The latest spring fish stories are of a unique order. One of them is to the effect that in the vicinity of a lumbering volcanic mountain in Canada, cooked fish are swimming around waiting for people to catch and eat them. The tramps would take in that region but for the fact that the fish must be caught, cleaned and salted before they can eat them, and even then the act of eating is accompanied by some muscular exertion. Another story is to the effect that near Wolf creek California, a tree was found by some wood-choppers, the other day, which bore as fruit, living fish of the mountain trout variety. Both of these stories are startling and might be considered untrue. But fish stories are generally startling, and are frequently considered untrue.—Kendall House Regulars.
