Raise double weight chicks

Chick growth depends partly on natural vigor due to mating stock and normal incubation, and largely on

Balanced Feed

which perfectly nourishes every part of the growing chick—flesh, blood, bones and feathers. Grain alone is not balanced since it is largely lacking in proteins—the blood, flesh and feather forming elements. Grain fed chicks frequently grow slowly and feather out poorly. Balance the ideal grain ration, Purina Chick Feed with

Purina Chicken Chowder

and chicks will develop twice as fast. If Purina Chicken Chowder fed as directed doesn't produce this result at six weeks, your money will be refunded. Such a guarantee merits a further investigation and a fair trial. Call today for your checkerboard sack.
