

THE FARM AND GARDEN.

The Winesap Apple is the True Fruit of Virginia Soil. A SPECIAL ARTICLE ON ITS CULTURE.

Mr. V. H. Rucker, who is an Extensive Grower, Gives Some Valuable Information—Success in Small Farms.

The following article, written specially for THE TIMES by Mr. V. H. Rucker, of Harris Creek, Amherst county, Va., contains the secret of apple culture in a nutshell. Mr. Rucker is the largest grower perhaps of winesap apples in Virginia, and his best authority on this subject in the State. His letter is not based on theory, but is written from actual experience as follows:

"Be sure you are right, then go ahead," is an old maxim accredited to Davy Crockett, and may do in the ordinary affairs of life very well, but in the horticultural world one might often arrive at the conclusion that he is absolutely sure of nothing.

I think your idea of getting the experience of men who have tried the horticultural road and know well its devious windings, its prospective ailments and its deceptive attractions, is a good one, for there surely can be no other enterprise or business so deceptive in appearance to a man of specialities when he first enters upon the work.

When I first took the Horticultural Farm at the close of the war, knowing my labor for a long time would be very unreliable and hard to control, I went into it with a zest, the ardor of which has not yet entirely abated, but to be candid, I have received many an eye-opener.

I thought the most approved works on fruit culture, especially the apple, I took several horticultural periodicals, all of which were written and edited at the North and for the North.

I read of the great success of the Ruper in Massachusetts, of the Baldwin, the Spy, the King, the Paradise and other varieties in New York and other Northern States. So I reasoned if they can grow these varieties, laboring under so many disadvantages of climate and soil, why I can grow them too.

It is highly commendable in Judge Sener and every one else to bestow marked honor and affection upon the memory and the remains of the Hon. Robert M. T. Hunter. Being myself a native of Essex, I am proud of having been the fellow-countryman of such a distinguished and faithful son of Virginia, and I rejoice in every demonstration of respect that can be made in his honor.

An agricultural expert, who has tried both ways, says it is better to have a cow give 200 pounds of butter for five years and die on your hands than to give 200 pounds of milk for ten years and then make 1,500 pounds of old cow feed.

HON. R. M. T. HUNTER. A Mistake in Ascribing to Him the Authorship of the Warehouse System.

It is highly commendable in Judge Sener and every one else to bestow marked honor and affection upon the memory and the remains of the Hon. Robert M. T. Hunter. Being myself a native of Essex, I am proud of having been the fellow-countryman of such a distinguished and faithful son of Virginia, and I rejoice in every demonstration of respect that can be made in his honor.

It is, of course, considerable task to cut a large acreage of corn and for this reason more or less is left standing, and feed that

otherwise could be used to a great advantage is wasted.

After the grain begins to ripen well is a good time to cut fodder, and the better will be the quality for feed. If it cannot be hauled in soon after cutting and stored under a good shelter it will be best to put up in good sized shocks, as there will be a lesser per cent. exposed to the element.

Helping Hints. Ten head of young cattle, well fed and kept comfortably during winter, will bring a better return than twenty left to shift for themselves.

When you can't plow corn or thresh wheat, it would be a paying job to haul the big tire of manure away from your barn lot and scatter it on weak spots.

Better sell a part of the stock now than to be obliged to sell all half fat a little later.

Change the quantity of seed wheat of the time of sowing and the condition of the soil. Do not sell all of the best animals on the farm and then expect your stock to improve by breeding.

Bad grains and hay are dear at any price, and should not be fed to your horse simply because they are cheap.

One item in cutting ahead of time before feeding is the saving of waste. Adding a little bran improves the value as a ration.

Between marketing, evaporating, making into cider for vinegar and feeding to stock, no fruit should be allowed to go to waste.

Do not expect to rot under the trees, when it is possible to avoid it.

"The best sign" of a good cow as a milker is a good milk and butter record for a year or more, but shiftless farmers are apt to get it.

An agricultural expert, who has tried both ways, says it is better to have a cow give 200 pounds of butter for five years and die on your hands than to give 200 pounds of milk for ten years and then make 1,500 pounds of old cow feed.

ADDRESS ON "THE HORSE"

Delivered at a Meeting of Farmers by Captain Oris A. Brown.

CROP OF COLTS TO BE SOLD VERY SHORT

Not Much Difference Between the Cost of Producing a Horse and a Cow—Invitation to Cape Charles.

At a recent large meeting of farmers, Captain Oris A. Brown, of Cape Charles, Va., who is the manager of the largest cultivated farm in the State, made the following interesting address on the horse and said:

This is a broad question and can only be considered in a general way. The advantages of the horse are published daily, and the large prices obtained for good animals is a fact well known to all readers of the papers.

Certain sections of the country have, however, made great reputation for their horses, and especially the idea has gone abroad that they are superior to all others in producing valuable horses. The minds of the people have been directed that way so long that it is now accepted by many as a fact, a very erroneous idea.

A SAD CASE.

A Terrible Fate All Can Escape.

A woman was seen to spring from a pier. Upon recovery of the body it was found to be a young woman who had been suffering from nervous weakness and prostration, and who, despondent and despairing of a cure, had committed suicide.

Thousands of weak, nervous and despairing women lead a life of utter mental and physical misery caused by weakened vitality, shattered nerves, malaria and exhausted strength.

To such we would say, despair is foolish and unnecessary. All such cases can be cured by the use of the great nerve, brain and blood invigorator, Dr. Greene's Nervine. It is purely vegetable and harmless, and costs but \$1.00 of druggists. Use it, you who are in hopeless despair of a cure, and it will give you a new nerve, a new color, a new life.

"I had terrible headaches for thirty years. They got so bad I felt that I should go insane, and made my husband promise not to put me in an asylum. I took Dr. Greene's Nervine, and now have no headache, sleep and eat well, am pure nervous, my kidneys are healthy and blood pure. I was saved from that terrible fate, insanity or prostration, by this wonderful remedy, Dr. Greene's Nervine."

Mrs. JENNIE ANTHONY, 21 West Green Street, Lynn, Mass.

Dr. Greene, the successful specialist, in curing all forms of nervous and chronic diseases, 35 West Fourteenth Street, New York, can be consulted personally or by letter. Call or write him about your case, or send for symptom blank to fill out and a letter, fully explaining your case giving advice, etc., will be returned free.
