Do Your Dollars Fly up the Flue?

Coal costs money. You know it. The winter's coal costs BIG money. You know that also. Yet, half of it is, wasted by poor management. Oh, yes it is! Listen and be convinced.

Ordinary soft coal is half gas. An average ton of \$3.00 coal contains about 14,000 cubic feet of gas—common illuminating gas. A gas which will, if properly mixed with air, burn with an intensely hot blue flame. This gas represents the best half of your ton of coal.

This unburned gas and a large portion of the heat IS CARRIED UP THE CHIMNEY by the air leaking cracks in stoves of ORDINARY construction.

There is only one way to save this wasted gas and heat—and that is with a

Cole's Original Hot Blast Heater

which is so constructed that it has no air leaking cracks. In this wonderful heater and fuel-saver the gas is kept under perfect control until oxidized and burned.

It is the only stove that is made tight—holds tight—stays tight.

It is the only stove that saves the wasted chimney heat.

It's the only stove that gives you a constant, steady heat with soft coal, hard coal or lignite.

It will give you all the heat that is in your coal.

It will hold your fire 36 hours without attention.

It will burn all kinds of fuel.

It is guaranteed to consume one-third less fuel than any lower draft stove of the same size, using soft coal, lignite or slack.

AND—It is sold you under a guarantee to fill all these claims.

Back of this guarantee is the credit and capital of an immense factory and it is worth to you 100 cents on the dollar.

COME IN AND SEE IT. IT MEANS DOLLARS IN YOUR POCKET AND A PLEASED CUSTOMER FOR US.

HOLMES & GULBRANDSON, Hardware AUSTIN, MINN.

See the name "Cole's" on the feed door of each stove. None genuine without it
