The Factory Behind the Food

More than forty different kinds of corn flakes were prepared experimentally before **New Post Toasties** were finally developed to perfection. As a distinguishing feature, note the tiny bubbles on each flake—raised by the quick, intense heat of a new, patented process of manufacture.

New Post Toasties are the first corn flakes with a self-developed flavour—the full, true flavour of choice white Indian Corn—unlike common "corn flakes" that depend largely on cream and sugar for their palatability.

Try a handful dry—this simple test will demonstrate the delicious new flavour. But the flakes are usually served with cream or rich milk.

New Post Toasties do not "chaff" or crumble in the package, and they "stand up" when cream or milk is added. They're untouched by human hands and put up in moisture-proof packages to preserve their oven freshness until served.

Try some of the **New Post Toasties** At your grocer's now.
