

SEWING MACHINES.
\$15 - SAVED - \$15
THE NEW
WILSON SEWING MACHINES
PRICE, FIFTY DOLLARS.
 THE IMPROVEMENTS MADE ON THE Wilson during the year 1871 have placed it at the head of all competition, and to-day it is without a rival. It is as durable as steel and iron can make it. Every Machine of the late case-pattern from is warranted five years, and a guarantee furnished with each Machine.
 The above cut represents the late improved Machine, which runs with the table and runs light and rapidly, and makes the shuttle or lock stitch, with a right needle, and the celebrated UNDER-THROAT improved in shape so as to have a portion of the feed on both sides of the needle.
 Remember the Fact, that high prices (on sewing machines) do not indicate superiority. The combination, the ring, and the mechanism, all agree on high prices, which they, sooner or later, will be forced to reduce on account of the unappreciated rapid and increasing sales of the NEW WILSON SEWING MACHINE.
 Please call and examine even if you do not wish to purchase.
 A full stock of Machine Twist Spool Cotton, Oil, Needles, etc., always on hand and for sale low.
DEACH & SUTHERLAND,
 353 Main Street, South of Union.
 64-65-67.

THE MODERN MUSE.
 "I wish to have a song to-night."
 "Well, grandma, with a smile,
 "Will my many guests to ease,
 "And thus the time beguile!"
 "Sing! without accompaniment!
 "Why, mother, how 'twould sound!
 "Like tinkling to the ground!"
 The patient mother smiled again,
 "And to a grandchild near,
 "Said, 'Let me hear your pretty voice,
 "Will you not sing, my dear?"
 "Oh, my mother is out of fix,
 "I've sung you oft to sleep,
 "And my many guests to ease,
 "With ditties like 'Bo peep.'"
 "Yes, I will sing, if Belle will play,"
 "The little fellow said—
 "But sister was not in the mood,
 "And hurried her to bed."
 Then grandma thought upon a time
 "Upon any of string."

POISONED.
Fatal Mistake of a Druggist's Clerk.
Unholy Death of Mrs. Colonel J. M. Thornburgh.
 From the Knoxville Press and Herald, Feb. 24th.
 We are called upon to chronicle one of the most melancholy events that ever saddened our community—the death, by narcotic poisoning, of Mrs. Addie Smith Thornburgh, wife of Col. J. M. Thornburgh, of this city.
 For some days past, Mrs. Thornburgh had been suffering moderately with slight intermittent fever, which disturbed her rest. On Tuesday she was visited by the family physician, Dr. John M. Boyd, and on Wednesday, upon calling again, he left a prescription designed to break up the recurring chilliness.
 The prescription was as follows:
 For Mrs. Thornburgh: R. Quinine, grs. V. Salicine, grs. XX. Syr. Ace. veic, q. s. f. M. Div. in Pills No. 12. S. Salicine Pills.
 Six to be taken by eight o'clock p. m.
 The interpretation of which in plain language is: "Take of quinine, five grains; of salicine, twenty grains; of syrup of gum arabic, a quantity sufficient to make a mass—divide into twelve pills and write on the label 'salicine pills.'"
 This prescription was sent to the drug store of Messrs. Heald & Locke, and filled by their prescription clerk, six pills were administered, as directed, six of them being taken by Mrs. T. before eight o'clock, Wednesday night. She having fallen asleep, Colonel Thornburgh retired about ten o'clock. At about twelve o'clock, she was awakened by the peculiar, stertorous breathing of her condition was as alarming one—Mrs. T., being in the early part of the evening spoken of the fact that the pills seemed to have morphine in them—she promptly sent for medical assistance, meanwhile, with remarkable presence of mind, resorting to artificial means she was kept alive through appliances and devices of his own, for three-quarters of an hour, and until Dr. Boyd arrived, at once concluded that she was the subject of narcotic poisoning. She was in an unconscious state, perfectly relaxed, the pupils of the eye contracted, temperature of the body cold, unable to breathe, except by means of artificial aid, which inability to breathe without assistance continued for five hours, and, in the opinion of the doctor, she would have died, without such assistance, at any time during the five hours.
 An hour after Dr. Boyd's arrival, Mrs. Thornburgh and Deacid had been summoned arrived. After daylight the efforts to restore life were more promising, and at several periods during the day gave some slight hope of recovery, though at no time were the physicians sanguine of conquering the fatal drug, but a temporary rally being succeeded by continued prostration. Such alternations continued until about a quarter past two o'clock, yesterday morning, when death closed the scene. We should have stated that Drs. Thornburgh and Roderfer, New Market—uncle and brother-in-law—who had been sent for, arrived by

