LATE BLIGHT OF POTATOES

Has Appeared--Second Warning to Potato Growers.

The late blight or rot fungus of potatoes, Phytophthora, has appeared about Wooster, Ohio, following the rainy weather.

The late blight and rot may be prevented by thorough spraying with Bordeaux mixture, made of 4 lbs. blue vitrol and 4 to 5 lbs. of lime in 50 gallons of water.

Such spraying should be repeated at 7 to 8 day intervals till crop is mature.

Some growers gained one third to one half increase of crop by spraying from this time forward, in 1905.

Inquiries and applications for bulletins, spray calendar, etc. may be addressed to the Ohio Experiment Station, Wooster, Ohio.

The company is holding up Hillsboro's end of the regiment in deportment, attention to duty and familiarity with military discipline.
