Eczeema is caused by an acid humor in the blood coming in contact with the skin and producing great redness and inflammation; little pustular eruptions form and discharge a thin, sticky fluid, which dries and scales sometimes the skin is hard, dry and fissured. Eczeema in any form is a tormenting, stubborn disease, and the itching and burning at times are almost unbearable; the itching burning humor seems to come out and set the skin on fire. Salvers, washes nor other external applications do any real good, for as long as the poison remains in the blood it will keep the skin irritated.