the 1 o'clock train, Thursday, and were assigned to their attentions until the hour of death.
 Our community were shocked at the announcement yesterday morning of Mrs. Thornburgh's death and the painfulness of the intelligence was intensified when the melancholy cause of her death came to be understood. It was quite natural in the state of social excitement ensuing the announcement, various and confused rumors and versions of the affair were in circulation. In order that the history of the case may be correctly understood, we have prepared our report with strict reference to the authentic facts, as furnished by those best informed and authorized to give them.
 Upon examining the prescription files of Messrs. Heald & Locke, yesterday, the prescription of Dr. Boyd was found as above given, written in a legible hand-writing. Upon examining it, the clerk expressed a confidence that he had put into the preparation precisely what was called for and nothing else; and the proprietor, with a view of thorough examination, promptly set aside the two bottles, containing Quinine and Salicine, for chemical inspection—placing them at once in the vault of the Knoxville bank. Thereupon, the physicians in charge of the case called a conference of physicians for the purpose of ascertaining the chemical properties of the medicine administered. There were present in this conference at Dr. Boyd's office, Drs. Roderfer, Thornburgh, Boyd, Boynton, Deacid, Gurnis, James Rodgers, and Mr. Heald, of the firm of Heald & Locke. Six of the pills not having been taken and being still in the box, they were made the subject of careful analysis. The tests were variously repeated to the satisfaction of every one present. The result of each test was that morphine was a prominent ingredient of the pill; that the pill had not been compounded according to the prescription, and that the morphine in the pill, which had been substituted by mistake for quinine, was the cause of the narcotic poisoning and death.
 The conclusion as to the result of this dread mistake was that Mrs. Thornburgh had taken two grains and a half of morphine within three hours—enough to produce death.
 The bottles of quinine and salicine which had been placed in the bank were produced and their contents examined by the physicians. The drugs were found to be pure and incapable of producing the combination found in the pills. The tests were conclusive, therefore, that the prescription had not been filled according to its terms and directions.
Queening it in Society.
 A Washington correspondence of the Kansas City News has the following concerning a Kansas City woman who is now "queening it" in Washington society.
 Madame W—, well known in Kansas City as the proprietress of one of the most fashionable houses of ill fame, is here under an assumed name, and queening it in the best society with a grace and elegance that has won the credit of the most accomplished ladies of the French court. She is the chosen one of a prominent M. C., by whom she is introduced into society as his cousin, whom he has brought to Washington City to get a glimpse of life at the capital, and to do the honors as mistress of the elegant mansion he has rented during the session.
 She was at a party the other night, and a newspaper reporter was so smitten by the charms of her person and manner that in his next morning's paper he gushed forth in a quarter column of rhapsody upon the charming cousin of the honorable gentleman from—
 "An elaborate description of her toilette, which he said, was the most elegant and costly of any in the party."
 Charles B., who, you know, was always "fast" while at home, and knew her in Kansas City, called upon her the other afternoon, and found the house filled with distinguished company, whom Madame W. was entertaining with the grace and hospitality of a Duchess, seeming perfectly at home in her new position.
 Let it be known in every nook and corner, that he, who is in earnest in setting his face against those in power, and who boldly seeks to detect fraud and punish violations of law, is confronted by the powers that be with the prospect of the dungeon. Why, sir, I did not know that the administration was in such a desperate condition as that. They are developing very fast. How long will it be until you cannot get the right of manufacture and vend of steam, as promulgated by circular order from the Treasury Department, bearing date November 18th, 1871?
 And being the only Registering Gauge now manufactured,
 And offered to the public, filling the requirements of said laws and regulations, we, the undersigned, respectfully call your attention to the fact that we are the sole owners of the right to manufacture and vend said gauges, and are now ready to fill orders therefor in any required number and pressure. We warrant our gauges to be of superior workmanship, and to have been tested by a Standard Mercury Column before leaving the factory. This Gauge is specially adapted for application to all boilers in use for land purposes, it being the first invention in the history of the world brought out at any time for the purpose of registering steam, thus giving to all parties who are using steam for land purposes, not only protection to life, but absolute protection to property, affording positive knowledge as to whether their boiler or excessive pressure has at any time been strained, which no Steam Gauge now in use except this has been able to give. Parties who are using steam can readily appreciate its importance, and we cordially invite all such to call upon our office, who will be happy to show them the Register and its operation. In proof of their merit, we insert the following testimony:
 WASHINGTON, D. C., March 22, 1870.
 Rear Admiral John A. Dahlgren, U. S. N., Commandant:
 Sir—In obedience to your instructions of the 13th inst., I have examined and tested the Registering Steam Gauges invented by Mr. E. Clark, and respectfully report, that it is entirely reliable in its construction, and that in its action, reliable in its indications, and liable to little or no derangement.
 I think the use contemplated for the purpose intended to be accomplished.
 Very respectfully, your obedient servant,

