evidence in developing the water power sites are the powers and forests of the west territories and the new states, from Alaska to Arizona. I have been generally anxious to ring the past two months at having arguments presented to me on behalf of other men from New York and other states, for instance, as to why Colorado and other Rocky Mountain states should manage their own water power sites. I believe that the National action is a better one than the state action, and that the National action is a better one than the state action, and that the National action is a better one than the state action.

handicap or exclude the small man by requiring him to spend more money for fences than he can afford, and must leave every acre that can be set by bona-fide homesteaders freely open to such settlement.

It does not believe that a single acre of our public lands should hereafter pass into private ownership except for the single purpose of homestead settlement. In the grading of eggs it is laid down as a first requirement that they must all be shipped new laid. A new laid egg is an egg that is not over five days old when shipped, an egg that has been gathered promptly and kept in a moderately dry, cool place (under 60 degrees), free from foul odors and other contaminating influences. On holding a new laid egg to the light it will be seen that the air space in the large end is very small and the yolk almost invisible. As the egg continues to age the air space enlarges and the yolk becomes visible as shown in the illustration. Rough shelled and abnormal eggs should never be shipped. Through some markets may pass several grades of eggs as a general rule there is no necessity for many grades. What the best trade demands is freshness, grading, uniformity in packing and regularity in supply.

For ordinary purposes two grades of eggs will be found sufficient to satisfy the demands made on the producer, viz: New laid selects and No. 1. Another grade of common stock may for a time be marketed, but they must not be sold under the brand of the association.

New Laid Selects.—These are to consist of strictly new laid eggs, not over five days old, weighing not less than twenty-four ounces to the dozen.

Food for Fowls. The natural grain feed of fowls is hard and they should be fed hard grain when in confinement.

Important to Mothers. Examine carefully every bottle of CASTORIA, a safe and sure remedy for infants and children, and see that it bears the Signature of *Dr. J. C. Watson*. The Kind You Have Always Bought.

Dr. Pierce's Pellets, small, sugar-coated, easy to take as candy, regulate the bowels, cure constipation, liver and bowels. Do not grip.

# POULTRY

## CANADIAN GRADING OF EGGS

The above sketch illustrates a practical chick fountain which can easily be made from a tin can and an earthen or tin dish.

Five-eighths of an inch from the bottom fill with water and place a dish over same. Diameter of dish must be about two inches larger than diameter of can.

Turn the can and dish over quickly and set where desired. The advantage of this simple arrangement is that the water will not stand in the water and foul it, neither can they turn it over, and the dish is automatically filled from the can as fast as the chicks drink it.

Method Adopted at Maine Station and Gives Much Satisfaction—Cooops Are Used.

At the Maine station the following ration for fattening is fed to fowls in small coops.

French and English fatteners who make a specialty of the business of fattening thousands of chickens each year confine them in small coops. The coops used at the Maine station had a floor space of 14 by 22 inches, in each of which four chickens were placed. This method can be used when the space is limited. At the Maine station it was found that chickens fattened in a pen put on weight rapidly and at a low cost as those in crates or on which crumpling machines were used.

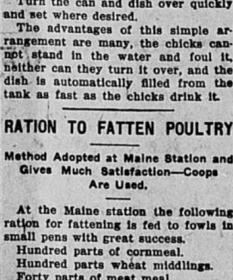

Where a pen is used the fowls should have shade, grit and the water must be fresh and plentiful. Feed them three times a day and be careful to see that none is left in the trough between meals.

The natural inheritance of all fowls is constitutional vigor, provided, of course, they are not entangled by injudicious breeding. Constitutional vigor can be maintained and brought out by choosing the strongest, healthiest and hardiest of the stock for breeders every spring and by killing out the weak and sickly ones in the fall. The introduction of fresh blood frequently not only keeps up the stamina, health and vigor of stock, but it also enables them to resist sickness and sudden changes of weather in the best way possible.

# HOME-MADE CHICK FOUNTAIN

Handy and Inexpensive Receptacle for Watering Little Ones—Many Advantages.

# JUST A NATURAL MISTAKE

Gussie, in Fancy Costume, Astonished the Doorkeeper for a Moment.

Gussie was knock-kneed, angular and round-shouldered. He had a terrible squint and a mouth like a steam roller. All the same, he reckoned on making something of a hit at the fancy dress ball, and his costume was as elegant as his figure was unlovely.

With fast-beating heart he stepped jauntily from his automobile outside the town hall, where the ball was being held. The hall porter stepped backward at the unsightly apparition.

"Great Christopher Columbus!" he gasped as he regarded Gussie.

"No, no, my good man!" chirped Gussie, as he tripped through the portals. "Chawles the First, my dear fellow—Chawles the First!"—London Answers.

# RECKONING DAY AND HOUR

Workman's Thoughts Not Altogether Fixed on What Might Be Called Higher Things.

Mayor William S. Jordan, at a Democratic banquet in Jacksonville, said of optimism in the United States:

"Let us cultivate optimism and hopefulness. There is nothing like it. The optimistic man can see a bright side to everything—everything."

"A misanthrope in a slum once laid his hand on a man's shoulder and said: "Friend, do you hear the solemn ticking of that clock? Tick-tack; tick-tack. And oh, my friend, do you know what day it inexorably and relentlessly brings near?"

"Yes, pay day, the other, an honest, optimistic workman, replied."

He Had No Eye for Color. There came to the home of a negro in Tennessee an addition to the family in the shape of triplets. The proud father hailed the first man who came along the road and asked him to see them. The man, who was an Irishman, seemed greatly interested in the infants as he looked them over, lying in a row before him.

"What does your think?" asked the parent.

"Wall"—pointing to the one in the middle—"I think I'll save that one."—Everybody's Magazine.

DR. MARTEL'S FEMALE PILLS. Seventeen Years the Standard. Prescribed and recommended for Women's Ailments. A scientifically prepared remedy of proven worth. The result from their use is quick and permanent. For sale at all Drug Stores.
