Fighting Disease Germs

There is a popular idea that most sickness is caused by a germ of the disease finding entrance to our bodies through the food we eat, the water or milk we drink or the air we breathe. This is true as far as it goes, but it is also true that disease germs are entering our bodies every day without causing disease.

To Put On Flesh And Increase Weight

A Physician's Advice Most thin people eat from four to six pounds of good solid fat-making food every day and still do not increase in weight one ounce, while on the other hand many of the plump, chunky folk eat very lightly and keep gaining all the time. It's all a matter of this: this is the nature of the individual, it isn't Nature's way at all.

Thin people stay thin because their powers of assimilation are defective. They absorb just enough of the food they eat to maintain life and a semblance of health and strength. Stuffed won't help them. A dozen meals a day won't make them gain a single "stay there" pound. All the fat-producing elements of their food just stay in the intestines until they pass through the body as waste. What such people need is something that will prepare these fatty food elements so that their blood can absorb them and deposit them all about the body—something, too, that will multiply their red blood corpuscles and increase their blood's carrying power.

For such a condition I always recommend eating a Sargol tablet with every meal. Sargol is not, as some believe, a patented drug, but is a scientific combination of six of the most effective and powerful flesh building elements known to chemistry. It is absolutely harmless, yet wonderfully effective and a single tablet eaten with each meal often has the effect of increasing the weight of a thin man or woman from three to five pounds a week. Sargol is sold by Geo. A. Gorges and other good druggists everywhere on a positive guarantee of weight increase or money back.—Advertisement.