How Germany Prevents Railroad Accidents.
 That most railway accidents, and especially those which are the result of collision, can be avoided by proper care and foresight is undeniable. This is shown by the comparative exemption from accident which some railroads in this country, conducted on proper principles, enjoy. Even in regard to the breaking of a rail, as in the Lehigh accident, which the country at large has not been able to avoid, it is said that in Germany an accident has never occurred from the breaking of a rail. The New York Evening Post says that not a person in that country has lost his life nor a person been mutilated from this cause since steam railways have been running on iron ways. The reason is plain. It is determined by scientific experiment how long iron will resist, on the average, the beating of wheels, and then the law requires the railroad companies to put down the rails periodically, whether those in use exhibit signs of weakness or not. While this involves expense it is so managed as to be gradually distributed over a period of years, a small part of the road being renewed each year, until the whole is completed within the given time. Here, on the contrary, upon many railroad lines, little attention is given to the selection of rails, and loss to their renewal at certain periods. Few companies incur the expense of substituting steel for iron rails, though the former are far more durable. In like manner the same false economy in all that would give increased security to the public is one of the chief causes of the frightful perils on railway traveling.

A Dungeon for Schurz and Sumner.
 From the speech of Hon. Carl Schurz.
 Ah! sir, it is a glorious spectacle. Here stands two American senators, not entirely unknown to the country, whose record is not entirely devoid of patriotism and service, and whose only aim is to investigate the abuses and the violation of laws and have them punished. Those senators are met here by one of the spokesmen of the administration, flourishing a statute in his hand, threatening them with fine and imprisonment.
 Let it be known in every nook and corner, that he, who is in earnest in setting his face against those in power, and who boldly seeks to detect fraud and punish violations of law, is confronted by the powers that be with the prospect of the dungeon. Why, sir, I did not know that the administration was in such a desperate condition as that. They are developing very fast. How long will it be until you cannot get the right of manufacture and vend of steam, as promulgated by circular order from the Treasury Department, bearing date November 18th, 1871?
 And being the only Registering Gauge now manufactured,
 And offered to the public, filling the requirements of said laws and regulations, we, the undersigned, respectfully call your attention to the fact that we are the sole owners of the right to manufacture and vend said gauges, and are now ready to fill orders therefor in any required number and pressure. A Tunnel Under the Snow.
 From the Central City Herald, Feb. 15th.
 A tunnel of snow partially surrounds the stamp mill above Nevada, through which all quartz conveyed to the mill passes. This mill, which is now in full blast, is located in the ravine through which the upper portion of Nevada flows, which, owing to the abrupt hills on either side, is very favorable for the accumulation of snow. Early in December immense drifts of the icy element blocked up the only road that encircles or approaches the mill to the depth of fifteen or twenty feet, so that tunneling was resorted to. For some time it was impossible to reach the mill with quartz excavated and re-excavated as one snow succeeded another, now affords an excellent roadway, kept in good traveling order and of sufficient length to avoid trouble from the drifting snow. Through this six foot smooth bore, a comparison of the distance of one hundred and forty feet, a distance almost a half circle in their course to the mill side. It is so firm and substantial that it bids fair to hold good for months to come.
 The practical value of the signal service has been demonstrated by the result accomplished during the first year in the way of protection to life and property at sea. The last year was noted for the storms and gales unusually severe. Nevertheless, a comparison of two months of November and December of 1870 and 1871, shows a falling off of marine disasters from 366 in 1870 to 233 in 1871. The number of men lost in the same time diminished from 97 to 23. The gain is principally in the classes of disaster against which the signal bureau offers protection.
 The Jansenville (Wis.) Gazette hears from a rural village of the case of a woman who gave birth to triplets just after recovering from the small-pox. All the women in that neighborhood are getting vaccinated again.

