as we tind them nom. The Grecin as we timd them now. The Grecinn and
Roman writers have tranumitted to us like names and cnuses. The Greeks ceill it rrusite, and the Romans rubigo. Ovid, describing the rubigalin, a religious festiVal established by one of the easliest rulers of Rome, makes tha priest sny, 'If
the sun fervently heats the moist staiks then, O dread gooddess, is the posportuap ty for thy dread wrath. Bo merpeiful, I pray, nod withbold thy rusting banda from the crops.' In all times, nad nmung

It was not until the miof the disese was knot too Irua nature of the disease was known. There is a species of plant which lives on the sap
of other plants, called parasite. The rust and smut are plants of this charneter..The mieroscype shows the fact that rual is a perfectly formed plant, having roots, stems and producing seed too small for
the unaided eyc to diveover. These exist io unsided eye to diveover. These exis in innumerable quantities in the atmos
