The habit of administering quinine in powerful doses, as an antidote to malarial miasmas, was once dangerously common. Happily this practice has undergone a wise reform. Not only the public, but professional men have adopted, not wholly of course, but largely, Hostetter's Stomach Bitters as a safe botanic substitute for the poisonous alkaloid. The consequences of this change are most important. Now fever and ague sufferers are cured—formerly their complaints were only for the time relieved, or half-cured—the remedy eventually failing to produce any appreciable effect. Except the doses were increased. A course of the Bitters, were persistently followed, breaks up the worst attacks and prevents their return. The preference in favor of this striking specific and household medicine is of no ambiguous character, but positive and satisfactory, and the sources whence it proceeds are very numerous.

A Question

Often asked, but seldom answered satisfactorily: "Is there a remedy known to the medical profession that will allay the suffering peculiar to women who are subject to Dysmenorrhoea and its attendant discomforts?" Ladies! If you have not tried it, do so AT ONCE. There is relief for you! It has been found in Tongaline.

Read what an eminent physician has to say upon the subject: "I have derived particularly gratifying results from the use of Tongaline in cases of Dysmenorrhoea. In the case of a lady of rheumatic condition, and a chronic sufferer from this disease, who had been driven almost to the verge of insanity by her monthly sufferings, the action has been most satisfactory. It relieved her promptly, and she now passes the most tranquil periods with her little discomforts. I could mention other instances of a similar character, but this is a remarkable case." T. F.
