

THE DESERTED HOUSE.

BY MISS REAPROD.
The sunbeams fall in amber here,
Across the green and swaying grass,

MISCELLANY.

Where Wild Ponies Grow.

When a Baltimorean is told that wild ponies can be found within ten miles of the eastern coast of Maryland, he is likely to be incredulous.

A Wonderful Enterprise.

The British Anti-Tobacco Association, which has been formed by some of the most intelligent and energetic men of the country, is now engaged in a most interesting and important enterprise.

Helping a Boy.

A New York party named Reynolds, who has been engaged in the summer at Danbury, says the New York, was at the upper end of Deer Hill avenue, striving for his health, yesterday morning, when he observed a boy trying to pull a kite from an apple tree.

Bliss About Work.

It may be seen the early part of the month—the earlier the better. What may be harvested in the fall, whenever the land is dry, with much benefit.

Muscular Strength of Insects.

M. Felix Platani, a young Belgian naturalist, and a son of the celebrated physician, has lately tried some very delicate experiments to measure the muscular strength of insects.

The Frost and the Fever.

The coming of the frost at Memphis is thus described: "Before daybreak, heavily attired men and women, with semi-nude children in their arms, were out in the streets breathing the precious air of the purifying frost.

Boxing Ears.

"Children's ears should never be boxed," so writes an eminent surgeon in the Popular Science Monthly.

Fall of an Aerolite.

Mention was made a short time since of the fall of this meteorite in the lower part of the State.

You Ought to Know.

Almost all of us can remember the friends who upon various occasions have said to us: "Now you ought to know."

Art Among the Birds.

The best evidence, says Mr. Darwin, of a taste for the beautiful is afforded by the three genera of Australian bowers.

WHAT CAUSES BALDNESS.

Dr. Dio Lewis tells a good many odd truths in a fresh and interesting manner. He has recently pointed out the results of the habit, so common among business men, of keeping the head constantly covered while about their business.

THE POLAR BEAR.

The bear of the Arctic regions does not hug like other bears, but bites at his opponent; and he declines to eat his captive milk life quite extinct.

Boxing Ears.

"Children's ears should never be boxed," so writes an eminent surgeon in the Popular Science Monthly.

The established gradations of the professions would make the teacher or the "sciences" of teaching, (pedagogy) the profession in its nature. The importance, however, with the nature, the design, and the responsibilities of the teaching, imperatively define it to be the first order. There are various classes of teachers, each of which have equally important duties to perform.

A Romantic Young Lady Elopes with a Pirate Brave.

The Virginia (Norfolk) Enterprise. A few days since the daughter of a well-to-do ranchman, residing on the head waters of the Walker River, a handsome and well educated young lady about sixteen or seventeen years of age, eloped with a young man of the name of Walker, who had been working about her father's place.

How to Fool Rats.

Let us take the case of a house badly infested with rats, says the Rural New Yorker. How shall we get rid of them? Of course, if they come from some public sewer or other drain, the supply is probably unlimited, and the first thing must be to cut off the access of all outsiders. But if we are troubled by none but natives, it will not require much skill to capture every one of them—old, coming fellows and all.

Build Good Barns.

A writer in the Dunes Farmer, among other things, and concerning the advantages of having good barns, remarks that he believes it is safe to say that money invested in well constructed barns pays from twenty to fifty per cent. every year, and that all will agree to the statement when we take into consideration the fact that the time to build platforms and fence stacks every year, the increased expense of having the year per cent. in loss of hay, the half ton saved on wintering over ox or cow, and the small proportion as we feed young, or old animals, the increased risk of losing stock, the increased cost of doing chores, the advantage of having stock fixings constantly in your way, the continual exposure of all your stock to all the winds and storms, and all that is liable to great damage, while being fed out.

THE POLAR BEAR.

The bear of the Arctic regions does not hug like other bears, but bites at his opponent; and he declines to eat his captive milk life quite extinct. Like a cat, he plays with his victim. Among the Esquimaux of Greenland, he plays strange pranks; often creeping upon the hunter while he is sleeping, and tapping him on the shoulder with his powerful paw. It is then the unfortunate man's cue to "feign dead," so that when brain retreats a few paces to enjoy the prospect of his intended meal, the gun can be got ready before he returns to the attack.
