How To Prevent Acid Stomachs And Food Fermentation

By a Stomach Specialist As a specialist who has spent many years in the study of the human stomach troubles, I have been forced to the conclusion that most people who complain of stomach troubles are actually healthy and normal. The real trouble, that which causes all the pain, acidity, is acid in the stomach, usually due to, or aggravated by, food fermentation. Acid irritates the delicate lining of the stomach and food fermentation causes wind which distends the stomach normally, causing the full bloated feeling. Thus both acid and fermentation interfere with and retard the process of digestion. The stomach is usually healthy and normal, but irritated almost past endurance by these foreign elements—acid and wind. In all such cases—and they comprise over 90 per cent. of all stomach difficulties—the first and only step necessary is to neutralize the acid and stop the fermentation by taking in a little amount of magnesia immediately after eating, a teaspoonful of bisulphated magnesia, which is doubtless the best and only really effective stomach and food corrective known. The acid will be neutralized and the fermentation stopped almost instantly, and your stomach will at once proceed to digest the food in a healthy, normal manner. Be sure to ask your druggist for the bisulphated magnesia, as I have found other forms utterly lacking in its peculiarly valuable properties.—P. J. G.—Advertisement.