Old Bill's Account of His Visit to Nevada.
 From the Titiville (Pa.) Herald, Feb. 12th.
 Old Bill informs us that he passed a very pleasant time at Governor Seward's house at Auburn, N. Y., on Wednesday last, on the occasion of his concert in that city, and that he found the veteran statesman in remarkably good health, and engaged with great order in preparing reminiscences of his recent grand journey round the globe. A representative of a well-known Eastern publishing house was on the occasion with reference to the illustrations which are to accompany the interesting adventures in either hemisphere, in tropical Mexico, in ice-bound Alaska, among the Celestials and the Orientals, as well as European nations.
 Old Bill pronounces the mind of the sage of Auburn as active, profound and brilliant as ever, and that his intellect always attributed to a moderately bright man who is habitually drunk. Such a man, such a mathematician, such a poet he would be, if he were only sober; and then he is sure to be the most generous, magnanimous, friendly soul, conscientiously honorable, if he were not so conscientiously drunk. I suppose it is now notorious that the most brilliant and promising men have been lost to the world in this way. It is sometimes al-

A Charitable World.
 It is a temptation to a temperate man to become a pot, to bear what is almost what veritability, what genius is almost always attributed to a moderately bright man who is habitually drunk. Such a man, such a mathematician, such a poet he would be, if he were only sober; and then he is sure to be the most generous, magnanimous, friendly soul, conscientiously honorable, if he were not so conscientiously drunk. I suppose it is now notorious that the most brilliant and promising men have been lost to the world in this way. It is sometimes al-

STEAM GAUGE.
To Owners and Captains of Steam Vessels, and all others interested in Steam Gauges.
CLARK STEAM REGISTERING GAUGE
HAVING BEEN THOROUGHLY TESTED and approved by the United States Board of Supervising Inspectors for application to Steam Vessels, in conformity with the rules and regulations before them for the carrying out of the Steamboat Law, requiring the application of Steam Registering Gauges to vessels propelled by steam, we warrant our gauges to be of superior workmanship, and to have been tested by a Standard Mercury Column before leaving the factory. This Gauge is specially adapted for application to all boilers in use for land purposes, it being the first invention in the history of the world brought out at any time for the purpose of registering steam, thus giving to all parties who are using steam for land purposes, not only protection to life, but absolute protection to property, affording positive knowledge as to whether their boiler or excessive pressure has at any time been strained, which no Steam Gauge now in use except this has been able to give. Parties who are using steam can readily appreciate its importance, and we cordially invite all such to call upon our office, who will be happy to show them the Register and its operation. In proof of their merit, we insert the following testimony:
 WASHINGTON, D. C., March 22, 1870.
 Rear Admiral John A. Dahlgren, U. S. N., Commandant:
 Sir—In obedience to your instructions of the 13th inst., I have examined and tested the Registering Steam Gauges invented by Mr. E. Clark, and respectfully report, that it is entirely reliable in its construction, and that in its action, reliable in its indications, and liable to little or no derangement.
 I think the use contemplated for the purpose intended to be accomplished.
 Very respectfully, your obedient servant,
 Signed: CHAS. H. LORING,
 Chief Engineer, U. S. N.
 Respectfully
 WHITE & PAYNE,
 JEWELL & BACHUS,
 Louisville, Ky.,
